## 2204 Release:

1. Update [Appendix One](#)
2. Update Appendix Two
  - [Add Q2:How to add customized planned event types for GTT](#)

## 2203 Release:

1. Update [1.1](#) Check the SAP Version

## 2202 Release:

3. Update BC set file in the GitHub
4. Chapter [3.7](#) Maintain AOT Type Restriction for Cross-Processes
  - Add "Restr.ID": DL\_TO\_POIT (Cross process from Inbound Delivery to PO Item)
  - Add "Restr.ID": DL\_TO\_SOIT (Cross process from Outbound Delivery to SO Item)
  - Add "Restr.ID": SH\_TO\_ODLH (Cross process from Shipment to Outbound Delivery Header)
  - Add "Restr.ID": FU\_TO\_ODLH (Cross process from Freight Unit to Outbound Delivery Header)
  - Add "Restr.ID": FU\_TO\_ODLI (Cross process from Freight Unit to Outbound Delivery Item)
5. Chapter [3.8](#) Maintain Event Type Restriction for Cross-Processes
  - Add "Restr.ID": DL\_TO\_POIT
6. Chapter [4.6](#) Define GTT Extraction Functions
  - Add "Control Parameter Extractors": GTT\_POF\_PO\_HD\_OTE (Control Parameter Extractor for Purchase Order Header)
  - Add "Control Parameter Extractors": GTT\_POF\_PO\_IT\_OTE (Control Parameter Extractor for Purchase Order Item)
  - Add "Control Parameter Extractors": GTT\_SOF\_SO\_HD\_OTE (Control Parameter Extractor for Sales Order Header)
  - Add "Control Parameter Extractors": GTT\_SOF\_SO\_IT\_OTE (Control Parameter Extractor for Sales Order Item)
  - Add "Control Parameter Extractors": GTT\_SOF\_ODLV\_HD\_OTE (Control Parameter Extractor for Outbound Delivery Header)
  - Add "Control Parameter Extractors": GTT\_SOF\_ODLV\_IT\_OTE (Control Parameter Extractor for Outbound Delivery Item)
  - Add "Event Data Extractors": GTT\_POF\_PO\_IT\_CF (Actual Event PO Item Confirmation)
  - Add "Event Data Extractors": GTT\_POF\_PO\_IT\_DE (Actual Event PO Item Deletion)
  - Add "Event Data Extractors": GTT\_POF\_PO\_IT\_GR (Actual Event PO Item Goods Receipt)
  - Add "Event Data Extractors": GTT\_SOF\_ODLV\_GI (Actual Event Outbound Delivery Goods Issue)
  - Add "Event Data Extractors": GTT\_SOF\_ODLV\_IT\_PA (Actual Event Outbound Delivery Packing)
  - Add "Event Data Extractors": GTT\_SOF\_ODLV\_IT\_PI (Actual Event Outbound Delivery Picking)
  - Add "Event Data Extractors": GTT\_SOF\_ODLV\_IT\_POD (Actual Event Outbound Delivery POD)
  - Add "Planned Event Extractors": GTT\_POF\_PO\_HD\_EE (Selection of EEs for Purchase Order Header)
  - Add "Planned Event Extractors": GTT\_POF\_PO\_IT\_EE (Selection of EEs for Purchase Order Item)
  - Add "Planned Event Extractors": GTT\_SOF\_SO\_HD\_EE (Selection of EEs for Sales Order Header)
  - Add "Planned Event Extractors": GTT\_SOF\_SO\_IT\_EE (Selection of EEs for Sales Order Item)

- Add "Planned Event Extractors": GTT\_SOF\_ODLV\_HD\_EE (Selection of EEs for Outbound Delivery Header)
  - Add "Planned Event Extractors": GTT\_SOF\_ODLV\_IT\_EE (Selection of EEs for Outbound Delivery Item)
  - Add "Tracking ID Extractors": GTT\_POF\_PO\_HD\_TID (Tracking ID Extractor for Purchase Order Header)
  - Add "Tracking ID Extractors": GTT\_POF\_PO\_IT\_TID (Tracking ID Extractor for Purchase Order Item)
  - Add "Tracking ID Extractors": GTT\_SOF\_SO\_HD\_TID (Tracking ID Extractor for Sales Order Header)
  - Add "Tracking ID Extractors": GTT\_SOF\_SO\_IT\_TID (Tracking ID Extractor for Sales Order Item)
  - Add "Tracking ID Extractors": GTT\_SOF\_ODLV\_HD\_TID (Tracking ID Extractor for Outbound Delivery Header)
  - Add "Tracking ID Extractors": GTT\_SOF\_ODLV\_IT\_TID (Tracking ID Extractor for Outbound Delivery Item)
  - Add "GTT relevance function of AOT": GTT\_POF\_PO\_HD\_REL (AOT Relevance for Purchase Order Header)
  - Add "GTT relevance function of AOT": GTT\_POF\_PO\_IT\_REL (AOT Relevance for Purchase Order Item)
  - Add "GTT relevance function of AOT": GTT\_SOF\_SO\_HD\_REL (Appl. Object Type Relevance for Sales Order Header)
  - Add "GTT relevance function of AOT": GTT\_SOF\_SO\_IT\_REL (Appl. Object Type Relevance for Sales Order Items)
  - Add "GTT relevance function of AOT": GTT\_SOF\_ODLV\_HD\_REL (Appl. Object Type Relevance for Outbound Delivery Header)
  - Add "GTT relevance function of AOT": GTT\_SOF\_ODLV\_IT\_REL (Appl. Object Type Relevance for Outbound Delivery Items)
  - Add "GTT relevance function of Event Type": GTT\_POF\_PO\_IT\_CF\_REL (Relevance function for Actual event PO Item Confirmation)
  - Add "GTT relevance function of Event Type": GTT\_POF\_PO\_IT\_DE\_REL (Relevance function for Actual event PO Item Deletion)
  - Add "GTT relevance function of Event Type": GTT\_POF\_PO\_IT\_GR\_REL (Relevance function for Actual event PO Item Goods Receipt)
  - Add "GTT relevance function of Event Type": GTT\_SOF\_ODLV\_GI\_REL (Relevance function for Actual event Outbound Delivery Goods Issue)
  - Add "GTT relevance function of Event Type": GTT\_SOF\_ODLV\_PA\_REL (Relevance function for Actual event Outbound Delivery Packing)
  - Add "GTT relevance function of Event Type": GTT\_SOF\_ODLV\_PI\_REL (Relevance function for Actual event Outbound Delivery Picking)
  - Add "GTT relevance function of Event Type": GTT\_SOF\_ODLV POD\_REL (Relevance function for Actual event Outbound Delivery POD)
  - Add "AOID Extractor": GTT\_POF\_PO\_IT\_AOID (AOID Extractor for PO Item)
  - Add "AOID Extractor": GTT\_POF\_PO\_HD\_AOID (AOID Extractor for PO Header)
  - Add "AOID Extractor": GTT\_SOF\_AOID (AOID Extractor for Sales Order/Outbound Delivery)
7. Chapter [4.7](#) Define Used Business Process Types, Appl. Object Types and Event Types
- Add Scenarios configuration "Purchase Order -> Inbound Delivery -> Shipment"
  - Add Scenarios configuration "Purchase Order -> Inbound Delivery -> Freight Unit -> Road Freight Order / Ocean Booking / Air Booking"
  - Add Scenarios configuration "Sales Order -> Outbound Delivery -> Shipment"
  - Add Scenarios configuration "Sales Order -> Outbound Delivery -> Freight Unit -> Road Freight Order / Ocean Booking / Air booking"
8. Chapter [4.12](#) Purchase Order Extractor Configuration

11. Chapter [5](#) Configuration and Coding Guide – Advanced
  - Add Chapter [5.1](#) Coding Tips for Sales Order Relevant Extractor
12. Add [Appendix Two: FAQs](#)

