# 1. PREREQUISITES

## 1.1 Check the SAP Product Version

Make sure that you have met the requirements for the product version mentioned in the “[Prerequisites](#)” section of *Basic Knowledge: Connect to SAP S/4HANA in How to Send Documents from SAP S/4HANA to SAP Business Network Global Track and Trace*. You can find this guide at <http://help.sap.com/gtt>.

The ABAP codes on Github to support fulfillment tracking apps for SAP Business Network Global Track and Trace shall be implemented in SAP S/4HANA 1909 SP03 on premise or higher. Please note that the codes are not validated in its lower version or other ECC series of products, so you might need to do further adaptation work or build your own extractor.

## 1.2 Log on the Development Client to Configure BTE

1.2.1 Ensure you have development access to the client for cross-client customizing and local development.

1.2.2 Log on to the client and enter transaction code (T-code): **BF11**.

1.2.3 Position on the Application ID: **PI-EM**. Check the field **Application Active**.

Appl.	A	Text
<input type="checkbox"/> PI-EM	<input checked="" type="checkbox"/>	SAP Event Manager Integration
<input type="checkbox"/> PIX	<input checked="" type="checkbox"/>	PIX Payment
<input type="checkbox"/> PM	<input checked="" type="checkbox"/>	Instandhaltung
<input type="checkbox"/> PM-BW	<input checked="" type="checkbox"/>	Instandhaltung-BW
<input type="checkbox"/> PM-EQM	<input checked="" type="checkbox"/>	Instandhaltung, Equipment

1.2.4 Click **Save**.

## 2. DOWNLOAD ABAP CODE FROM GITHUB

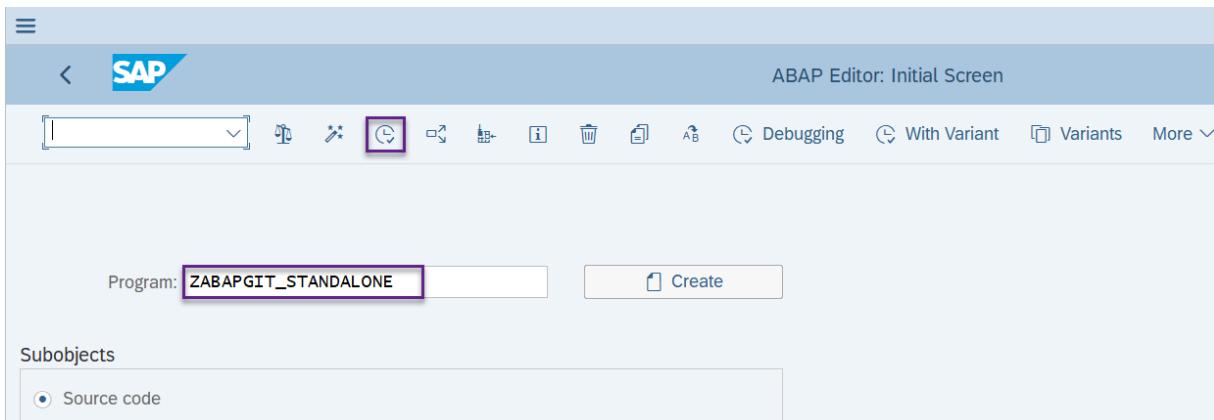

### 2.1 Initial Download ABAP Code from GitHub

#### 2.1.1 Install ABAPGit

You need to install ABAPGit before downloading the codes from GitHub. To install ABAPGit, follow the instructions on <https://docs.abapgit.org/user-guide/getting-started/install.html>. Make sure you **Install the standalone version** in your dev system. When installation is complete, a new report is created, **ZABAPGIT\_STANDALONE**.

#### 2.1.2 Download ABAP Code from GitHub

2.1.2.1 Enter T-code **SE38** and fill in the report name from [2.1.1](#), **ZABAPGIT\_STANDALONE**. Click **Execute** to run the report.

2.1.2.2 Click **New Online** to download the code.

A screenshot of the abapGit application's "Tutorial" section. At the top, there's a navigation bar with links like "Repository List", "New Online" (which is highlighted with a purple border), "New Offline", "Settings", and a help icon. The main content area has sections for "Online repositories" and "Offline repositories", each with a bulleted list of instructions. Below that is a "Repository list and favorites" section with its own list of instructions. A sidebar on the left shows a tree view of repository branches.

2.1.2.3 Fill in the **Git Repository URL**.

<https://github.com/SAP-samples/logistics-business-network-gtt-standardapps-samples.git>

2.1.2.4 Fill in the **Package** where you want to create the new ABAP code. If the package does not exist yet, click **Create package** to create it. Set **Full** for **Folder Logic**. Click **Clone Online Repo** to download the code.

**abapGit**

### 2.1.2.7 After you download the code, you can check it with T-code SE80.

## 2.2 Update ABAP Code from GitHub

In each release, there are some changes in the public sample codes. To update your local sample codes of Fulfillment Tracking apps after a future release, do the following:

### 2.2.1 Update ABAP Code from GitHub

2.2.1.1 Enter T-code SE38 and fill in the report name **ZABAPGIT\_STANDALONE**. Click the **Execute** icon to run the report.

The screenshot shows the SAP ABAP Editor: Initial Screen with the following details:

- Toolbar:** SAP logo, Back, Forward, Save, Open, Delete, Insert, Copy, Paste, Debugging, With Variant, Variants, More
- Program Input:** Program: ZABAPGIT\_STANDALONE
- Create Button:** Create
- Subobjects:** Source code (selected), Variants, Attributes, Text elements, Documentation

2.2.1.2 To access the Fulfillment Tracking apps' repository, click the button.

2.2.1.3 Click **Pull** to pull down the latest version code.

### 3. SAP S/4HANA INTEGRATION CONFIGURATION OPTION 1 (IMPORT BC SET + MANUAL CONFIGURATION)

#### Prerequisites:

- For this option, you must establish the system environment WITHOUT a production client for preparation. If you try to import the BC set into the system with a production client, an error will pop up.

Performance Assistant

**BC Sets cannot be activated in production systems; see the long text**

Message no. SCPR229

**Diagnosis**

You tried to activate BC Sets in a system with at least one production client. This is not allowed. You can only activate Business Configuration Sets in systems with no production client.

**System Response**

The procedure was cancelled. No data was written into customizing tables.

**Procedure**

Activate the BC Set in a test system.

- You must maintain the business process types used for SAP Business Network Global Track and Trace correctly. To do so, follow the steps below:
  - In **Display IMG** page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**.
  - Choose activity **Define Used Business Process Types, Appl. Object Types and Event Types**.
  - Choose **Define Used Business Process Types** and click **New Entries** to maintain business process type as follows:

Business Process Type	Update Mode	BPT Processing Mode	Description
ESC_DELIV	Update Task (V1)	Active	Delivery in SAP R/3 Enterprise
ESC_MATDOC	Update Task (V1)	Active	Material Document in SAP R/3 Enterprise
ESC_PURORD	Update Task (V1)	Active	Purchase Order in SAP R/3 Enterprise

ESC_SHIPMT	Update Task (V1)	Active	Shipment (SAP R/3 Enterprise)
ESC_SORDER	Update Task (V1)	Active	Sales Order in SAP R/3 Enterprise
TMS_TOR	Update Task (V1)	Active	Transportation Order (SAP TM)

### 3.1 Download BC Set from GitHub

3.1.1 Navigate to BC Set in [https://github.com/SAP-samples/logistics-business-network-gtt-standardapps-samples/blob/main/lbn-gtt-standard-app/BCset/ZGTT\\_CONF.bcs](https://github.com/SAP-samples/logistics-business-network-gtt-standardapps-samples/blob/main/lbn-gtt-standard-app/BCset/ZGTT_CONF.bcs).

3.1.2 Click on “Raw” button.

The screenshot shows a GitHub repository page for 'logistics-business-network-gtt-standardapps-samples'. The repository has 1067300 initial version and 0 contributors. The file 'ZGTT\_CONF.bcs' contains 1191 lines (1191 sloc) and 444 KB. The 'Raw' button is highlighted in purple at the bottom right of the code preview area.

3 BCSET ZGTT_CONF THV
4 OGRID /CUSTOMER/
5 COMPONENT SAP_BASIS
6 MINIRELEASE 750
7 MAXRELEASE *

```

3.1.3 Click **Save as** to save the configuration file to your local path.

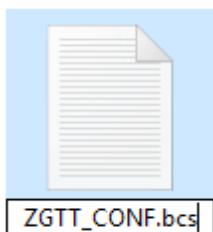

The screenshot shows the raw content of the ZGTT\_CONF.bcs file. The file is a BCS configuration file for SAP Business Network. It defines various components like BCSET, OGRID, and COMPONENT, along with their respective values. A 'Save as...' button is highlighted in purple at the bottom left of the code area.

```

3.1.4 Change file extension to “.bcs”.

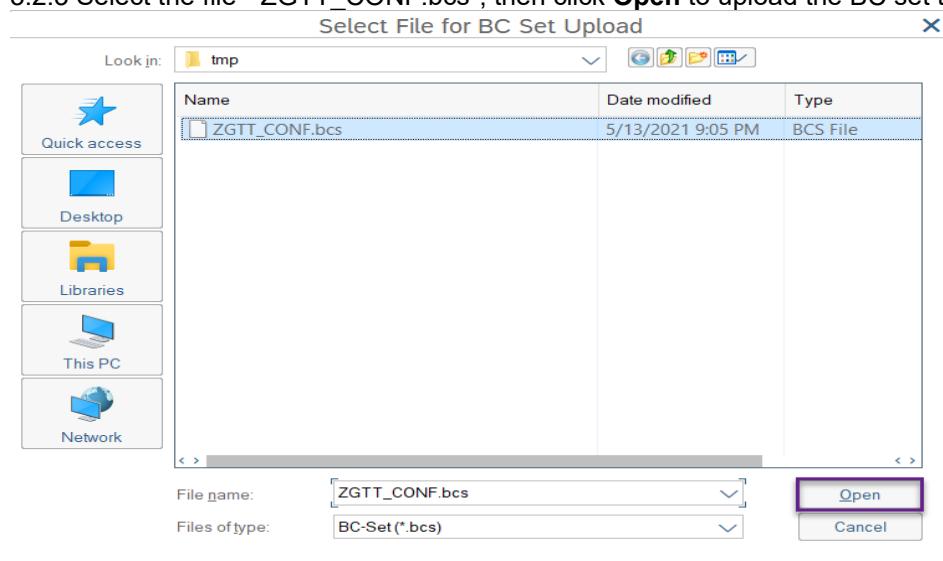

## 3.2 Import BC Set

3.2.1 From SAP Easy Access Menu, **Tools -> Customizing -> Business Configuration Sets -> Display and Maintain BC Sets** (Transaction Code SCPR3).

