3.1 Configure Extractor Settings..... 8

3.2 Maintain Document No. on Freight Documents 9

1. ABOUT THIS DOCUMENT

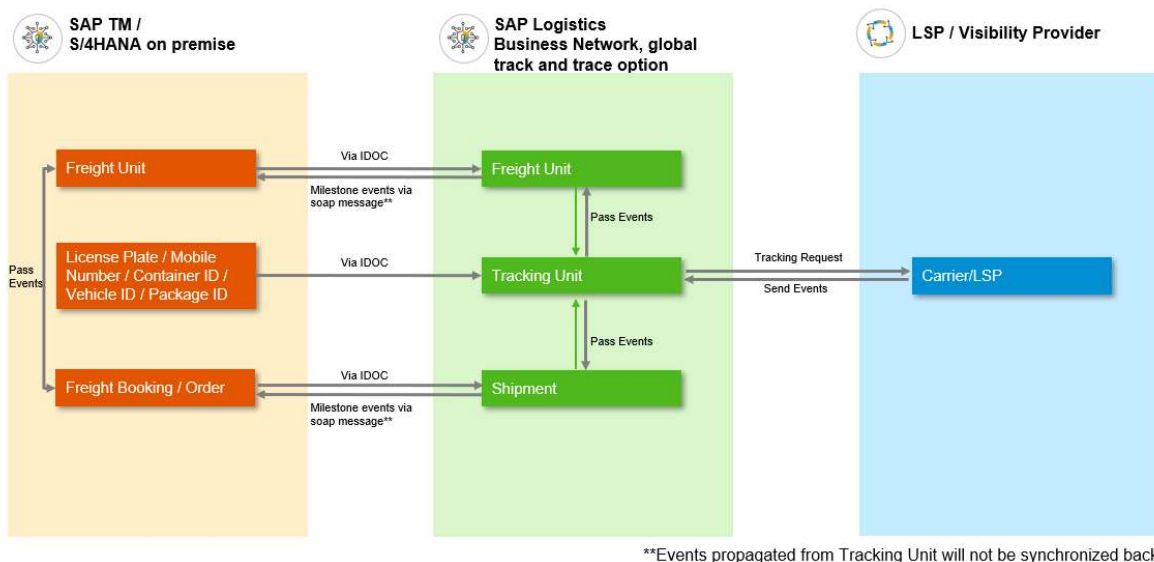

This implementation guide describes how to configure the extractors and maintain freight documents in SAP TM for different tracking scenarios. The successful configuration does not indicate that the end-to-end tracking is enabled. To achieve that, you might also need support from visibility providers or logistics service providers.

2. TRACKING VIA TRACKING UNIT

In the TM scenario, you can track the shipments and freight units via tracking unit. The tracking unit is introduced as a standard tracked process in the GTT system, referring to the tracked objects that will be sent to visibility providers or logistics service providers for tracking the shipments and freight units, such as license plate, container ID, external package ID, etc. Both freight unit and freight order/freight booking observe the tracking unit. The process integration flow is as follows:

TM Scenario

Process integration

To support this tracking scenario, you need to configure extractor settings and maintain tracking objects information on freight documents in SAP TM.

Prerequisite

Before you can maintain tracked objects information on freight documents in SAP TM, you must introduce new text types **CONT**, **MOBL** and **EPKG**. To do so, you must perform the following:

- Navigate to the **Text Type** section in **Customizing for Cross-Application Components**, under **Processes and Tools for Enterprise Applications > Reusable Objects and Functions for BOPF Environment > Dependent Object Text Collection > Maintain text Schema**.

b. Create entries with the **Text Type** and **Description** as follows:

Text Type	Description
CONT	Container ID
MOBL	Mobile Phone
EPKG	External Package ID

c. Navigate to the **Text Schema** section. Create a new text schema "TORITM" with the description "TOR Item Text Schema". Select the text schema "TORITM" and double click on 'Assign Text Schema to BO and Node'. Create a new entry as follows:

Business Object Name	BO Node Name
/SCMTMS/TOR	ITEM_TR

d. Select the **DEFAULT** text schema for **CONT** and **MOBL** text types, and **TORITM** text schema for **EPKG** text type.

e. Navigate to the **Text Type to Text Schema Assignment** section.

f. Check if you have assigned the text type **CONT** and **MOBL** to the **DEFAULT** text schema, and **EPKG** to the **TORITM** text schema. If they are not yet assigned, assign them with the following attributes:

Deselect the following checkboxes:

- Mandatory
- Access Seq
- Reference
- Exit Class
- Internal
- Lang. Text

g. Save your entries.