## **2109 Release:**

[Appendix: Define the Unplanned Events for Freight Booking](#)

## **2108 Release:**

1. Update BC set file in the GitHub
2. Chapter [4.6](#) Define GTT Extraction Functions
  - Add "Tracking ID Extractors": GTT\_MIA\_IDLV\_HD\_TID (Tracking ID Extractor for Inbound Delivery Header)
  - Add "AOID Extractor": GTT\_MIA\_IDLV\_HD\_AOID (AOID Extractor for Inbound Delivery Header)
  - Add "AOID Extractor": GTT\_MIA\_IDLV\_IT\_AOID (AOID Extractor for Inbound Delivery Item)
  - Add "AOID Extractor": GTT\_MIA\_SHP\_HD\_AOID (AOID Extractor for Shipment Header)
  - Add "AOID Extractor": GTT\_STS\_AOID\_TOR (AOID Extractor for FU/FO/FB)
3. Chapter [4.13.1](#) Define Application Object Types for Inbound Delivery Header
  - Adjust "AOID Method" from "Determine from Field" to "Determine by Function"
  - Remove the value for fields "Cntl Tab. Type" and "AO ID Field"
  - Add "AOID Function" and set its value to "GTT\_MIA\_IDLV\_HD\_AOID"
  - Adjust "TrkID Method" from "Determine from Field" to "Determine by Function"
  - Remove the value for fields "Tr. ID Tab. Type", "Tracking ID Fld", "Tr. ID Code Set"
  - Add "Tr.ID Extractor" and set its value to "GTT\_MIA\_IDLV\_HD\_TID"
4. Chapter [4.13.2](#) Define Application Object Types for Inbound Delivery Item
  - Adjust "AOID Method" from "Determine from Field" to "Determine by Function"
  - Remove the value for fields "Cntl Tab. Type" and "AO ID Field"
  - Add "AOID Function" and set its value to "GTT\_MIA\_IDLV\_IT\_AOID"
5. Chapter [4.16.1](#) Define Application Object Types for Shipment Header
  - Adjust "AOID Method" from "Determine from Field" to "Determine by Function"
  - Remove the value for fields "Cntl Tab. Type" and "AO ID Field"
  - Add "AOID Function" and set its value to "GTT\_MIA\_SHP\_HD\_AOID"
6. Chapter [4.17.1](#) Define Application Object Types for Freight Unit Header
  - Adjust "AOID Method" from "Determine from Field" to "Determine by Function"
  - Remove the value for field "Cntl Tab. Type" and "AO ID Field"
  - Add "AOID Function" and set its value to "GTT\_STS\_AOID\_TOR"
7. Chapter [4.18.1](#) Define Application Object Types for Road Freight Order/Ocean/Air Booking Header
  - Adjust "AOID Method" from "Determine from Field" to "Determine by Function"
  - Remove the value for field "Cntl Tab. Type" and "AO ID Field"

- Add " AOID Function" and set its value to "GTT\_STS\_AOID\_TOR"

**2105 Release:**

Initial version.

# 1. Prerequisites

## 1.1 Check the SAP Version

The SAP Product Version for the global track and trace option of SAP Logistics Business Network, Version 2 shall be SAP EHP1 FOR SAP NETWEAVER 7.3 or higher.

The node “Interface to Global Track and Trace” in the IMG and the related GTT-specific versions of the IMG activities are available in the software component version SAP\_BW 750 from SP 12 on. They cannot be downloaded as a correction via note assistant. We recommend upgrading to the service package level accordingly.

The ABAP codes on Github to support Fulfillment Tracking apps for GTT Version 2 shall be implemented in S4 HANA 1909 SP03 on premise that is not validated in lower release, and not applicable for ECC series of products.

The following SAP NOTES shall be implemented.

[2370356 - SAP Global Track and Trace Application Interface](#)

[2937175 - Enhancement of IDOCs sent to GTT](#)

[2974952 - Error in Note 2937175](#)

[2959576 - Amendments to EM API for LBNTT2.0](#)

[3010748 - Allow unexpected events without location reference in TransportationEventBulkNotification](#)

## 1.2 Log on the Development Client to Configure BTE

1.2.1 Ensure you have development access to the client for cross-client customizing and local development.

1.2.2 Log on to the client and enter transaction code (T-code): FIBF.

1.2.3 Click **More->Settings -> Identification -> SAP Applications**.

1.2.4 Position on the Application ID: **PI-EM**. Check the field **Application Active**.

Appl.	A	Text

<input type="checkbox"/>	<input checked="" type="checkbox"/>	PM-BW Instandhaltung-BW
<input type="checkbox"/>	<input checked="" type="checkbox"/>	PM-EQM Instandhaltung, Equipment

1.2.5 Click **Save**.

## 2. Download ABAP Code from GitHub

### 2.1 Initial Download ABAP Code from GitHub

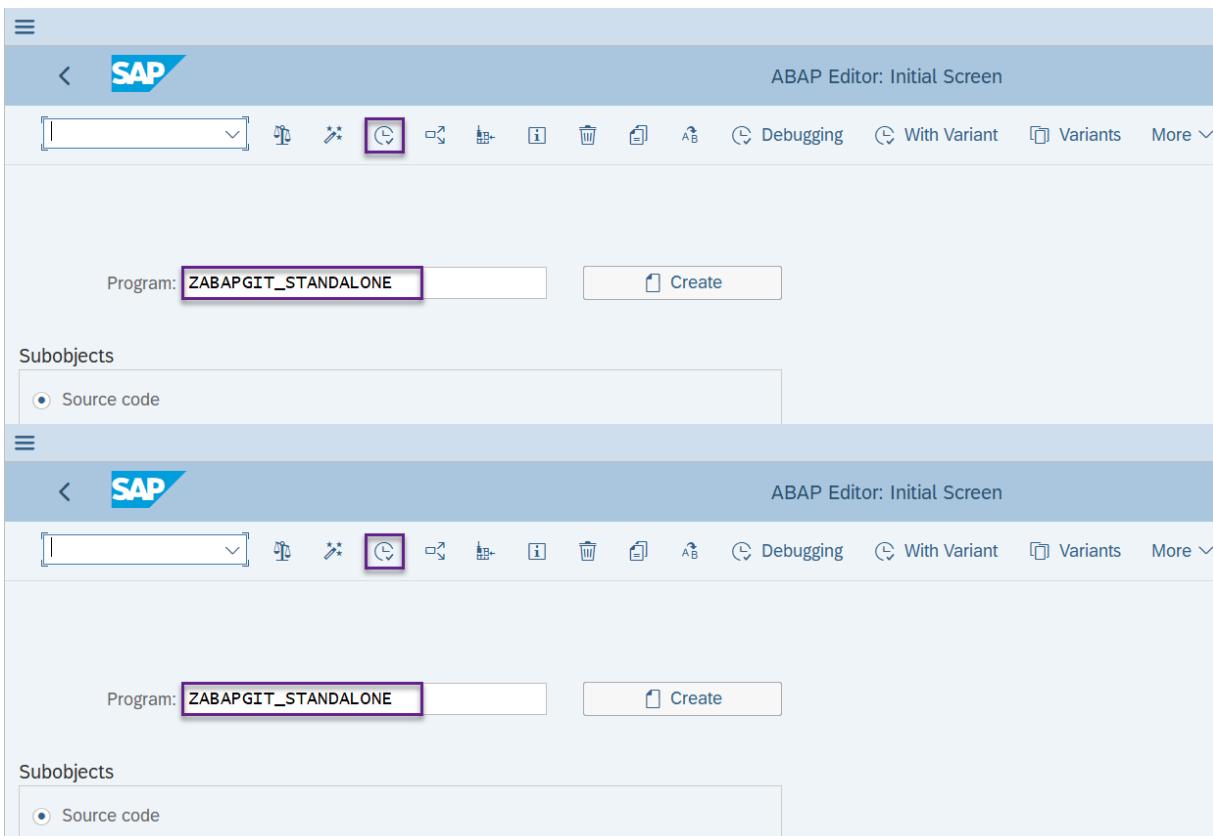

#### 2.1.1 Install ABAPGit

You need to install ABAPGit before downloading the codes from GitHub. To install ABAPGit, follow the instructions on <https://docs.abapgit.org/guide-install.html>. Make sure you **Install the standalone version** in your dev system. When installation is complete, a new report is created, `ZABAPGIT_STANDALONE`.