### 3.2.2 Select Upload BC Set.

3.2.3 Select the file " ZGTT\_CONF.bcs", then click **Open** to upload the BC set to your development system.

All of the configurations are loaded in the system.

The screenshot shows the SAP Business Configuration Sets: Change interface. The top bar displays the title "Business Configuration Sets: Change". The left sidebar has a "No Favorites List" and a search bar. The main area shows "BC Set ID: ZGTT\_CONF" and "Short Text: GTT Standard APP Configuration". A tree view under "GTT Standard APP Configuration (ZGTT\_CONF)" includes nodes for "Define Logical System", "Define Used Business Process Types, Appl. Object Ty", "Define SAP GTT Extraction Functions", and "Define CI Tenant for SAP GTT". To the right, there's a section titled "Tables and Views for Selected Customizing Object" showing "Table/View" and "Text" for "V\_TBDLS" (Logical Systems). Below this is a table titled "Data Records" with a single entry "GTTAPPLOGS" (Logical System for GTT Standard APP). A message bar at the bottom says "BC Set ZGTT\_CONF saved".

3.2.4 Click **Save** to save the BC Set.

BC Set ZGTT\_CONF saved

### 3.3 Activate BC Set

3.3.1 From SAP Easy Access Menu, **Tools** -> **Customizing** -> **Business Configuration Sets** -> **Activation of BC Sets** (Transaction Code SCPR20).

3.3.2 Enter the name of the BC Set and select **Activate**.

The screenshot shows the SAP Business Configuration Sets: Activation interface. The top bar displays the title "Business Configuration Sets: Activation". The main area has fields for "BC Set:" (containing "ZGTT\_CONF") and "Short Text:" (containing "GTT Standard APP Configuration"). A toolbar with various icons is visible above the input fields.

### 3.3.3 Provide a Workbench request and a Customizing request.

Prompt for Workbench request

Request: 900368 Workbench request

Short Description: Import GTT Standard APP configuration

Own Requests

Prompt for Customizing request

Request: 900372 Customizing request

3.3.4 Various activation options are available. Choose appropriate ones and click **Continue** to proceed with the activation.

The following message is displayed:

**Caution** You have started the BC Set activation If you continue, new data records will be created and/or existing ones overwritten."

3.3.5 BC Set is activated and BC set data is stored in the customization tables.

Activation ended with warning [View details](#)

3.3.6 Click **Activation Logs** to check the logs.

The screenshot shows two SAP application screens. The top screen is titled "Business Configuration Sets: Activation" and displays a search bar, toolbar, and a table with columns: BC Set, Object, Message Text, Key Field, and Infor... The BC Set is set to "ZGTT\_CONF". The bottom screen is titled "Business Configuration Sets: Activation Logs" and shows a detailed log for the activation of "ZGTT\_CONF" on 13.05.2021 at 15:27:29. The log table has columns: Type, BC Sets, Object, Message Text, Key Field, and Infor... The log entries include messages about activation of various objects like /SAPTRX/VC\_AOTYPE\_CTT, /SAPTRX/VC\_ASFUNC\_CTT, and /SAPTRX/V\_CTTSRV, as well as notices about user-defined languages and differences between BC set activation and table data.

#### Tips:

By default, the application log is activated for the imported configurations. If you want to stop recording the application log, refer to [Q8: How to deactivate or activate the application log?](#) for detailed instructions.

## 3.4 Define RFC Connection for SAP Business Network Global Track and Trace

3.4.1 Log on to the business client, enter T-code **SPRO** and then click **SAP Reference IMG** to open **Display IMG** page.

3.4.2 Click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define System Configuration**. Choose activity: **Define RFC Connection for SAP GTT**

3.4.3 Choose **HTTP Connections to External Server**, click **Create** to create a new RFC connection.

3.4.4 Fill in the **Destination** and choose the **Connection Type**: “G-HTTP connection to external server”.

Create Destination

\* Destination: GTT\_APP\_RFC

\* Connection Type: G HTTP connection to external server

3.4.5 Enter a description. In the **Technical Settings** tab, fill in the **Host**, **Port** and **Path Prefix**.

For example, the URL of solution owners is as follows:

<https://xxxxxx.gtt-flp-lbnplatform-pre-live.cfapps.eu10.hana.ondemand.com/>

**Host:** xxxx.gtt-flp-lbnplatform-pre-live.cfapps.eu10.hana.ondemand.com

**Port:** 443

**Path Prefix:** /api/idoc/em/v1/TrackedProcessAndEvent

The screenshot shows the SAP Fiori launchpad interface. At the top, there is a blue header bar with the SAP logo and a back arrow icon. Below the header, the title "RFC Destination GTT\_APP\_RFC" is displayed. On the left, there is a search bar with a dropdown arrow and a "Connection Test" button. To the right of the search bar are "More" and "Description" buttons.

The main content area contains the following fields:

- RFC Destination:** GTT\_APP\_RFC
- Connection Type:** G (selected) - HTTP Connection to External Server
- Description:** A section with three input fields:
  - Description 1: RFC for GTT Standard APP
  - Description 2: (empty)
  - Description 3: (empty)
- Administration** (button)
- Technical Settings** (button, highlighted with a purple border)
- Logon & Security** (button)
- Special Options** (button)

Below the main content, there is a section titled "Target System Settings" with the following fields:

- Host:** (input field)
- Port:** 443 (input field)
- Path Prefix:** /api/idoc/em/v1/TrackedProcessAndEvent (input field, highlighted with a purple border)

3.4.6 In the **Logon & Security** tab, enter the Logon information.

For the basic authentication, the GTT technical user / password is needed. You can get this from your GTT administrator.

For more information about the technical user, please refer to "[Create a Technical User and Assign Role Collection](#)". Please be noted that the technical user must be maintained in "System Connections App", for more information, please refer to "[Maintain Technical User in the System Connections App](#)".

Also, SSL must be **Active**. The recommended SSL Certificate is: DEFAULT SSL Client (Standard).

- The technical user may be locked (informed by an email received in the technical user's mailbox), you need to follow the steps in the email to unlock the technical user.
- Your username, password, or URL of **Host** and **Path Prefix** may be incorrect. You need to provide the correct ones.
- You may have used incorrect technical user in RFC connection. Use the valid one.  
A valid technical user must meet the following requirements:
  - It can successfully sign in to the site <https://accounts.sap.com/ui/protected/profilemanagement> with its email and password.
  - The **User ID** of the technical user must start with "P", as shown in the following screenshot. You can check this after signing in. Regarding how to create a technical user, please refer to "[Create a Technical User and Assign Role Collection](#)".

## 3.5 Define Ports

3.5.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> IDoc Settings**. Choose activity **Define Ports**.

3.5.2 Choose **XML HTTP** folder, and click **Create** to create a new port **GTTAPPPORT**.

3.5.3 Fill in the **RFC Destination**.

3.5.4 Choose **Content Type** as *application/x-sap.idoc*

3.5.5 Choose **HTTP Version** as Version 1.0. Mark it as SOAP Protocol.

The screenshot shows the SAP Fiori interface for configuring ports in IDoc processing. On the left, a tree view under 'Ports' shows categories like Transactional RFC, File, ABAP-PI, XML File, and XML HTTP. Under XML HTTP, a port named 'GTTAPPPORT' is selected, highlighted with a purple border. The main panel displays configuration details for this port:

- Port:** GTTAPPPORT
- Description:** Port for GTT Standard APP
- RFC Destination:** GTT\_APP\_RFC
- Content Type:** application/x-sap.idoc (selected radio button)
- HTTP Version:** Version 1.0 (selected radio button)
- SOAP Protocol:** (checkbox checked)
- Port Options:** A table with two rows:

Description	Value
No Initial Values for DATS, TIMS, NUMC for Alignment	<input type="checkbox"/>
Send Dynamic Enhancement Segments	<input type="checkbox"/>

### 3.5.6 Save the configuration.

## 3.6 Define Partner Profiles

3.6.1 In Display IMG page, unfold Integration with Other SAP Components -> Interface to Global Track and Trace -> IDoc Settings. Choose activity Define Partner Profiles.

3.6.2 Choose Partner Type LS folder, and click Create to create a new partner profile.

The screenshot shows the SAP Fiori interface for defining partner profiles. On the left, there is a tree view under 'Partner Profiles' with various partner types listed: Partner Type AD, Partner Type B (Bank), Partner Type BP (Benefits provider), Partner Type GP (Business Partner), Partner Type KU (Customer), Partner Type LI (Vendor), Partner Type LS (Logical system), and Partner Type US (User). The 'Partner Type LS' node is selected and highlighted with a purple border. On the right, there are several input fields for creating a new partner profile:

- Partner No.: [ ]
- Type: [ ]
- Ty.: [ ]
- Processor: [ ]
- Lang.: [ ]

Below these fields are tabs for 'Post Processing: Valid Processors', 'Classification', and 'Telephony'. The 'Post Processing: Valid Processors' tab is active.

3.6.3 Fill in the **Partner No.** that you created and fill in the **Processor** information.

The screenshot shows the continuation of the partner profile creation process. The 'Partner No.' field contains 'GTTAPPLOGS' and the 'Type' field contains 'LS'. Below these, the 'Post Processing: Valid Processors' tab is active, showing fields for 'Ty.' (set to 'US'), 'Processor' (empty), and 'Lang.' (set to 'EN'). The 'Classification' and 'Telephony' tabs are also visible. At the bottom, there is an 'Outbound' section with a table and a toolbar containing icons for search, add, and delete.