2.1 FTL/LTL Tracking

- Configure Extractor Settings
 - Enter the T-code "ZGTT_TRACK_CONF".
 - Set "Maintain Tracked Objects on Freight Order/Freight Booking" for relevant freight unit and freight order document types.

<

<input type="checkbox"/>		

- Maintain Tracked Objects Information on Freight Order

You can do either of the following:

- In the **Registration Country/Region No.** field of the **General Data** tab, fill in the license plate.
- In the **Content** column of the **Notes** tab, fill in the mobile number.

Note:

If multiple packages are assigned to one freight unit, only when all packages are completed, the freight unit is set to “Completed” and then impacts the status of the relevant delivery items.

2.3 Ocean Tracking

There are three options:

Option One: If one freight booking only has one container ID or one freight booking has multiple container IDs and you do not know which freight unit is assigned to which container, do the following:

- Configure Extractor Settings
 - Enter the T-code “ZGTT_TRACK_CONF”.
 - Set “Maintain Tracked Objects Information on Freight Order/Freight Booking” for relevant freight unit and freight order document type.

SAP Display View "GTT Tracking Scenario Configuration Table"

Option three (Recommended): If you use the container unit to consolidate freight units in SAP TM, do the following:

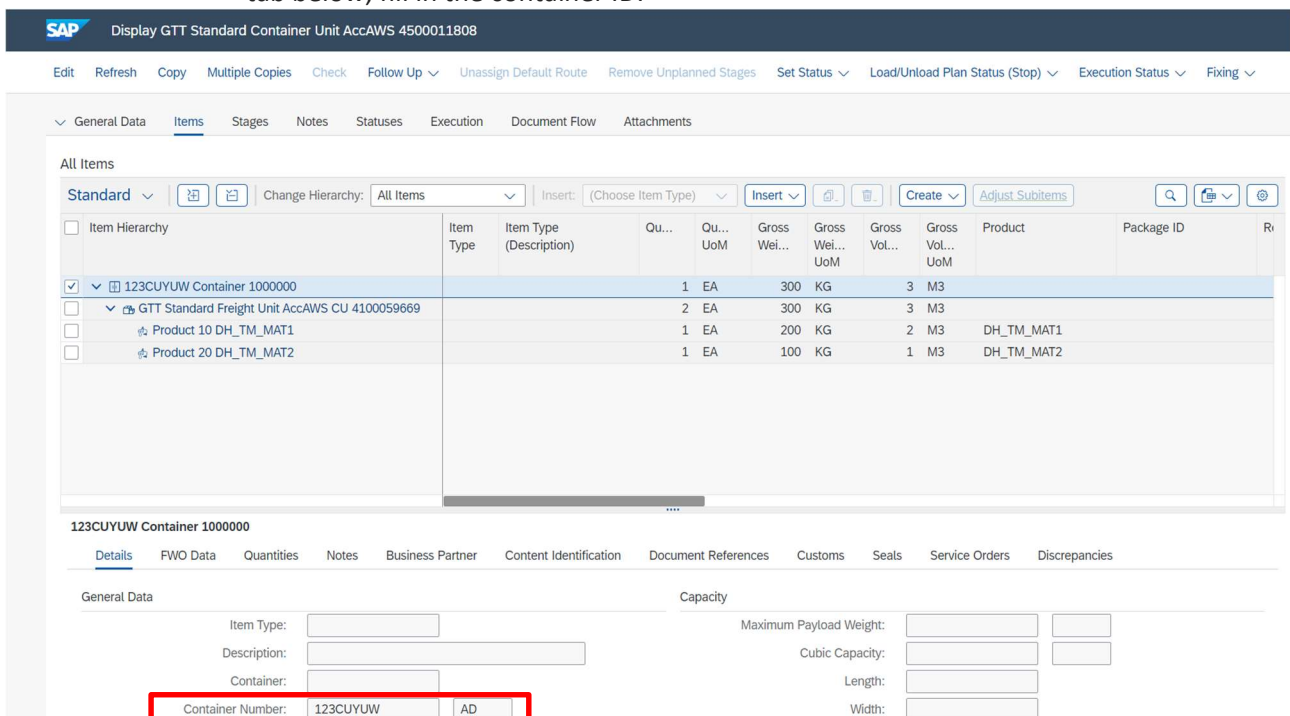

- Configure Extractor Settings
 - Set “Maintain Tracked Objects on Container Unit” for relevant freight unit, container unit and freight order document types.

The screenshot shows the SAP Display View interface for the GTT Tracking Scenario Configuration Table. The table has two columns: 'Doc. Type' and 'Scenario'. There are three rows, each with a checkbox in the 'Doc. Type' column and a dropdown arrow in the 'Scenario' column.

Doc. Type	Scenario

3. TRACKING VIA REFERENCE DOCUMENT (LEGACY VERSION)

You can still track the shipments and freight units via carrier reference document, such as Bill of Lading, Master Bill of Lading, Master Airway Bill, Reference number of Carrier. In this way, the shipment will be sent to visibility providers. The process integration flow is as follows:

TM Scenario

Process integration

To support this tracking scenario, you need to configure extractor settings and maintain reference document information on freight documents in SAP TM as follows:

3.1 Configure Extractor Settings

By default, the freight unit and the freight order are tracked via reference document. In this case, you do not need to configure the extractor settings. But you can still set "Maintain Reference Document on Freight Order/Booking" for relevant freight unit and freight order document types.

GTT Tracking Scenario Configuration Table	
Doc. Type	Scenario
<input type="checkbox"/> STR1	01 Maintain Reference Document on Freight Order/Freight Booking
<input type="checkbox"/> STU1	01 Maintain Reference Document on Freight Order/Freight Booking
<input type="checkbox"/>	

3.2 Maintain Document No. on Freight Documents

To maintain the Document No. on different freight documents in SAP TM, do the following:

- For FTL: on Freight Order, in the **Document References** tab, fill in the Bill of Lading (T50) on Freight Order.

The screenshot shows the SAP TM interface for editing a Standard Freight Order (AccAWS 6100068007). The 'Document References' tab is active, displaying a table with columns: Business Transaction Document ID, Document T... for Business Transaction, Document Type for Business Transaction (Desc.), Item, Business Transac... Docum..., BTD Item Type Code (Desc.), Business Transaction Document D..., and Issuing Party of Bus. Trans. Document. The row for 'SE202206080001' with document type 'T50' and description 'Bill of Lading' is highlighted with a red box.

Business Transaction Document ID	Document T... for Business Transaction	Document Type for Business Transaction (Desc.)	Item	Business Transac... Docum...	BTD Item Type Code (Desc.)	Business Transaction Document D...	Issuing Party of Bus. Trans. Document
80272564	73	Outbound Delivery					QW9CLNT170
65365	114	Sales Order					QW9CLNT170
SE202206080001	T50	Bill of Lading					

- For LTL: on Freight Order, in the **Document References** tab, fill in the Bill of Lading(T50) and Reference Number of Carrier (T67).

This screenshot is identical to the previous one, showing the 'Document References' tab for the same Freight Order. The row for 'SE202206080001' with document type 'T50' and description 'Bill of Lading' is highlighted with a red box.

This screenshot shows the 'Document References' tab for the same Freight Order. The row for 'PRO202206089001' with document type 'T67' and description 'Reference number of Carrier' is highlighted with a red box.