The screenshot shows the abapGit documentation website. The header reads "abapGit · documentation". The left sidebar has sections for "Getting Started" (Installation, Upgrading, Uninstalling, UI features), "Setup" (SSL setup, Global settings, Personal settings), "Online Projects" (Installing online repo, Keeping code up to date, Uninstall repository, First project, Moving package into git, Contributing to a project, Authentication), "Offline Projects" (Installing offline repo, Import ZIP, Export ZIP), and "Reference" (Repo Settings (.abapgit.xml), Translations and i18n, Repo Statistics). The main content area is titled "Installation". It includes a "Summary" section stating that abapGit exists in two flavours: *standalone* version or *developer* version. It lists two bullet points: 1. The standalone version is targeted at users. It consists of one (huge) program which contains all the needed code. You run the standalone version in transaction `SE38`, executing the program you created. 2. The developer version is targeted at developers contributing to the abapGit codebase. It consists of all the ABAP programs/classes/interfaces/etc. of the abapGit project. You run the developer version with transaction `ZABAPGIT`. Below this is a "Prerequisites" section noting SAP BASIS version 702 or higher. A callout box titled "Install Standalone Version" provides step-by-step instructions: 1. Download the ABAP code (right click -> save-as) to a file. 2. Via `SE38` or `SE80`, create a new report named `ZABAPGIT_STANDALONE` (formerly `ZABAPGIT_FULL`). Note: Do *not* use the name `ZABAPGIT` if you plan to install the developer version. 3. In source code change mode, upload the code from the file using Utilities -> More Utilities -> Upload/Download -> Upload. 4. Activate. It also notes that typically, abapGit will only be used in the development system, so it can be installed in a local \$ package (e.g. `$ZABAPGIT`). Finally, it states that you can now use abapGit by executing the report in transaction `SE38`.

#### 2.1.2 Download ABAP Code from GitHub

2.1.2.1 Enter T-code `SE38` and fill in the report name from [2.1.1](#), `ZABAPGIT_STANDALONE`. Click **Execute** to run the report.

### 2.1.2.2 Click **New Online** to download the code.

**Online repositories**

- To clone a remote repository (e.g. from github) click **New Online** from the top menu. This will link a remote repository with a package on your system.
- Use the pull button to retrieve and activate the remote objects.
- If the remote repository is updated, you will see the changes and can pull to apply the updates.

**Offline repositories**

- To add a package as an offline repository, click **New Offline** from the top menu.
- abapGit will start tracking changes for the package without linking it to an online git repository.
- You can link the package later or just export the package content as a ZIP file.

**Repository list and favorites**

- To favorite a repository, use the **★** icon in the repository list.
- To go to a repository, click on the repository name.
- To go back to your favorites, use the **Repository List**.
- Explore** to find projects using abapGit

### 2.1.2.3 Fill in the **Git Repository URL**.

<https://github.com/SAP-samples/logistics-business-network-gtt-standardapps-samples.git>

2.1.2.4 Fill in the **Package** where you want to create the new ABAP code. If the package does not exist yet, click **Create package** to create it. Set **Full** for **Folder Logic**. Click **Clone Online Repo** to download the code.

**abapGit**

2.1.2.5 Assign the change to a change request. If you do not have any available change requests, you need to create a new one.

### 2.1.2.6 Click **Pull** to pull down the code of the latest version.

The screenshot shows the SAP abapGit interface. At the top, there's a toolbar with icons for Selections, Edit, Goto, System, Help, and various file operations. Below the toolbar, the title bar says "abapGit" and "Repository". The main area is titled "GTT-V2-Standard-Apps" with the URL "https://SAP-samples/logistics-business-network-gtt-standardapps-samples.git" and a commit ID "b19790". A navigation bar at the top right includes "Pull", "Stage", "Diff", "Branch", "Tag", "Advanced", "View", "Refresh", and a gear icon for settings. The main content area is a table with columns "Type", "Name", and "Path". The "Type" column shows mostly "CLAS" (classes). The "Name" column lists class names like "ZCL\_GTT\_MIA\_AE\_FILLER\_DLH\_GR", "ZCL\_GTT\_MIA\_AE\_FILLER\_DLH\_PA", etc. The "Path" column shows the full ABAP path for each class. On the far right of the table, there are "diff" buttons for each row.

### 2.1.2.7 After you download the code, you can check it with T-code **SE80**.

## 2.2 Update ABAP Code from GitHub

In each release, there are some changes in the public sample codes. To update your local sample codes of Fulfillment Tracking apps after a future release, do the following:

### 2.2.1 Update ABAP Code from GitHub

2.2.1.1 Enter T-code **SE38** and fill in the report name **ZABAPGIT\_STANDALONE**. Click the **Execute** icon to run the report.

The screenshot shows the SAP ABAP Editor: Initial Screen. The title bar says "SAP" and "ABAP Editor: Initial Screen". The toolbar includes icons for search, copy, paste, and execute. Below the toolbar, there's a search field and a "Create" button. The main area has a "Program:" field containing "ZABAPGIT\_STANDALONE" and a "Create" button. Underneath, there's a "Subobjects" section with a list of options: "Source code" (selected), "Variants", "Attributes", "Text elements", and "Documentation".

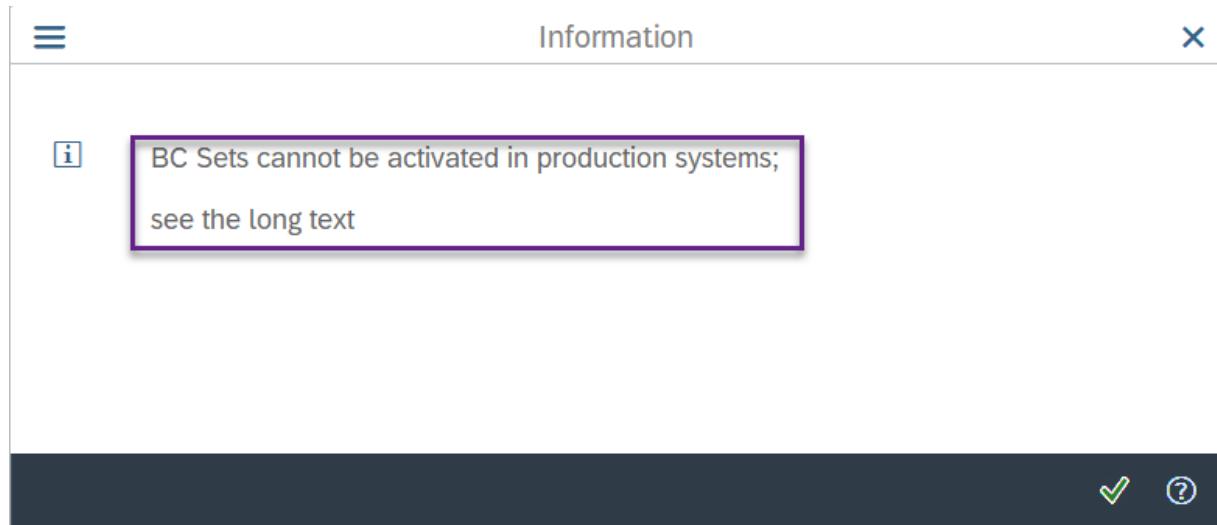

2.2.1.2 To access the Fulfillment Tracking apps' repository, click the button.

2.2.1.3 Click **Pull** to pull down the latest version code.

### 3. Configuration Option 1 (Import BC Set + Manual Configuration)

#### Prerequisite:

For this option, you must build up the system environment WITHOUT a production client for preparation. If you try to import the BC set into the system with a production client, an error will pop up.