3.6.4 Click **Add** under **Outbound** box to create a new outbound parameter.

The screenshot shows the 'Outbound' section of the partner profile configuration. The 'Outbound' table has columns for 'Partner Role', 'Message Type', 'Message Variant', 'Function', 'Test', 'Receiver Port', 'I...', 'Pac...', and 'Basic Type'. There are three empty rows in the table. At the bottom of the table is a toolbar with icons for search, add, and delete. The 'Add' icon (represented by a plus sign) is highlighted with a purple border.

### 3.6.5 Fill in the Message Type GTTMSG and Fill in the Receiver Port that you created in [3.5](#).

The screenshot shows the SAP Fiori interface for configuring partner profiles. The top navigation bar displays 'SAP' and 'Partner profiles: Outbound parameters'. The main content area is divided into several sections:

- Partner Information:** Partner No.: **GTTAPPLOGS** (Logical System for GTT Standard APP), Type: **LS** (Logical system), Partner Role: [empty field].
- Message Configuration:** Message Type: **GTTMSG**, Message Code: [empty field], Message Function: [empty field], Test checkbox.
- Outbound Options:** Receiver Port: **GTTAPPOR** (Port for GTT Standard APP), Pack. Size: **0**, Queue Processing checkbox.
- Output Mode:** Pass IDoc Immediately (radio button selected), Collect IDocs (radio button), Output Mode: **2**.
- IDoc Type:** Basic Type: **GTTMSG01** (LBN-TT: Process and Event Posting), Extension: [empty field], View: [empty field], Cancel Processing After Syntax Error checkbox, Seg. release in IDoc type: [empty field], Application Release: [empty field].

### 3.6.6 Save the configuration.

### **3.7 Maintain AOT Type Restriction for Cross-Processes**

The following entries should be maintained in transaction “ZGTT\_AOTYPE\_RST - AOT Types Restrictions” for Cross-Processes tracking scenario.

Restr.ID	Restr.Pos	Option	Sign	Application Obj.Type
FU_TO_IDLH	001	Equal To	Include	GTT_IDLV_HD
FU_TO_IDLI	001	Equal To	Include	GTT_IDLV_IT
SH_TO_IDLH	001	Equal To	Include	GTT_IDLV_HD
SH_TO_IDLI	001	Equal To	Include	GTT_IDLV_IT
DL_TO_POIT	001	Equal To	Include	GTT_PO_IT
DL_TO_SOIT	001	Equal To	Include	GTT_SO_IT
SH_TO_ODLH	001	Equal To	Include	GTT_ODLV_HD
FU_TO_ODLH	001	Equal To	Include	GTT_ODLV_HD
FU_TO_ODLI	001	Equal To	Include	GTT_ODLV_IT
DL_TO_POHD	001	Equal To	Include	GTT_PO_HD
DL_TO_SOHD	001	Equal To	Include	GTT_SO_HD

### **3.8 Maintain Event Type Restriction for Cross-Processes**

The following entry should be maintained in transaction “ZGTT\_EVTYPE\_RST – Event Types Restrictions” for Cross-Processes tracking scenario.

Restr.ID	Restr.Pos	Option	Sign	Event Type
DL_TO_POIT	001	Equal To	Include	GTT_EVT_PO_IT_CF

### **3.9 Maintain Sales Order Types that will be sent to SAP Business Network Global Track and Trace**

Maintain the sales order type that you want to send to SAP Business Network Global Track and Trace via transaction “ZGTT\_SOTYPE\_RST - GTT Sales Doc Type Configuration”, then mark it as active.

For example:

Sales Document Type	Active
ZGTT	X

### **3.10 Maintain Delivery Types that will be sent to SAP Business Network Global Track and Trace**

Maintain the outbound and inbound delivery type that you want to send to SAP Business Network Global Track and Trace via transaction “ZGTT\_DLVTYPE\_RST - GTT Delivery Type Configuration”, then mark it as active.

For example:

Delivery Type	Active
LBNP	X
EL	X

### **3.11 Maintain Purchase Order Types that will be sent to SAP Business Network Global Track and Trace**

Maintain the purchase order type that you want to send to SAP Business Network Global Track and Trace via transaction “ZGTT\_POTYPE\_RST - GTT Purchase Doc Type Configuration”, then mark it as active.

For example:

Purchasing Document Type	Active
NB	X

## **4. SAP S/4HANA INTEGRATION CONFIGURATION OPTION 2 (MANUAL CONFIGURATION)**

### **4.1 Define RFC Connection for SAP Business Network Global Track and Trace**

4.1.1 Log on to the business client, enter T-code **SPRO** and then click **SAP Reference IMG** to open **Display IMG** page.

4.1.2 Click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define System Configuration**. Choose activity: **Define RFC Connection for SAP GTT**

4.1.3 Choose **HTTP Connections to External Server**. Click **Create** to create a new RFC connection.

The screenshot shows the SAP Configuration of RFC Connections interface. At the top right, it says "Configuration of RFC Connections". Below the header, there are three buttons: "Generate RFC Callback Allowlist", "Activate Non-Empty Allowlists", and "Allowlist for Dynamic". A red warning icon with the text "RFC callback check not secure" is displayed. Below the warning are several icons: refresh, search, edit (highlighted with a purple border), history, and delete. A table titled "RFC Connections" follows, with columns for Type, PL Active, and Comment. The rows are:

	RFC Connections	Type	PL Active	Comment
<input type="checkbox"/>	> ABAP Connections	3		
<input type="checkbox"/>	> HTTP Connections to External Server	G		
<input type="checkbox"/>	> HTTP Connections to ABAP System	H		
<input type="checkbox"/>	> Internal Connections	I		
<input type="checkbox"/>	> Logical Connections	L		

4.1.4 Fill in the **Destination** and choose the **Connection Type**: 'G-HTTP connection to external server'.

The screenshot shows the "Create Destination" dialog box. It has fields for "Destination" (containing "GTT\_APP\_RFC") and "Connection Type" (containing "G HTTP connection to external server"). Both fields have a red asterisk indicating they are required. At the bottom are two buttons: a green checkmark and a red X.

4.1.5 Enter a description. In the **Technical Settings** tab, fill in the **Host**, **Port** and **Path Prefix**.

For example, the URL of solution owners is as follows:

<https://xxxxxx.gtt-flp-lbnplatform.cfapps.eu10.hana.ondemand.com>

**Host:** xxxx.gtt-flp-lbnplatform.cfapps.eu10.hana.ondemand.com

**Port:** 443

**Path Prefix:** /api/idoc/em/v1/TrackedProcessAndEvent

The screenshot shows the SAP Fiori interface for configuring an RFC destination. The top navigation bar includes the SAP logo and the title "RFC Destination GTT\_APP\_RFC". Below the header, there are buttons for "Connection Test" and "More". The main configuration area has the following fields:

- RFC Destination:** GTT\_APP\_RFC
- Connection Type:** G (selected) - HTTP Connection to External Server
- Description:** (empty)
- Description 1:** RFC for GTT Standard APP
- Description 2:** (empty)
- Description 3:** (empty)

At the bottom, there are tabs for "Administration", "Technical Settings" (which is highlighted with a purple border), "Logon & Security", and "Special Options". A section titled "Target System Settings" contains the following fields:

- Host:** xxxx.gtt-flp-lbnplatform.cfapps.eu10.hana.ondemand.com
- Port:** 443
- Path Prefix:** /api/idoc/em/v1/TrackedProcessAndEvent

#### 4.1.6 In the **Logon & Security** tab, enter the Logon information.

For the basic authentication, the GTT technical user / password is needed. You can get this from your GTT administrator.

For more information about the technical user, please refer to "[Create a Technical User and Assign Role Collection](#)". Please be noted that the technical user must be maintained in "System Connections App", for more information, please refer to "[Maintain Technical User in the System Connections App](#)".

Also, SSL must be **Active**. The recommended SSL Certificate is: DEFAULT SSL Client (Standard).

The screenshot shows the SAP Fiori interface for managing an RFC destination. The top navigation bar includes a back arrow, the SAP logo, and the title "RFC Destination GTT\_APP\_RFC". Below the title are buttons for "Connection Test" and "More".

The main content area is divided into sections:

- RFC Destination:** GTT\_APP\_RFC
- Connection Type:** G HTTP Connection to External Server
- Description:** Fields for Description 1, 2, and 3.
- Logon & Security** (selected tab)
- Special Options**

**Logon Procedure** section:

- Logon with User:** Basic authentication selected. Fields for User and PW Status (saved).
- Logon with Ticket:** Do not send logon ticket selected. Fields for System ID and Client.
- Logon with MQTT/AMQP:** User and PW Status (is initial) fields.

**Security Options** section:

- Status of Secure Protocol:** SSL Active selected. SSL Certificate: DEFAULT SSL Client (Standard). Cert. List dropdown.
- Do not use certificate for logon

#### 4.1.7 Save the configuration.

#### 4.1.8 Click **Connection Test** and check the HTTP status code in the **Test Result** tab:

- Status code “403” indicates the configuration is correct. No action is required.
- If the status code is “401” or a prompt window (as shown in the screenshot below) appears asking your username and password, there are three possibilities:

- The technical user may be locked (informed by an email received in the technical user's mailbox), you need to follow the steps in the email to unlock the technical user.
  - Your username, password, or URL of **Host** and **Path Prefix** may be incorrect. You need to provide the correct ones.
  - You may have used incorrect technical user in RFC connection. Use the valid one.
- A valid technical user must meet the following requirements:
- It can successfully sign in to the site <https://accounts.sap.com/ui/protected/profilemanagement> with its email and password.
  - The **User ID** of the technical user must start with “P”, as shown in the following screenshot. You can check this after signing in. Regarding how to create a technical user, please refer to “[Create a Technical User and Assign Role Collection](#)”.

A screenshot of the SAP ID Service profile management interface. The URL in the browser is https://accounts.sap.com/ui/protected/profilemanagement. The page has a header with the SAP logo and 'Log Out'. On the left, there's a circular profile picture with 'AG' and a 'Profile' section. The main area is divided into sections: 'Personal Information' (First Name, Last Name, Email - showing 'gtt...@sap.com' with a green 'Verified' badge, Login Name, Display Name, User ID - showing 'P200'), 'Company Information' (Company Country/Region - China, Company City - empty), and 'Contact Preferences' (By email, By telephone). Buttons for 'Edit' are available in each section.