The screenshot shows the SAP Performance Assistant interface. At the top left is a menu icon. In the center is the title "Performance Assistant". At the top right is a search bar with a magnifying glass icon. Below the title is a toolbar with several icons: back, forward, refresh, etc. The main area contains the following text:  
**BC Sets cannot be activated in production systems; see the long text**  
Message no. SCPR229  
**Diagnosis**  
You tried to activate BC Sets in a system with at least one production client. This is not allowed. You can only activate Business Configuration Sets in systems with no production client.  
**System Response**  
The procedure was cancelled. No data was written into customizing tables.  
**Procedure**  
Activate the BC Set in a test system.

### 3.1 Download BC Set from GitHub

3.1.1 Navigate to BC Set in [https://github.com/SAP-samples/logistics-business-network-gtt-standardapps-samples/blob/main/lbn-gtt-standard-app/BCset/ZGTT\\_CONF.bcs](https://github.com/SAP-samples/logistics-business-network-gtt-standardapps-samples/blob/main/lbn-gtt-standard-app/BCset/ZGTT_CONF.bcs).

### 3.1.2 Click on “Raw” button.

### 3.1.4 Change file extension to “.bcs”.

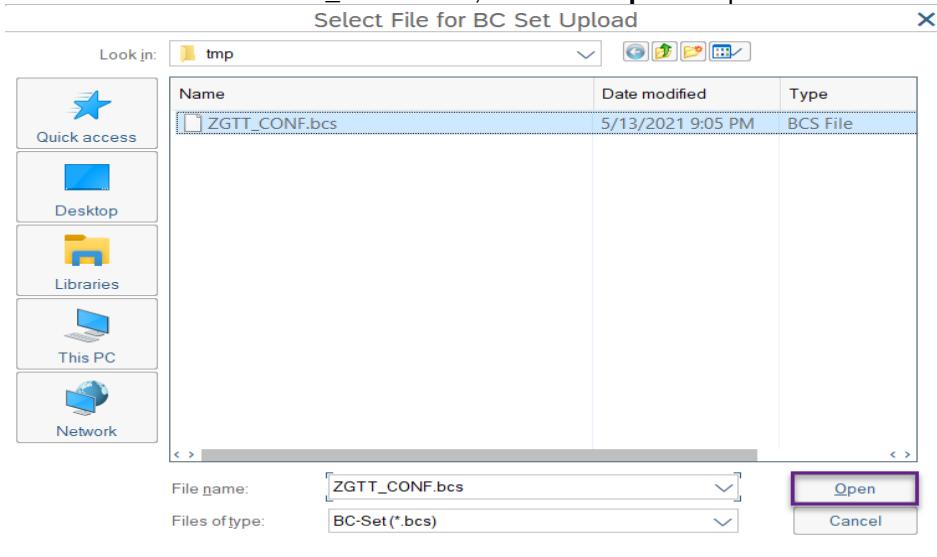

## 3.2 Import BC Set

3.2.1 From SAP Easy Access Menu, **Tools -> Customizing -> Business Configuration Sets -> Display and Maintain BC Sets** (Transaction Code SCPR3).

### 3.2.2 Select Upload BC Set.

3.2.3 Select the file "ZGTT\_CONF.bcs", then click **Open** to upload the BC set to your development system.

All of the configurations are loaded in the system.

The screenshot shows the SAP Business Configuration Sets: Change interface. The top navigation bar includes the SAP logo and tabs for 'List Off' and 'More'. The main area displays the 'BC Set ID: ZGTT\_CONF' and its 'Short Text: GTT Standard APP Configuration'. On the left, there's a 'No Favorites List' and a search bar. The central pane shows the configuration tree under 'GTT Standard APP Configuration (ZGTT\_CONF)', which includes nodes for 'Define Logical System', 'Define Used Business Process Types, Appl. Object Ty...', 'Define SAP GTT Extraction Functions', and 'Define CI Tenant for SAP GTT'. To the right, the 'IMG Activity' is set to 'Define Logical System' and the 'Customizing Object' is 'Logical Systems'. A table titled 'Tables and Views for Selected Customizing Object' lists 'V\_TBDLS' as the 'Table/View' and 'Logical Systems' as the 'Text'. Below this, a table titled 'Data Records' shows a single entry for 'GTTAPPLOGS' with the logical system name 'Logical System for GTT Standard APP'. Buttons for 'Other Tables' and 'Delete Table' are also present.

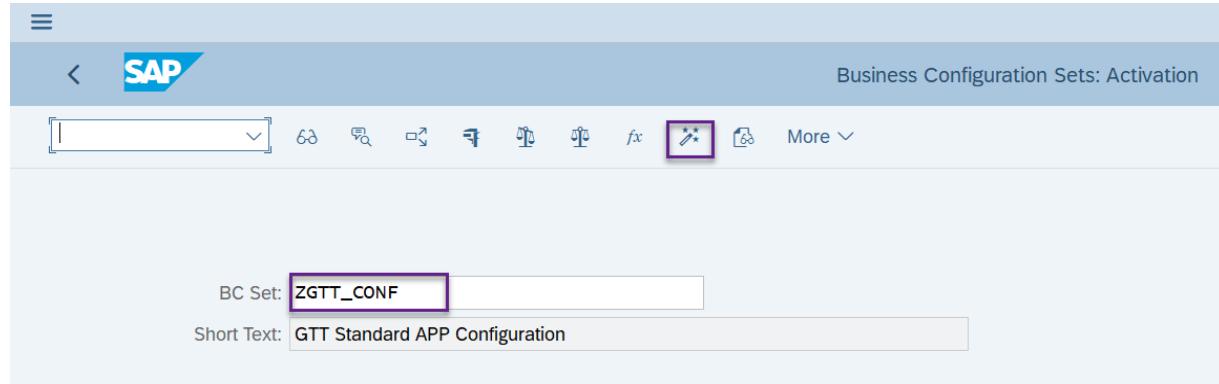

3.2.4 Click **Save** to save the BC Set.

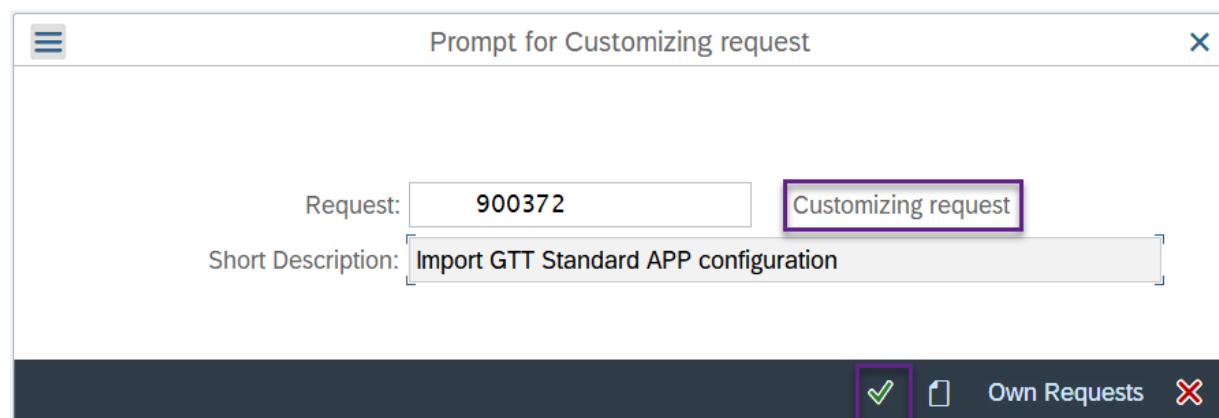

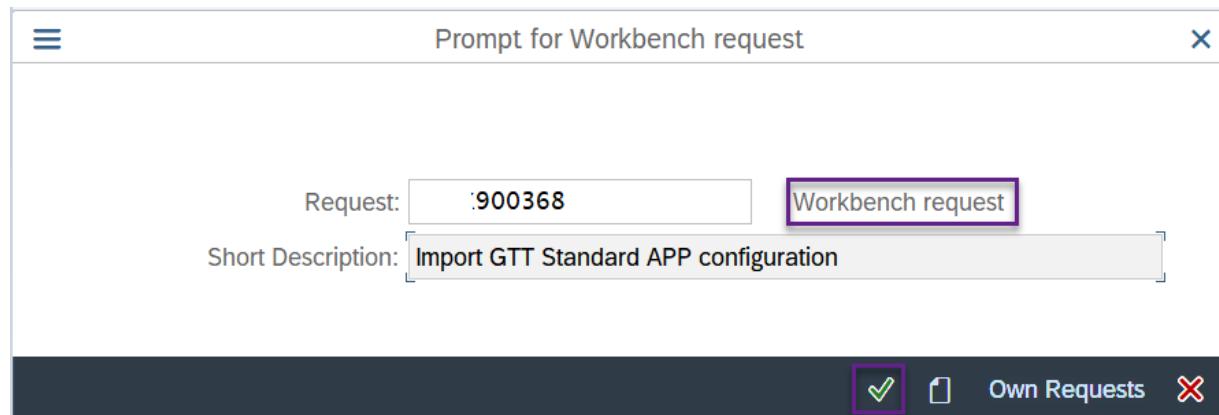

### 3.3 Activate BC Set

3.3.1 From SAP Easy Access Menu, **Tools** -> **Customizing** -> **Business Configuration Sets** -> **Activation of BC Sets** (Transaction Code SCPR20).

3.3.2 Enter the name of the BC Set and select **Activate**.

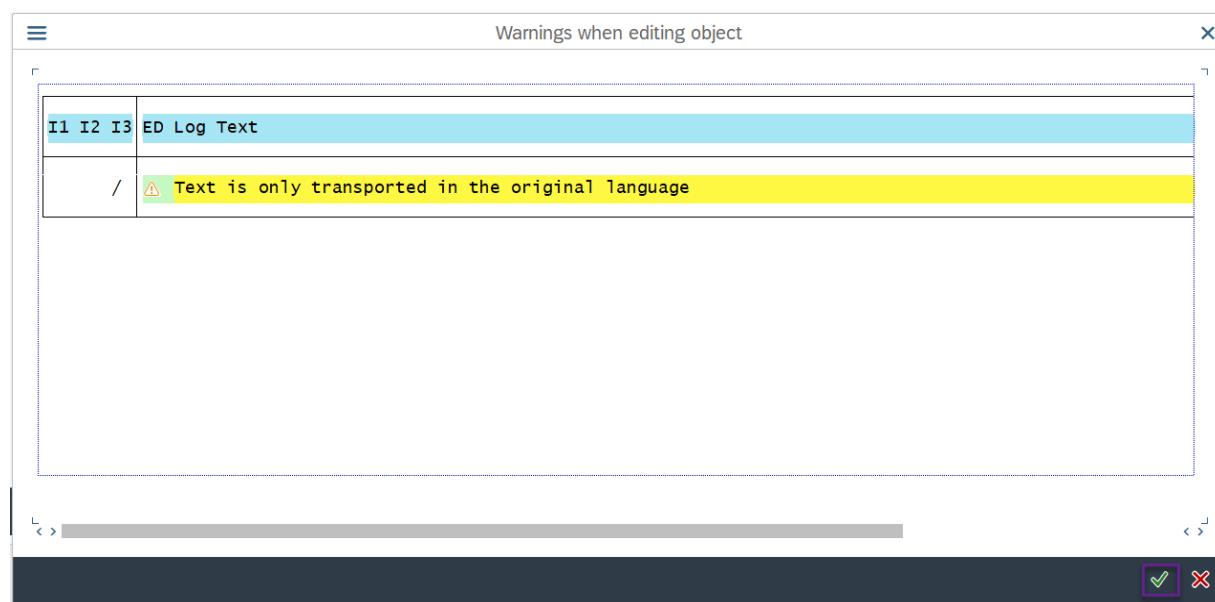

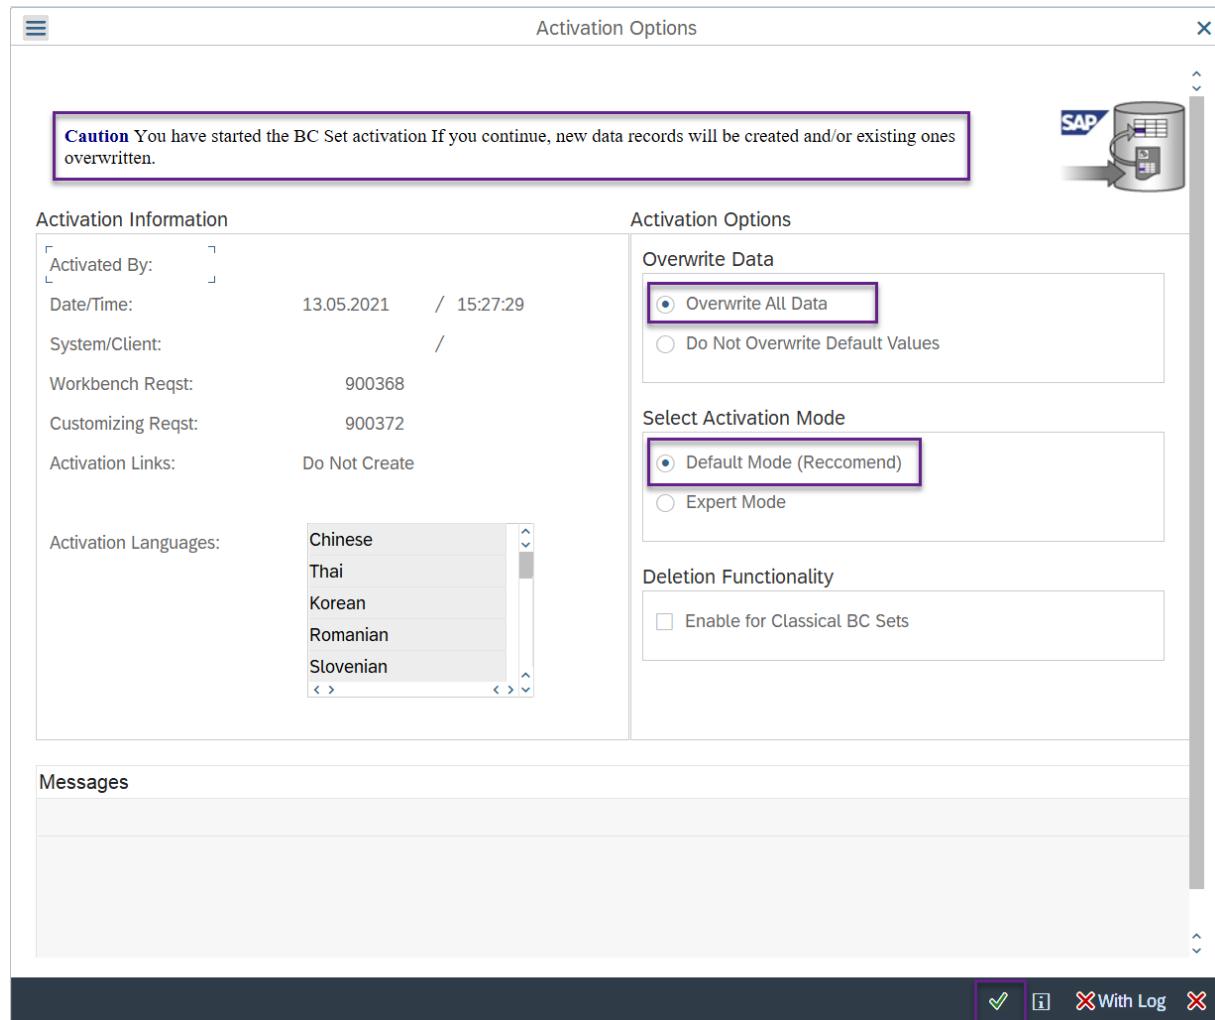

3.3.3 Provide a Workbench request and a Customizing request.

3.3.4 Various activation options are available. Choose appropriate ones and click **Continue** to proceed with the activation.