## 4.2 Define Logical System

4.2.1 In Display IMG page, click **Integration with Other SAP Components** -> **Interface to Global Track and Trace** -> **Define System Configuration**. Choose activity **Define Logical System**.

4.2.2 Create **New Entries** to create a new Logical System, fill in the Logical System code and Name of the new logical system.

Log.System	Name
GTTPAPPLOGS	Logical System for GTT Standard APP

4.2.3 Save the configuration.

## 4.3 Define Ports

4.3.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> IDoc Settings**. Choose activity **Define Ports**.

4.3.2 Choose **XML HTTP** folder, and click **Create** to create a new port **GTTAPPPORT**.

4.3.3 Fill in the **RFC Destination**.

4.3.4 Choose **Content Type** as *application/x-sap.idoc*

4.3.5 Choose **HTTP Version** as Version 1.0. Mark it as **SOAP Protocol**.

4.3.6 Save the configuration.

## 4.4 Define Partner Profiles

4.4.1 In Display IMG page, unfold **Integration with Other SAP Components** -> **Interface to Global Track and Trace** -> **IDoc Settings**. Choose activity **Define Partner Profiles**.

4.4.2 Choose **Partner Type LS** folder, and click **Create** to create a new partner profile.

The screenshot shows the SAP Fiori interface for defining partner profiles. On the left, there's a sidebar with a tree view of partner types. Under 'Partner Profiles', 'Partner Type LS' is selected and highlighted with a purple border. The main area has fields for 'Partner No.' (containing 'GTTAPPLOGS') and 'Type' (containing 'LS'). Below these, there's a 'Post Processing: Valid Processors' section with fields for 'Ty.' (containing 'US'), 'Processor' (containing 'User'), and 'Lang.' (containing 'EN').

4.4.3 Fill in the **Partner No.** that you created and fill in the **Processor** information.

The screenshot shows the SAP Fiori interface for defining partner profiles. The 'Post Processing: Valid Processors' section now includes the filled-in values: 'Ty.' (US), 'Processor' (User), and 'Lang.' (EN). The 'Outbound' section at the bottom is partially visible.

4.4.4 Click **Add** under the **Outbound** box to create a new outbound parameter.

Partner Role	Message Type	Message Variant	Function	Test	Receiver Port	I...	Pac...	Basic Type
				<input type="checkbox"/>				
				<input type="checkbox"/>				
				<input type="checkbox"/>				

4.4.5 Fill in the Message Type GTTMSG and Fill in the Receiver Port that you created in [4.3](#).

Output Mode	Output Mode:
<input checked="" type="radio"/> Pass IDoc Immediately	2
<input type="radio"/> Collect IDocs	

4.4.6 Save the configuration.

## 4.5 Define CI tenant for SAP Business Network Global Track and Trace

4.5.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**.

Choose activity **Define CI Tenant for SAP GTT**.

4.5.2 Click **New Entries** to create a new CI tenant for SAP Business Network Global Track and Trace, fill in the information for the new CI tenant. The **CI Log. System** is the logical system you created in [4.2](#).

The first screenshot shows the 'Change View "SAP Global Track & Trace Definitions": Overview' screen. A purple box highlights the 'New Entries' button in the top navigation bar. The second screenshot shows the 'Display View "SAP Global Track & Trace Definitions": Overview' screen, where a new entry 'GTTAPPLOGS' has been created. This entry is highlighted with a purple box and includes the logical system 'GTTAPPLOGS', track and trace version 'GTT2.0 Logistics Business Network - Track and Trace', and a description 'CI Tenant for GTT Standard APP'.

## 4.6 Define GTT Extraction Functions

### Prerequisite:

You have already installed ABAPGit and downloaded the code of Fulfillment Tracking apps in your development system.

4.6.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**. Choose activity **Define SAP GTT Extraction Functions**.

4.6.2 Choose the type of extraction function you want to create from the **Dialog Structure**, and click **New entries**.

The screenshot shows the 'Change View "GTT Relevance Functions (App. Obj. Types)": Overview' screen. A purple box highlights the 'New entries' button in the top navigation bar. On the left, the 'Dialog Structure' sidebar lists several categories under 'GTT Relevance Functions (App. Obj. Types)'. The 'Function' table on the right is currently empty, showing columns for 'Function', 'Function Module', and 'Description'.

4.6.3 Input the **Function name** and **Function Module** for the newly created extraction function.

GTT Relevance Functions (App. Obj. Types)		
Function	Function Module	Description
GTT_MIA_IDLV_HD_REL	ZGTT_MIA_OTE_DL_HDR_REL	Appl. Object Type Relevance for Inbound Delivery Header
<input type="checkbox"/>		

4.6.4 Click **Save**.

**Hint:**

After completing the configuration of 'Define GTT Extraction Functions', the configuration should be as follows:

Category	Extractor	Function Module Name	Description

## 4.7 Define Used Business Process Types, Appl. Object Types and Event Types

4.7.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface.**

Choose activity **Define Used Business Process Types, Appl. Object Types and Event Types.**

4.7.2 You can create event types and application object types for each business process type.

The following sections from 4.8 to 4.11 only demonstrate how to configure relevant objects. For actual configuration, refer to the scenarios configuration listed below.

Scenarios configuration:

1) Purchase Order -> Inbound Delivery -> Shipment.

For this scenario, see the following configurations:

[4.12](#) Purchase Order Extractor Configuration

[4.13](#) Inbound Delivery Extractor Configuration

[4.16](#) Shipment Extractor Configuration

2) Purchase Order -> Inbound Delivery -> Freight Unit -> Road Freight Order / Ocean booking / Air Booking.

For this scenario, see the following configurations:

[4.12](#) Purchase Order Extractor Configuration

[4.13](#) Inbound Delivery Extractor Configuration

[4.17](#) Freight Unit Extractor Configuration

[4.18](#) Road Freight Order/Ocean Booking/Air booking Extractor Configuration

3) Sales Order -> Outbound Delivery -> Shipment.

For this scenario, see the following configurations:

[4.14](#) Sales Order Extractor Configuration

[4.15](#) Outbound Delivery Extractor Configuration

[4.16](#) Shipment Extractor Configuration

4) Sales Order -> Outbound Delivery -> Freight Unit -> Road Freight Order / Ocean Booking / Air Booking.

For this scenario, see the following configurations:

[4.14](#) Sales Order Extractor Configuration

[4.15](#) Outbound Delivery Extractor Configuration

[4.17](#) Freight Unit Extractor Configuration

## 4.8 Define Application Object Types for Header Level Extractor

4.8.1 As an example of AOT type's header level tracking introduction, choose the business process type ESC\_DELIV from the **Define Used Business Process Types** on the right side.

Double click **Define Application Object Types**.

Bus. Proc. Type	Update Mode	BPT Process Mode	Description
ESC_DELIV	Update Task (V1)	Active	Delivery in SAP R/3 Enterprise
ESC_FI_CLEARING	Update Task (V1)	Active	FI Clearing in SAP R/3 Enterprise

4.8.2 Click **New Entries** to create a new Application Object Type.

4.8.3 Fill in the **Application Object Type** and **Text** fields.

4.8.4 Fill in the information required in the **General Data** tab. **CI for GTT** is the CI Tenant you created in [4.5](#). Check **GTT Relevant**.

Bus. Proc. Type: ESC\_DELIV  
Appl. Obj. Type: **GTT\_IDLV\_HD** ① Extract Inbound Delivery Header information to Global Track and Trace  
Text: Inb. Delivery Header

General Data    Control Tables    Object Identification    Global Track & Trace Relevance    Parameter Setup

Business Object Reference  
Object Type: **BUS2015** InboundDelivery  
BO Setup Fnct.:

Behavior  
 GTT Relevant  
 Stop AO Determ.  
 Appl. Log Deact

Hint:

When you are creating Application Object Type for one Business Process Type, make sure the AOT name must be the same name defined in the corresponding model in the *Manage Models* app in Version 2 of SAP Business Network Global Track and Trace.

#### 4.8.5 Fill in the Main Object table and Master Table in the Control Tables tab.

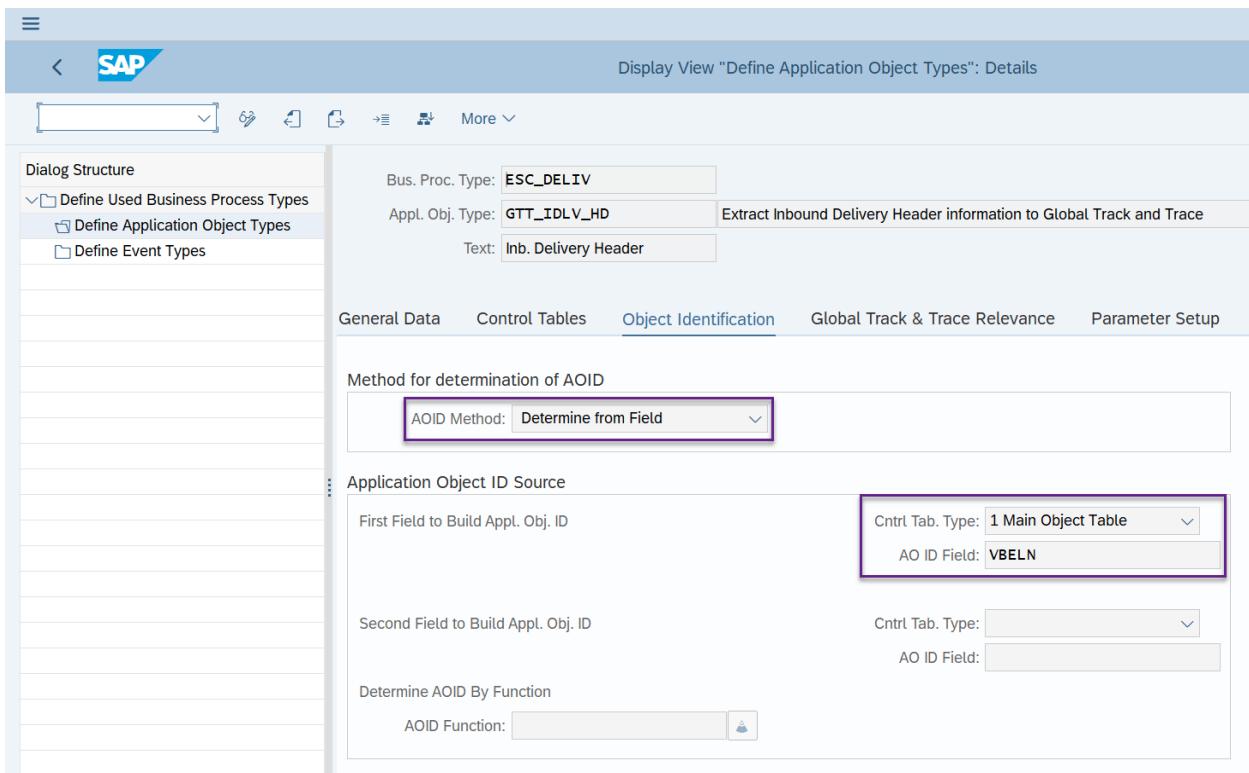

Note:

If the event type or application object type is on the header level, then you only need to assign the **Main Object Table**.