The following message is displayed:

**Caution** You have started the BC Set activation If you continue, new data records will be created and/or existing ones overwritten."

3.3.5 BC Set is activated and BC set data is stored in the customization tables.

Activation ended with warning [View details](#)

3.3.6 Click **Activation Logs** to check the logs.

## 3.4 Define RFC Connection for GTT

3.4.1 Log on to the business client, enter T-code **SPRO** and then click **SAP Reference IMG** to open **Display IMG** page.

3.4.2 Click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define System Configuration**. Choose activity: **Define RFC Connection for SAP GTT**

3.4.3 Choose **HTTP Connections to External Server**, click **Create** to create a new RFC connection.

The screenshot shows the SAP Reference IMG interface with the title 'Configuration of RFC Connections'. At the top, there are three buttons: 'Generate RFC Callback Allowlist', 'Activate Non-Empty Allowlists', and 'Allowlist for Dynamic'. Below the buttons, a message 'RFC callback check not secure' is displayed. Underneath, there is a toolbar with icons for refresh, search, create (highlighted with a purple border), edit, details, and delete. A table titled 'RFC Connections' lists several connection types with their corresponding Type (3, G, H, I, L) and PL Active status. The 'HTTP Connections to External Server' row is also highlighted with a purple border.

RFC Connections	Type	PL Active	Comment
> ABAP Connections	3		
> HTTP Connections to External Server	G		
> HTTP Connections to ABAP System	H		
> Internal Connections	I		
> Logical Connections	L		

3.4.4 Fill in the **Destination** and choose the **Connection Type**: “**G-HTTP connection to external server**”.

The screenshot shows the 'Create Destination' dialog box. It has fields for 'Destination' (containing 'GTT\_APP\_RFC') and 'Connection Type' (set to 'G HTTP connection to external server'). At the bottom, there are two buttons: a green checkmark and a red X.

3.4.5 Enter a description. In the **Technical Settings** tab, fill in the **Host**, **Port** and **Path Prefix**.

For example, the URL of solution owners is as follows:

<https://xxxxxx.gtt-flp-lbnplatform-pre-live.cfapps.eu10.hana.ondemand.com/>

**Host:** xxxx.gtt-flp-lbnplatform-pre-live.cfapps.eu10.hana.ondemand.com

**Port:** 443

**Path Prefix:** /api/idoc/em/v1/TrackedProcessAndEvent

The screenshot shows the SAP Fiori launchpad interface. At the top, there is a blue header bar with the SAP logo and a back arrow icon. Below the header, the title "RFC Destination GTT\_APP\_RFC" is displayed. On the left side, there is a search bar with a dropdown arrow and a "Connection Test" button. To the right of the search bar are "More" and "Description" buttons.

The main content area contains the following fields:

- RFC Destination:** GTT\_APP\_RFC
- Connection Type:** G (selected) - HTTP Connection to External Server
- Description:** A section with three input fields:
  - Description 1: RFC for GTT Standard APP
  - Description 2: (empty)
  - Description 3: (empty)
- Administration** (button)
- Technical Settings** (button, highlighted with a purple border)
- Logon & Security** (button)
- Special Options** (button)

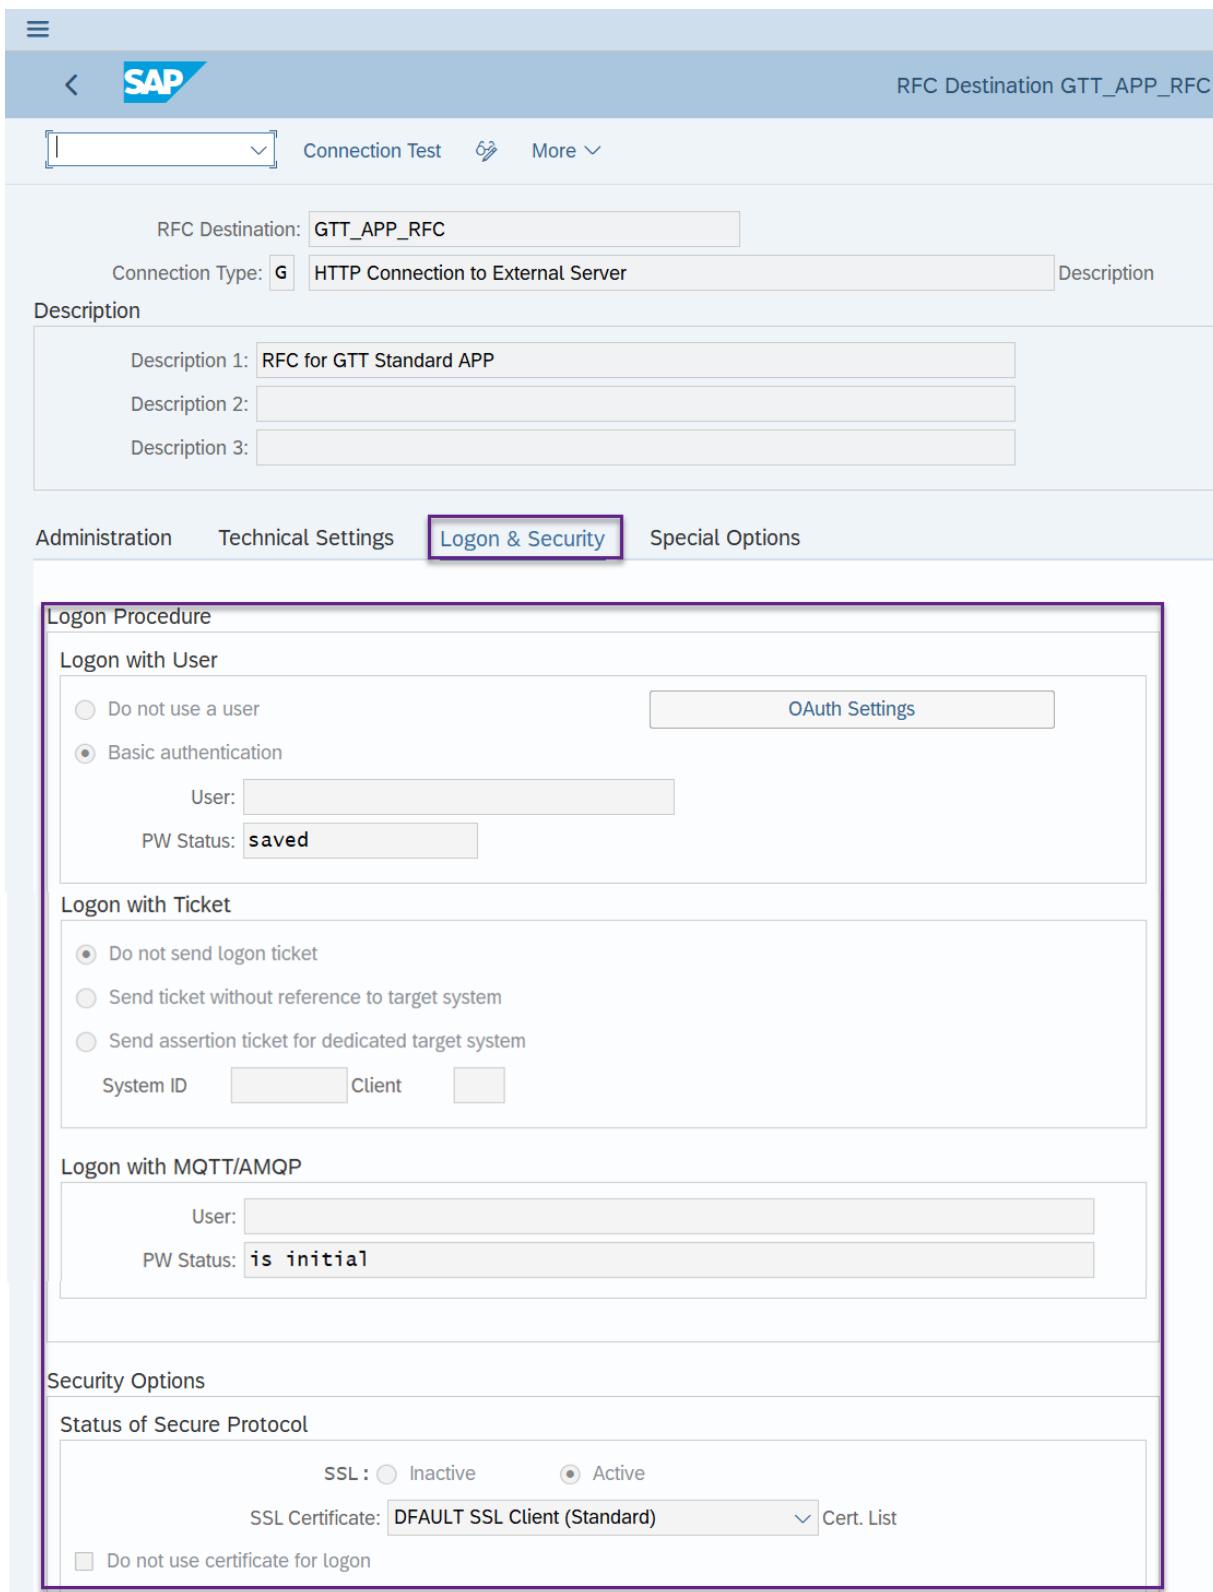

Below the main content, there is a section titled "Target System Settings" with the following fields:

- Host:** (input field)
- Port:** 443 (input field)
- Path Prefix:** /api/idoc/em/v1/TrackedProcessAndEvent (input field, highlighted with a purple border)

### 3.4.6 In the **Logon & Security** tab, enter the Logon information.

For the basic authentication, the GTT technical user / password is needed. You can get this from your GTT administrator.

Also, SSL must be **Active**. The recommended SSL Certificate is: DEFAULT SSL Client (Standard).

The screenshot shows the SAP Fiori interface for configuring an RFC destination. The top navigation bar includes a back arrow, the SAP logo, and the title "RFC Destination GTT\_APP\_RFC". Below the title are buttons for "Connection Test" and "More". The main configuration area starts with "RFC Destination: GTT\_APP\_RFC" and "Connection Type: G HTTP Connection to External Server". A "Description" section follows, containing three input fields: "Description 1: RFC for GTT Standard APP", "Description 2:", and "Description 3:". Below this is a tab navigation bar with "Administration", "Technical Settings", "Logon & Security" (which is highlighted with a purple border), and "Special Options". The "Logon & Security" tab contains several sections: "Logon Procedure" (with "Logon with User" and "Logon with Ticket" options), "Logon with MQTT/AMQP", and "Security Options" (including "Status of Secure Protocol" with SSL settings). The "Logon with User" section has "Basic authentication" selected, showing fields for "User" and "PW Status: saved". The "Logon with Ticket" section has "Do not send logon ticket" selected. The "Logon with MQTT/AMQP" section shows "User:" and "PW Status: is initial". The "Security Options" section shows "SSL : Active" and "SSL Certificate: DEFAULT SSL Client (Standard)".

### 3.4.7 Save the configuration.

## 3.5 Define Ports

3.5.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> IDoc Settings**. Choose activity **Define Ports**.

3.5.2 Choose **XML HTTP** folder, and click **Create** to create a new port **GTTAPPPORT**.

3.5.3 Fill in the **RFC Destination**.

3.5.4 Choose **Content Type** as *application/x-sap.idoc*

3.5.5 Choose **HTTP Version** as Version 1.0. Mark it as **SOAP Protocol**.

The screenshot shows the SAP IMG interface with the title "Ports in IDoc processing". On the left, there is a tree view under "Ports" with categories like "Ports", "Transactional RFC", "File", "ABAP-PI", "XML File", and "XML HTTP". Under "XML HTTP", the port "GTTAPPPORT" is selected and highlighted with a purple border. The main right panel displays configuration details for this port:

- Port:** GTTAPPPORT
- Description:** Port for GTT Standard APP
- RFC Destination:** GTT\_APP\_RFC
- Content Type:** application/x-sap.idoc (selected)
- HTTP Version:** Version 1.0 (selected)
- SOAP Protocol:** (checkbox checked)
- Port Options:** A table with two rows:

Description	Value
No Initial Values for DATS, TIMS, NUMC for Alignment	<input type="checkbox"/>
Send Dynamic Enhancement Segments	<input type="checkbox"/>

3.5.6 Save the configuration.

## 3.6 Define Partner Profiles

3.6.1 In Display IMG page, unfold **Integration with Other SAP Components -> Interface to Global Track and Trace -> IDoc Settings**. Choose activity **Define Partner Profiles**.

3.6.2 Choose **Partner Type LS** folder, and click **Create** to create a new partner profile.

### 3.6.5 Fill in the Message Type GTTMSG and Fill in the Receiver Port that you created in [3.5](#).

The screenshot shows the SAP Fiori interface for configuring partner profiles. The top navigation bar displays 'SAP' and 'Partner profiles: Outbound parameters'. The main content area is titled 'GTTAPPLOGS' and includes fields for 'Logical System for GTT Standard APP', 'Type: LS', and 'Logical system'. Under 'Outbound Options', the 'Message Type' is set to 'GTTMSG'. In the 'Output Mode' section, 'Pass IDoc Immediately' is selected. The 'IDoc Type' section shows 'Basic Type: GTTMSG01' and 'Extension:'. A note indicates 'LBN-TT: Process and Event Posting'. At the bottom, there are checkboxes for 'Cancel Processing After Syntax Error', 'Seg. release in IDoc type:', and 'Application Release:'.

### 3.6.6 Save the configuration.

## 3.7 Maintain AOT Type Restriction for Cross-Processes

### Prerequisite:

ABAP code and BC set should be activated in the system.

The following entries should be maintained in transaction “ZGTT\_AOTYPE\_RST - AOT Types Restrictions” for Cross-Processes tracking scenario.

Restr.ID	Restr.Pos	Option	Sign	Application Obj.Type
FU_TO_IDLH	001	Equal To	Include	GTT_IDLV_HD

## 3.8 Maintain Event Type Restriction for Cross-Processes

### Prerequisite:

ABAP code and BC set should be activated in the system.

The following entry should be maintained in transaction “ZGTT\_EVTTYPE\_RST – Event Types Restrictions” for Cross-Processes tracking scenario.

Restr.ID	Restr.Pos	Option	Sign	Event Type
DL_TO_POIT	001	Equal To	Include	GTT_EVT_PO_IT_CF

## 4. Configuration Option 2 (Manual Configuration)

### 4.1 Define RFC Connection for GTT

4.1.1 Log on to the business client, enter T-code SPRO and then click **SAP Reference IMG** to open **Display IMG** page.