If the event type or application object type is on the item level, then you need to assign the **Main Object Table** and **Master Table**, and assign the reference between the **Main Object Table** and **Master Table**.

4.8.6 If there is no customized logic to determine the AOT ID, choose **Determine from Field**, and use the key field to fill the AO ID fields. When choosing **Determine by Function**, you must enter the customized information in the AOID function field.

4.8.7 In the **Global Track & Trace Relevance** tab, choose the **GTT Relevance Method** you need.

If you choose the **GTT Relevance Method** as *Check Function*, then you need to define a relevance function according to [4.6](#), and fill in the relevance function name here.

4.8.8 In the **Parameter Setup** tab, choose the **TrkID Method** as you need.

If you choose the **TrkID Method** as *Determine by Function*, then you need to define a tracking ID function according to [4.6](#), and fill in the relevance function name here.

If no customized logic exists, for **TrkID Method** choose *Determine from Field*, then you need to fill the key field and name the Code Set for the AOT.

Fill in the extractor functions for **Control Data, Info Data(optional), Planned Event**.

Click **Save**.

Hint:

In the AOT you maintained, make sure the name of Tracking ID Type is the same name defined in the corresponding process type of the model in the *Manage Models* app in Version 2 of SAP Business Network Global Track and Trace.

If the Tracking ID Type is determined by Field, input the value source field in the Tracking ID field, and the Code Set that refers to the Tracking ID Type for the AOT as below.

## 4.9 Define Application Object Types for Item Level Extractor

4.9.1 As an example of AOT type's item level tracking introduction, choose the business process type ESC\_DELIV from the **Define Used Business Process Types** on the right side. Double click **Define Application Object Types**.

The screenshot shows the SAP AOT interface with the title 'Display View "Define Used Business Process Types": Overview'. On the left, there is a 'Dialog Structure' tree with nodes like 'Define Used Business Process Types' and 'Define Application Object Types'. The main area displays a table titled 'Define Used Business Process Types' with columns: Bus. Proc. Type, Update Mode, BPT Process Mode, and Description. Two rows are shown: 'ESC\_DELIV' (selected) with 'Update Task (V1)' and 'Active' status, and 'ESC\_FI\_CLEARING' with 'Update Task (V1)' and 'Active' status. The 'Description' column for 'ESC\_DELIV' includes a dropdown menu with 'Delivery in SAP R/3 Enterprise'.

4.9.2 Click **New Entries** to create a new Application Object Type.

4.9.3 Fill in the **Application Object Type** and **Text** fields.

4.9.4 Fill in the information required in the **General Data** tab. **CI for GTT** is the CI Tenant you created in [4.5](#). Check **GTT Relevant**.

The screenshot shows the 'Display View "Define Application Object Types": Details' screen. The 'Dialog Structure' tree on the left shows 'Define Used Business Process Types' and 'Define Application Object Type'. The main area has tabs for 'General Data', 'Control Tables', 'Object Identification', 'Global Track & Trace Relevance', and 'Parameter Setup'. The 'General Data' tab is selected, showing fields for 'Bus. Proc. Type' (ESC\_DELIV), 'Appl. Obj. Type' (GTT\_IDLV\_IT), and 'Text' (Inb. Delivery Item). Below these, under 'Sequencing / Destination', is a section for 'CI for GTT' with 'Seq. No.' 10 and 'GTTAPPLOGS' selected. Under 'Business Object Reference', the 'Object Type' is set to 'BUS2015' and 'InboundDelivery'. Under 'Behavior', the checkbox 'GTT Relevant' is checked, while 'Stop AO Determ.' and 'Appl. Log Deact' are unchecked.

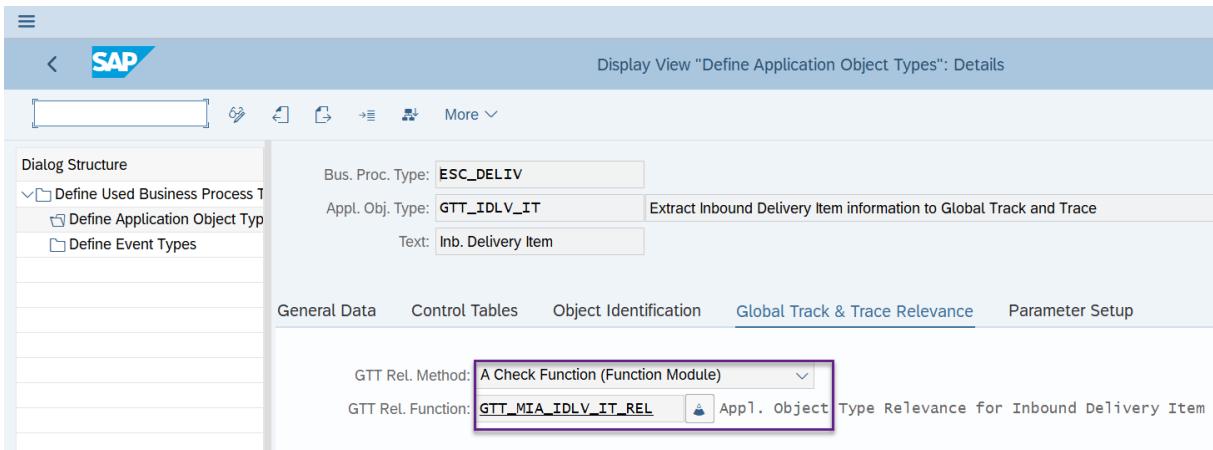

#### 4.9.5 Fill in the Main Object table and Master Table in the Control Tables tab.

The screenshot shows the SAP Fiori interface for defining application object types. The title bar reads "Display View 'Define Application Object Types': Details". The left sidebar shows a tree structure under "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs at the top: General Data, Control Tables (selected), Object Identification, Global Track & Trace Relevance, and Parameter Setup. The "Control Tables" tab contains sections for "Data Source for Created and Updated Objects" and "Data Source for Deleted Objects". The "Data Source for Created and Updated Objects" section has fields for "Main Obj. Table" (DELIVERY\_ITEM\_NEW) and "Master Table" (DELIVERY\_HEADER\_NEW). The "Data Source for Deleted Objects" section has a field for "Del.Obj. Table" (DELIVERY\_ITEM\_OLD). Below these are sections for "Reference Between Main and Master Table" and "Second Field Reference from Main to Master Table", each with uplink fields and mode/const fields. A purple box highlights the "Main Obj. Table" and "Master Table" fields.

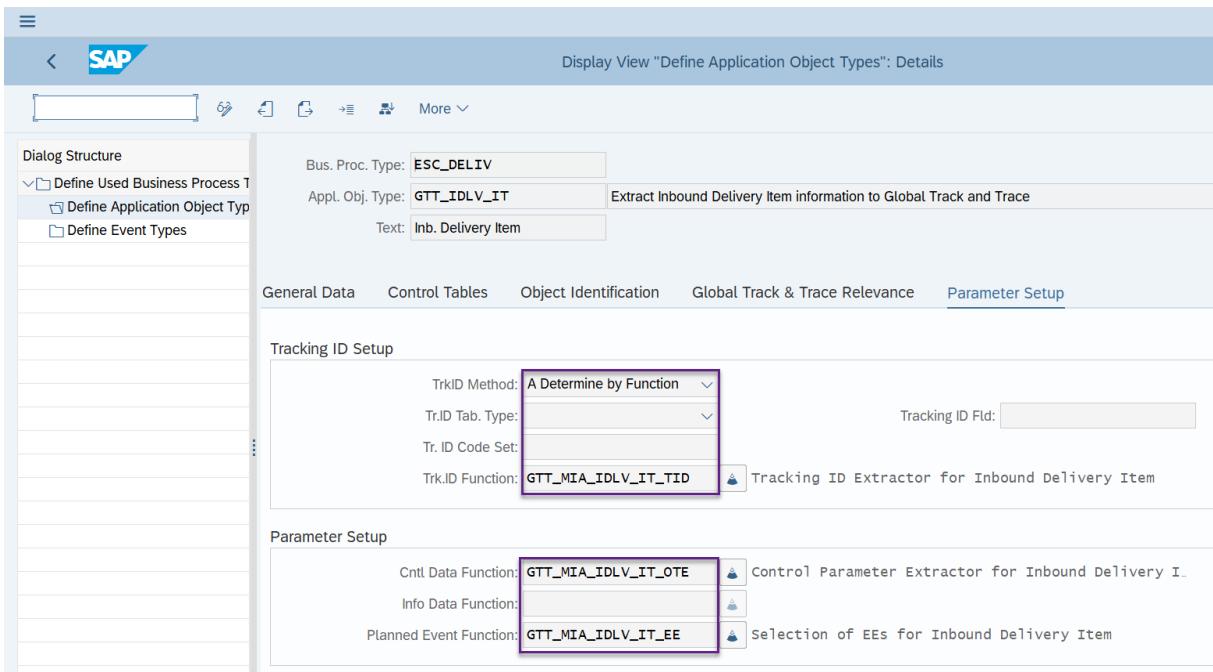

#### 4.9.6 Fill in the AOID method in the Object Identification tab.

The screenshot shows the SAP Fiori interface for defining application object types, focusing on the "Object Identification" tab. The title bar reads "Display View 'Define Application Object Types': Details". The left sidebar shows a tree structure under "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs at the top: General Data, Control Tables, Object Identification (selected), Global Track & Trace Relevance, and Parameter Setup. The "Object Identification" tab contains sections for "Method for determination of AOID" and "Application Object ID Source". The "Method for determination of AOID" section has a dropdown menu set to "Determine from Field". The "Application Object ID Source" section contains two groups: "First Field to Build Appl. Obj. ID" and "Second Field to Build Appl. Obj. ID". Each group has a dropdown for "Cntrl Tab. Type" (set to "1 Main Object Table") and a field for "AO ID Field" ("VBELN" for the first, "POSNR" for the second). A purple box highlights the "Cntrl Tab. Type" and "AO ID Field" fields for both groups. Below these are sections for "Determine AOID By Function" and "AOID Function" (with a small icon).

#### 4.9.7 In the Global Track & Trace Relevance tab, choose the GTT Relevance Method you need.

#### 4.9.8 In the **Parameter Setup** tab, choose the **TrkID Method** as you need.

## 4.10 Define Event Types for Header Level Extractor

4.10.1 As an example of event's header level tracking introduction, choose the business process type ESC\_MATDOC from the **Define Used Business Process Types** on the right side. Double click **Define Event Types**.

Bus. Proc. Type	Update Mode	BPT Process Mode	Description
ESC_MATDOC	Update Task (V1)	Active	Material Document in SAP R/3 Enterprise
ESC_MM_INVOICE	Update Task (V1)	Active	MM Invoice in SAP R/3 Enterprise

4.10.2 Click **New Entries** to create a new event type.

4.10.3 Fill in the **Event Type** and **Text** fields.

4.10.4 Fill in the information required in the **General Data** tab. **HCI for GTT** is the CI Tenant you created in [4.5. Event Function](#) is the extractor function you created in [4.6](#). Check **GTT Relevant**.

#### 4.10.5 Fill in the Main Object Table and Master Table in the Control Tables tab.

The screenshot shows the SAP Fiori interface for defining event types. The title bar reads "Display View 'Define Event Types': Details". The left sidebar shows "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs for "General Data", "Control Tables" (which is selected), and "Global Track & Trace Relevance". Under "Control Tables", there is a section for "Data Source for Events" where the "Main Obj. Table" field is set to "MATERIAL\_HEADER" and highlighted with a purple border. Below it are fields for "Old Main Obj. Table" and "Old Master Table", both currently empty. There is also a section for "Reference Between Main and Master Table" with fields for "First Field Reference from Main to Master Table" and "Second Field Reference from Main to Master Table", both also empty.

##### **Caution:**

If the event type or application object type is on the header level, then you only need to assign the **Main Object Table**.

If the event type or application object type is on the item level, then you need to assign the **Main Object Table** and **Master Table**, and assign the reference between the **Main Object Table** and **Master Table**.

#### 4.10.6 In the Global Track & Trace Relevance tab, choose the GTT Relevance Method you need.

If you choose the **GTT Relevance Method** as *Check Function*, then you need to define a relevance function according to [4.6](#), and fill in the relevance function name here. Click **Save**.

The screenshot shows the SAP Fiori interface for defining event types, specifically on the "Global Track & Trace Relevance" tab. The title bar reads "Display View 'Define Event Types': Details". The left sidebar shows "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs for "General Data", "Control Tables" (selected), and "Global Track & Trace Relevance". Under "Global Track & Trace Relevance", there is a dropdown menu for "GTT Rel. Method" set to "A Check Function (Function...)" and a field for "GTT Rel. Function" containing "GTT\_MIA\_IDLV\_HD\_GR", which is also highlighted with a purple border. A tooltip "Relevance function for Actu" is visible next to the function field.

## 4.11 Define Event Types for Item Level Extractor

4.11.1 As an example of the event's item level tracking introduction, choose the business process type ESC\_DELIV from the **Define Used Business Process Types** on the right side. Double click **Define Event Types**.

The screenshot shows the SAP Fiori interface with the title "Display View 'Define Used Business Process Types': Overview". On the left, there is a "Dialog Structure" sidebar with sections: "Define Used Business Process Types" (selected), "Define Application Object Types", and "Define Event Types". The main area displays a table titled "Define Used Business Process Types" with columns: Bus. Proc. Type, Update Mode, BPT Process Mode, and Description. Two rows are present: "ESC\_DELIV" (selected) with "Update Task (V1)" and "Active" status, and "ESC\_FI\_CLEARING" with "Update Task (V1)" and "Active" status. A tooltip for "ESC\_DELIV" indicates "Delivery in SAP R/3 Enterprise".

4.11.2 Click **New Entries** to create a new event type.

4.11.3 Fill in the **Event Type** and **Text** fields.

4.11.4 Fill in the information required in the **General Data** tab. **HCI for GTT** is the CI Tenant you created in [4.5. Event Function](#) is the extractor function you created in [4.6](#). Check **GTT Relevant**.

The screenshot shows the SAP Fiori interface with the title "Display View 'Define Event Types': Details". On the left, there is a "Dialog Structure" sidebar with sections: "Define Used Business Process Types" (selected), "Define Application Object Types", and "Define Event Types". The main area displays the "General Data" tab of the event type configuration. The "Bus. Proc. Type" is set to "ESC\_DELIV". The "Event Type" is set to "GTT\_EVT\_IDLV\_PA" with the description "Delivery Item Put Away Event". The "Text" field contains "Put Away Event". Other tabs visible include "Control Tables" and "Global Track & Trace Relevance". Below the General Data tab, there are sections for "Sequencing / Destination" (Seq. No.: 10, HCI for GTT: GTTAPPLOGS, CI Tenant for GTT Standard APP), "Data Setup" (Event Function: GTT\_MIA\_IDLV\_IT\_PA, Actual event Inbound Delivery Item), and "Behavior" (checkboxes for GTT Relevant, Stop ET Det., and Appl. Log Deact.).

#### 4.11.5 Fill in the Main Object Table and Master Table in the Control Tables tab.

## 5. CONFIGURATION AND CODING GUIDE – ADVANCED

This chapter has been moved to the guide *How to Send Documents from SAP S/4HANA to SAP Business Network Global Track and Trace* on SAP Help Portal. Please check the Coding Tips section of this guide. You can find this guide at <http://help.sap.com/gtt>.

### 6 KNOWN ISSUES

#### 6.1 Planned Event Extension Not Enabled

Currently, on SAP S/4HANA side, the EXTENSION segment of process IDOC is not enabled for the planned event part, which means that you cannot make the user-defined fields for planned events in the *Manage Models* app.

The workaround is to make use of Control Parameter's segment in IDOC and make the field mapping on the tracked process level in the *Manage Models* app.

#### 6.2 One-time locations Relevant

- When the supplier address is changed in the purchase order header, the purchase order item IDOC cannot be triggered. So, the change cannot be updated to its purchase order items in the GTT system.
- After the sales order and the outbound delivery are created, then if you change the address in the sales order, the change cannot be updated to the outbound delivery in the GTT system, because no new outbound delivery IDOC is generated and sent to the GTT system. The same goes for the purchase order and the inbound delivery.
- After the outbound delivery and the LE-TRA shipment are created, then if you change the address in the outbound delivery, the change cannot be updated to the LE-TRA shipment in the GTT system, because no new LE-TRA shipment IDOC is generated and sent to the GTT system. The same goes for the inbound delivery and the LE-TRA shipment.
- If you change the address in the LE-TRA shipment, the change can be updated to the outbound/inbound delivery header through cross-process updates. But it cannot be updated to the item level.

## APPENDIX ONE: DEFINE THE UNPLANNED EVENTS FOR AIR BOOKING

You need to define the following unplanned events for air booking before they can be synchronized back from GTT to TM:

- Flight Booked
- Manifest Ready
- Received from Shipper
- Consignee Notified.

To define these unplanned events, do the following:

Note: here the unplanned event "Flight Booked" is used as an example.

1. On the **Display IMG** page, click **Transportation Management-> Integration-> Tracking and Tracing of Processes and Documents-> Define Transportation Activities for Tracking and Tracing**.
2. Select **Event for Business Document** and click **New Entries**.

Event	Description	Transp Act	Stop Cat	Internal
ARRIVAL_DOOR	Arrival at Door	11		
ARRIV_DEST	Arrival at Destination	04	I S	
BLOCK_FOR_EXEC	Block for Execution	99		

3. Input the **Event name, Description, Transp Act** and Click **Save**.

Event	Description	Transp Act	Stop Cat	Internal
FLIGHT_BOOKED	Flight Booked	99		

4. Select the event "FLIGHT\_BOOKED", then double click **Assignment of Events to Business Object**.

Event	Description	Transp Act	Stop Cat	Internal
FLIGHT_BOOKED	Flight Booked	99		
GEN_DISCRP	General Discrepancy	99		

5. Click **New Entries**.

6. Select "BO Freight Booking" and Click **Save**.

Results:

The configuration results for these event types should be as follows:

Event	Description	Transportation Activity	Stop Category	Event relevance for category
FLIGHT_BOOKED	Flight Booked	99	blank	BO (Freight Booking)
MANIFEST_READY	Manifest Ready	99	blank	BO (Freight Booking)
RCVD_FROM_SHIPPER	Received from Shipper	99	blank	BO (Freight Booking)
CONSIGNEE_NOTIFIED	Consignee Notified	99	blank	BO (Freight Booking)

Now you can go on to configure for synchronizing these unplanned events back to TM. For configuration details, see [Synchronize Actual Events Back to TM System](#). If the events still cannot be synchronized back to TM, please check the SAP Note [3010748 - Allow unexpected events without location reference in TransportationEventBulkNotification](#).

## APPENDIX TWO: FAQS

This chapter provides you with answers to questions commonly asked about the configuration.

**Q1: After the configuration of GTT and SAP TM systems, we found that the freight unit / freight order / freight booking IDOC cannot be sent to SAP Business Network Global Track and Trace, how can we do the troubleshooting?**

### Step 1: Check the integration of SAP TM and SAP EM

The Post Processing Framework (PPF) is used to trigger the communication from SAP Transportation Management (SAP TM) to SAP Event Management (SAP EM). You need to maintain the output management adapter for this communication to work.

- a. Log onto SAP Business Client, enter T-code SPRO and then click **SAP Reference IMG** to open the **Display IMG** page. Go to node **Cross-Application Components -> Processes and Tools for Enterprise Applications -> Reusable Objects and Functions for BOPF Environment -> PPF Adapter for Output Management -> Maintain Output Management Adapter Settings**.
- b. In the **Dialog Structure** section, choose **Direct Output Agents (w/o PPF & w/o History)**.
- c. Choose the entry shown in the screenshot and enable it.

The screenshot shows the SAP Reference IMG interface with the title "Display View 'Direct Output Agents (w/o PPF & w/o History)': Overview". The left sidebar shows the "Dialog Structure" tree with nodes like "PPF Output Agents for BO Nodes", "Assign PPF Profiles", "Action Settings", and "Direct Output Agents (w/o PPF & w/o History)". The main area displays a table titled "Direct Output Agents (w/o PPF & w/o History)" with columns: Business Object, Node, Agent Name, Description, Enable, and Ch. One row is selected: "/SCMTMS/TOR" with Node "ROOT" and Agent Name "SEND\_EM\_DATA\_FROM\_TOR". The "Enable" checkbox is checked. Other rows include "/SCMTMS/TOR" (Node ROOT, Agent TOR\_BW\_EXTRACTION), "/SCMTMS/trigger\_collector" (Node ROOT, Agent TRIGGER\_COLLECTOR), "/SCMTMS/TRQ" (Node ROOT, Agent DPP\_SORT\_DETERMINATION), "/SCMTMS/TRQ" (Node ROOT, Agent SEND\_EM\_DATA\_FROM\_TRQ), "/SCMTMS/TRQ" (Node ROOT, Agent TRQ\_BW\_EXTRACTION), and "/SCMTMS/WAYBILLNO" (Node ROOT, Agent DPP\_SORT\_DETERMINATION).

The screenshot shows the SAP Reference IMG interface with the title "Display View 'Direct Output Agents (w/o PPF & w/o History)': Details". The left sidebar shows the "Dialog Structure" tree with the "Direct Output Agents (w/o PPF & w/o History)" node selected. The main area displays a form for configuring the selected agent. The "Business Object" field is set to "/SCMTMS/TOR", the "Node" field is set to "ROOT", and the "Agent Name" field is set to "SEND\_EM\_DATA\_FROM\_TOR". The "Description" field contains the note "Call SAP EM (recommended, check note 1842397 for details)". The "Enable" checkbox is checked. Other configuration fields include "Incl. Child Chgs", "Synch/Asynch" (set to "B Has Uncritical o/p: Process after Commit (background)", dropdown menu), "Processor Class" (set to "/SCMTMS/CL\_OUTMGMT\_EXEC\_TOR"), and three "User-Def. Func." fields (empty).

- d. In the **Dialog Structure** section, choose **Nodes for Before Image**.  
e. Create the following three entries:

Business Object	Node	Sub Node Name
/SCMTMS/TOR	ROOT	EXECUTIONINFORMATION
/SCMTMS/TOR	ROOT	ITEM_TR
/SCMTMS/TOR	ROOT	STOP

## Step 2: Check the trigger point of the generation of freight unit / freight order / freight booking IDOC

- a. Go to T-code SE19, fill in the **Enhancement Implementation** with "ZGTT\_STS\_EI\_SEND\_TOR\_DATA" and click **Display**.

Enhancement Implementation: `ZGTT_STS_EI_SEND_TOR_DATA`

Display      Change

- b. Ensure that the **Enhancement Implementation** “ZGTT\_STS\_EI\_SEND\_TOR\_DATA” is active. In the **Enh. Implementation Elements** tab, ensure that **BAdI Implementation** “ZGTT\_STS\_BI\_SEND\_TOR\_DATA” is active.

### Step 3: Check the freight unit type settings

- On the IMG, go to **Transportation Management -> Planning -> Freight Unit -> Define Freight Unit Types**.
- In the table, open the applicable freight unit type to be tracked with SAP Event Management.
  - In the **Integration Settings**, fill in the **Application Obj.Type** field as follows:

Note: make sure the value you filled in is the same as the ones in the other two fields:

- Appl.Obj.Type field  
(Navigation Path: **IMG->Integration with Other SAP Components-> Interface to Global Track and Trace -> Define Application Interface**, choose **Define Used Business Process Types, Appl. #### Step 4: Check the freight order type settings

- a. On the IMG, go to **Transportation Management -> Freight Order Management ->Freight Order-> Define Freight Order Types**.
- b. In the table, open the applicable freight order type to be tracked with SAP Event Management.
  - In the **Integration Settings**, fill in the **Application Object Type** field as follows:

#### Step 6: Check the freight order / freight booking master data

To send freight orders or freight bookings to SAP Business Network Global Track and Trace, do the following:

- Assign the carrier.
- Change the execution status.
  - For freight orders: in the **Execution Status** tab on the top, change the **Execution Status** to “Set to Ready for Transportation Execution” or “Set to In Execution”.

The screenshot shows the SAP Fiori interface for editing a freight order. The top navigation bar includes 'Edit GTT Standard Freight Order Type AccAWS 6100063618', 'Edit', 'Refresh', 'Copy', 'Other Copy Options', 'Check', 'Follow Up', 'Scheduling', 'Subcontracting', 'Create Service Order', 'Schedule', 'Set Status', 'Display Settings', and 'Blocking Information'. The main area has tabs for 'General Data', 'Business Partner', 'Items', 'Overview', 'Stages', 'Utilization', and 'Subcontracting'. Under 'General Data', there are sections for 'Truck' (Means of Transport, Vehicle, Registration Country/Region No., Total/Capacity), 'Cargo Information' (Cargo Weight, Volume, Quantity, Total Weight), and 'General Information' (Document Type, Description, Origin of Freight Order). A context menu is open at the top right, listing options like 'Load Plan Status (Stop)', 'Execution Status' (highlighted), 'Fixing', 'Customs', 'Charges/Settlement', 'Cancel Document', 'Load Plan Status (Packaging)', and 'Load Plan Status (Load Planning)'. A circled '2' is next to the menu. A circled '1' is next to the 'Carrier' field, which contains 'LBN\_CAR100'.

- For freight bookings:
  - Air booking: in the **Execution Status** tab on the top, change the **Execution Status** to "Set to MAWB Finalized" or "Set to In Execution".

- Ocean booking: in the **Execution Status** tab on the top, change the **Execution Status** to "Set to Ready for Transportation Execution" or "Set to In Execution".

## Debugging

If the issue still exists, you can perform the following steps to debug in the extractor code:

- On the IMG, go to node **Cross-Application Components -> Processes and Tools for Enterprise Applications ->Reusable Objects and Functions for BOPF Environment -> PPF Adapter for Output Management -> Maintain Output Management Adapter Settings.**
- In the **Dialog Structure** section, choose **Direct Output Agents (w/o PPF & w/o History)**. Ensure that the following entry is enabled:

Display View "Direct Output Agents (w/o PPF & w/o History)": Overview							
Dialog Structure		Direct Output Agents (w/o PPF & w/o History)

	/SCMTMS/TRQ	ROOT	TRQ_BW_EXTRACTION		TRQ Delta Extraction to SAP BW	<input type="checkbox"/>	
	/SCMTMS/WAYBILLNO	ROOT	DPP_SORT_DETERMINATION		DPP: DOA Agent to determine/write SoRT Information for WBN	<input type="checkbox"/>	

Note: in this entry, the value of **Synch/Asynch** column is "Has Critical o/p: Process during Save - before Commit".

- Set a break point in method /SCMTMS/IF\_SEND\_TOR\_DATA~CALL\_EVENT\_MGR of the BAdI implementing class ZCL\_GTT\_STS\_SEND\_TOR\_DATA.
- For the scenario when the freight unit watches the freight order, set additional break point in below places:
  - In method ZIF\_GTT\_STS\_BO\_READER~CHECK\_RELEVANCE of class ZCL\_GTT\_STS\_BO\_FU\_READER, check the value of "rv\_result". If it is "T", it means

- the freight unit IDOC can be generated. Otherwise, the freight unit IDOC cannot be generated.
- In method ZIF\_GTT\_STS\_BO\_READER~CHECK\_RELEVANCE of class ZCL\_GTT\_STS\_BO\_FO\_READER, check the value of "rv\_result". If it is "T", it means the freight order IDOC can be generated. Otherwise, the freight order IDOC cannot be generated.

## Q2: How to add customized planned event and synchronize this event back to SAP TM?

Suppose you want to add the planned event type "quality inspection" for the freight order tracked process, do the following:

**Step 1:** Create a planned event type in the GTT standard model "gttft1" in the Manage Models app

- Launch the Manage Models app and go to the GTT standard model "gttft1".
- In the **Event Type Pool** tab, click **Create** and fill in the event information in the dialogue. For details, see "[Create Event Type](#)" section in [Guide for Model Administrators](#).  
Note: the event type must start with "ZZ". For example ZZINSPECTION.
- Assign the newly created event type to the shipment tracked process.
  - In the **Tracked Process** tab, choose **Admissible Planned Events** from the dropdown list on the right and click **Add**.
  - In the **Details** tab of the dialogue, choose the **Event Type** that you created from the dropdown list and fill in the rest of information.
- Configure the IDOC mapping
  - Click **Edit** on the top. In the **IDOC Integration** tab, for **Tracked Process** field, choose "Shipment" from the dropdown list.
  - Under **Tracked Process / Events**, fill in **IDOC** and **Event Code** for the newly created event type.

The screenshot shows the SAP Manage Models app interface. The top navigation bar includes tabs for Tracked Process, Field Type Pool, Event Type Pool, Code List, **IDOC Integration** (which is currently selected), and Visibility Provider Integration. Below the navigation bar, there is a dropdown labeled "Tracked Process:" set to "Shipment". The main content area is titled "Tracked Process Mapping" and shows the "Tracked Process / Events (54)" table. The table has columns for Name, IDOC, and Event Code. A new row has been added for "ZZINSPECTION", which is highlighted with a purple border. The "Event Code" column for this row contains "ZZ\_INSPECTION". To the right of the table, there are two vertical panes: "User M" and "Field".

Tracked Process / Events (54)		
Name	IDOC	Event Code
GateInEmpty	E1EVMHDR02	GATEIN_EMPTY
GateInFull	E1EVMHDR02	GATEIN_FULL
GateOutEmpty	E1EVMHDR02	GATEOUT_EMPTY
GateOutFull	E1EVMHDR02	GATEOUT_FULL
ZZINSPECTION	E1EVMHDR02	ZZ_INSPECTION

- In the **User Script Before Standard Script** section, add your script for synchronizing back the customized event to SAP TM.

Example:

```
var inspection_event = modelNamespace + ".Shipment.ZZINSPECTION";
if (inspection_event == actualEvent.eventType) {
```

```

        eventForwardToTM = true;
    }
}

```

- f. Save your changes and click **Deploy** on the top right to deploy the model. Once the model is successfully deployed, you can see **Active** on the model card with its last operation status "Deployment Success".

**Step 2:** Add the ABAP Implementation Code

- a. Navigate to the method ZIF\_GTT\_STS\_PE\_FILLER~GET\_PLANNED\_EVENTS of class ZCL\_GTT\_STS\_PE\_FO\_FILLER in the system.
- b. Add the planned event type that you created in the Manage Models app as milestone event. For coding tips, see chapter [5](#) in this guide.

Note: when you add the planned event type, remember that the event name here must be the same as the event code that you previously maintained in the IDOC mapping.

**Step 3:** Add the above customized event In SAP TM.

- a. On the **Display IMG** page, click **Transportation Management-> Integration-> Tracking and Tracing of Processes and Documents-> Define Transportation Activities for Tracking and Tracing**.
- b. Select **Event for Business Document** and click **New Entries**.

Event	Description	Transp Act	Sto
ARRIVAL\_DOOR	Arrival at Door	11	
ARRIV\_DEST	Arrival at Destination	04	I S
BLOCK\_FOR\_EXEC	Block for Execution	99	

c. Input the **Event name**, **Description**, **Transp Act** and Click **Save**.

Event	Description	Transp Act	Stop Cat	Internal
ZZ_INSPECTION	Quality inspection	99		<input checked="" type="checkbox"/>

d. Select the event "ZZ\_INSPECTION", then double click **Assignment of Events to Business Object**.

Event	Description	Transp Act	Stop Cat	Internal
ZZ_INSPECTION	Quality inspection	99		<input checked="" type="checkbox"/>

e. Click **New Entries**.

f. Select "TO Freight Order" and Click **Save**.

Now you can go on to configure for synchronizing events back to TM. For configuration details, see [Synchronize Actual Events Back to TM System](#). If the events still cannot be synchronized back to TM, please check the SAP Note [3010748 - Allow unexpected events without location reference in TransportationEventBulkNotification](#).

### Q3: How to update business partner's LBN ID?

To update the LBN ID in SAP Transportation Management (SAP TM) for a logistics service provider (your business partner), proceed as follows in SAP TM:

#### Step 1: Define Identification Categories for LBN Identification Number

Go to SAP Customizing Implementation Guide under **Cross-Application Components->SAP Business Partner->Business Partner->Basic Settings->Identification Numbers->Define Identification Categories** and maintain the following entry:

ID Cat.	Description	ID Unique	Disp. Only	One ID->BP	Identification Schema
LBN001	LBN Identification			X	

#### Step 2: Define Identification Types for LBN Identification Number

Go to SAP Customizing Implementation Guide under **Cross-Application Components->SAP Business Partner->Business Partner->Basic Settings->Identification Numbers->Define Identification Types**. Create a new ID Type as follows:

ID Type	Description	ID Categ.	Persons	Organizations
LBN001	LBN Identification	LBN001	X	X

#### Step 3: Update Business Partner's LBN ID

- Go to the **Manage Business Partner** transaction (transaction BP).
- Set the filtering criteria to find the business partner for which you want to update the LBN ID. Double-click the business partner to open its **Display Organization** page.
- Go to the **Identification** tab. In the **Identification Numbers** section, enter “LBN001” in the **IDType** column.
- In the **Identification Number** field, enter the LBN ID and save your changes.

### Q4: How is the connection established between SAP S/4HANA and SAP Business Network Global Track and Trace? Do I need to configure PI in SAP S/4HANA?

When saving the transaction data, the asynchronous IDOC was sent to establish the connection between SAP S/4HANA and SAP Business Network Global Track and Trace. You don't need to set up PI in SAP S/4HANA.

The data process flow is as below:

## Q5: What scenarios are supported in SAP Business Network Global Track and Trace?

1) Purchase Order -> Inbound Delivery -> Shipment.

2) Purchase Order -> Inbound Delivery -> Freight Unit -> Road Freight Order / Ocean Booking / Air Booking.

3) Sales Order -> Outbound Delivery -> Shipment.

4) Sales Order -> Outbound Delivery -> Freight Unit -> Road Freight Order / Ocean Booking / Air Booking.

5) Stock Transport Order

Scenario A:

Purchase Order -> Outbound Delivery -> Shipment.

Scenario B:

Purchase Order -> Outbound Delivery -> Freight Unit -> Road Freight Order / Ocean Booking / Air Booking.

**Q6: Do sample codes support one-time locations? Where can I maintain the one-time location address?**

Yes. You can maintain one-time locations in the following fields:

Tracked Processes	Fields
Purchase Order	<b>Address</b> in Purchase Order header
Purchase Order Item	<b>Delivery Address</b> in Purchase Order Item
Inbound Delivery	<b>Goto-&gt;Header-&gt;Partners-&gt;Partner Function "Supplier"</b>
Shipment	Fields under <b>Stages-&gt;Departure point / Destination</b> or you can directly add the one-time location address in the stage
Sales Order	Fields under <b>Goto-&gt;Header-&gt;Partner-&gt;Partner Function "Sold-To Party" or "Ship-To Party"</b>
Outbound Delivery	Fields under <b>Goto-&gt;Header-&gt;Partners-&gt;Partner Function "Ship-To Party"</b>

## Q7: How to stop sending unnecessary IDOCs from SAP S/4HANA to the GTT system?

To do so, you should not mark application object types/event types as “GTT Relevant”.

Take the purchase order as an example, you can perform the following steps:

- In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**.
- Choose activity **Define Used Business Process Types, Appl. Object Types and Event Types**.
- Choose the business process type “ESC\_PURORD” and double click **Define Application Object Types** on the left.
- Uncheck the “GTT Relevant” box for application object types “GTT\_PO\_HD” and “GTT\_PO\_IT”, and it will stop sending control parameter / planned events / tracking ID of the purchase order and its items.

Application ObjType	Seq. No.	Description	CI for GTT	Object Type	GTT Relev.
GTT_PO_HD	10	Purchase Order Head for Procurement Visibility (GTT)	GTTAPPLOGS	BUS2012	<input type="checkbox"/>
GTT_PO_IT	10	Purchase Order Item for Procurement Visibility (GTT)	GTTAPPLOGS	BUS2012	<input type="checkbox"/>
PCM10_ITEM		Purchase Order Item for Procurement Visibility		BUS2012	<input type="checkbox"/>

- Uncheck the “GTT Relevant” box for event types “GTT\_EVT\_PO\_IT\_CF” and “GTT\_EVT\_PO\_IT\_DE”, and it will stop sending actual events of the purchase order and its items.

Business Process Type	Event Type	Description	Text	GTT Relevant
ESC_PURORD	GTT_EVT_PO_IT_CF	PO Item Confirmation Event	Confirmation Event	<input type="checkbox"/>
ESC_PURORD	GTT_EVT_PO_IT_DE	PO Item Deletion Event	Deletion Event	<input type="checkbox"/>
ESC_PURORD	PCM10_ACKNOWL	Acknowledgement for Procurement Visibility	Acknowl. Proc. Visib.	<input type="checkbox"/>
ESC_PURORD	PCM10_PO_CHANGE	Purchase Order Changes for Procurement Visibility	PO Chg. Proc. Visib.	<input type="checkbox"/>

## Q8: How to deactivate or activate the application log?

Take the purchase order as an example, to deactivate the application log for application object types and event types, do the following:

- In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**.
- Choose activity **Define Used Business Process Types, Appl. Object Types and Event Types**.
- Choose the business process type “ESC\_PURORD”
- To deactivate the application log for application object types, double click **Define Application Object Types** on the left, then check the “Application Log Deactivation” box for application object types “GTT\_PO\_HD” and “GTT\_PO\_IT”. It will stop recording the application log for control parameter / planned events / tracking ID of the purchase order and its items.

Application ObjType	Seq. No.	Description	CI for GTT	Object Type	GTT Relev.	Log. Deac.	BO Setup Functor
GTT_PO_HD	10	Purchase Order Head for Procurement Visibility (GTT)	GTTAPPLOGS	BUS2012	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	PCM10_ITEM
GTT_PO_IT	10	Purchase Order Item for Procurement Visibility (GTT)	GTTAPPLOGS	BUS2012	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
PCM10_ITEM	0	Purchase Order Item for Procurement Visibility		BUS2012	<input type="checkbox"/>	<input type="checkbox"/>	

- e. To deactivate the application log for event types, double click **Define Event Types** on the left, then check the “Application Log Deactivation” box for event types “GTT\_EVT\_PO\_IT\_CF” and “GTT\_EVT\_PO\_IT\_DE”. It will stop recording the application log for actual events of the purchase order and its items.

Business Process Type	Event Type	Description	Text	GTTR	Log. Deac.	Seq. No.
ESC_PURORD	GTT_EVT_PO_IT_CF	PO Item Confirmation Event	Confirmation Event	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	10
ESC_PURORD	GTT_EVT_PO_IT_DE	PO Item Deletion Event	Deletion Event	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	10
ESC_PURORD	PCM10_ACKNOWL	Acknowledgement for Procurement Visibility	Acknwl. Proc. Visib.	<input type="checkbox"/>	<input type="checkbox"/>	0
ESC_PURORD	PCM10_PO_CHANGE	Purchase Order Changes for Procurement Visibility	PO Chg. Proc. Visib.	<input type="checkbox"/>	<input type="checkbox"/>	0

To activate the application log for application object types and event types, you can uncheck the “Application Log Deactivation” box.