4.1.2 Click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define System Configuration**. Choose activity: **Define RFC Connection for SAP GTT**

4.1.3 Choose **HTTP Connections to External Server**. Click **Create** to create a new RFC connection.

The screenshot shows the SAP Reference IMG interface with the title 'Configuration of RFC Connections'. A message 'RFC callback check not secure' is displayed. Below it, there are icons for refresh, search, create (highlighted with a purple border), edit, details, and delete. A table lists RFC Connections with columns for Type (3, G, H, I, L), PL Active, and Comment. The 'HTTP Connections to External Server' item is selected in the tree view.

RFC Connections	Type	PL Active	Comment
> ABAP Connections	3		
> HTTP Connections to External Server	G		
> HTTP Connections to ABAP System	H		
> Internal Connections	I

The "Logon & Security" tab contains several sections: "Logon Procedure", "Logon with User" (with radio buttons for "Do not use a user" and "Basic authentication" selected, and fields for "User" and "PW Status: saved"), "Logon with Ticket" (with radio buttons for "Do not send logon ticket" and "Send ticket without reference to target system" selected, and fields for "System ID" and "Client"), "Logon with MQTT/AMQP" (with fields for "User" and "PW Status: is initial"), and "Security Options". Under "Security Options", the "Status of Secure Protocol" section shows "SSL: Active" (radio button selected) and "SSL Certificate: DEFAULT SSL Client (Standard)" (dropdown selected). A checkbox "Do not use certificate for logon" is also present.

4.1.7 Save the configuration.

## 4.2 Define Logical System

4.2.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define System Configuration**. Choose activity **Define Logical System**.

4.2.2 Create **New Entries** to create a new Logical System, fill in the Logical System code and Name of the new logical system.

The screenshot shows the SAP Fiori interface for the 'Logical Systems' overview. The title bar reads 'Display View "Logical Systems": Overview'. Below the title bar is a toolbar with icons for search, refresh, and more options. The main area is titled 'Logical Systems' and contains a table with two columns: 'Log.System' and 'Name'. A single row is visible, showing 'GTTAPPLOGS' in the Log.System column and 'Logical System for GTT Standard APP' in the Name column. The entire row is highlighted with a purple border.

Log.System	Name
GTTAPPLOGS	Logical System for GTT Standard APP

4.2.3 Save the configuration.

## 4.3 Define Ports

4.3.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> IDoc Settings**. Choose activity **Define Ports**.

4.3.2 Choose **XML HTTP** folder, and click **Create** to create a new port **GTTAPPPORT**.

4.3.3 Fill in the **RFC Destination**.

4.3.4 Choose **Content Type** as *application/x-sap.idoc*

4.3.5 Choose **HTTP Version** as Version 1.0. Mark it as **SOAP Protocol**.

The screenshot shows the SAP IMG interface for defining ports. On the left, a tree view shows categories like Ports, Transactional RFC, File, ABAP-PI, XML File, and XML HTTP. Under XML HTTP, the port **GTTAPPPORT** is selected, highlighted with a purple border. The main panel displays configuration details for this port:

- Port:** GTTAPPPORT
- Description:** Port for GTT Standard APP
- RFC Destination:** GTT\_APP\_RFC
- Content Type:** application/x-sap.idoc (selected)
- HTTP Version:** Version 1.0 (selected)
- SOAP Protocol:** (checkbox checked)
- Port Options:** A table with two rows:

4.3.6 Save the configuration.

## 4.4 Define Partner Profiles

4.4.1 In Display IMG page, unfold Integration with Other SAP Components -> Interface to Global Track and Trace -> IDoc Settings. Choose activity Define Partner Profiles.

4.4.2 Choose Partner Type LS folder, and click Create to create a new partner profile.

The screenshot shows the SAP Fiori interface for managing partner profiles. On the left, there is a tree view under 'Partner Profiles' with various categories like Partner Type AD, B, BP, GP, KU, LI, LS, and US. The 'Partner Type LS' node is selected and highlighted with a purple border. On the right, there are several input fields and tabs. The 'Post Processing: Valid Processors' tab is active. It contains fields for 'Partner No.' (with placeholder 'GTTAPPLOGS'), 'Type' (with placeholder 'LS'), 'Ty.:' (with placeholder 'US'), 'Processor:' (with placeholder 'User'), and 'Lang.: (with placeholder 'EN'). Below these fields is a table titled 'Outbound' with columns for 'Partner Role', 'Message Type', 'Message Variant', 'Function', 'Test', 'Receiver Port', 'I...', 'Pac...', and 'Basic Type'. There are three rows in the table, each with a small circular icon and a delete button. At the bottom of the table are icons for search, add, and delete.

4.4.3 Fill in the **Partner No.** that you created and fill in the **Processor** information.

This screenshot shows the detailed view of the partner profile 'GTTAPPLOGS'. The top section displays the partner number 'GTTAPPLOGS' and type 'LS'. Below this, the 'Post Processing: Valid Processors' tab is active, showing the processor information: 'Ty.:' is 'US', 'Processor:' is 'User', and 'Lang.: EN'. The 'Outbound' table at the bottom is empty, with no rows visible.

4.4.4 Click **Add** under the **Outbound** box to create a new outbound parameter.

## 4.5 Define CI Tenant for GTT

4.5.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**.

Choose activity **Define CI Tenant for SAP GTT**.

4.5.2 Click **New Entries** to create a new CI tenant for GTT, fill in the information for the new CI tenant. The **CI Log. System** is the logical system you created in [4.2](#).

The top screenshot shows the 'Change View "SAP Global Track & Trace Definitions": Overview' screen. It has a toolbar with a search bar, a 'New Entries' button (which is highlighted with a purple box), and other icons. Below the toolbar is a table header with columns: CI for Global Track & Trace, CI Log. System, SAP Track & Trace Version, and Description.

The bottom screenshot shows the 'Display View "SAP Global Track & Trace Definitions": Overview' screen. It has a similar toolbar and table header. A specific row is selected, showing 'GTTAPPLOGS' in the CI Log. System column and 'GTT2.0 Logistics Business Network - Track and Trace' in the SAP Track & Trace Version column. The 'Description' column for this row contains the value 'CI Tenant for GTT Standard APP'.

## 4.6 Define GTT Extraction Functions

### Prerequisite:

You have already installed ABAPGit and downloaded the code of Fulfillment Tracking apps in your development system.

4.6.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**. Choose activity **Define SAP GTT Extraction Functions**.

4.6.2 Choose the type of extraction function you want to create from the **Dialog Structure**, and click **New entries**.

This screenshot shows the 'Change View "GTT Relevance Functions (App. Obj. Types)": Overview' screen. On the left, there is a 'Dialog Structure' sidebar with a tree view. The 'GTT Relevance Functions (App. Obj. Types)' node is expanded, showing several sub-nodes like 'Planned Event Extractors', 'Control Parameter Extractors', etc. To the right of the sidebar is a table titled 'GTT Relevance Functions (App. Obj. Types)'. The table has three columns: 'Function', 'Function Module', and 'Description'. There are several rows in the table, each represented by a small grey square icon in the 'Function' column.

4.6.3 Input the **Function name** and **Function Module** for the newly created extraction function.

## 4.7 Define Used Business Process Types, Appl. Object Types and Event Types

4.7.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface.**

Choose activity **Define Used Business Process Types, Appl. Object Types and Event Types.**

4.7.2 You can create event types and application object types for each business process type.

The following sections from 4.8 to 4.11 only demonstrate how to configure relevant objects. For actual configuration, refer to the scenarios configuration listed below.

Scenarios configuration:

1) Purchase Order -> Inbound Delivery -> Shipment.

For this scenario, see the following configurations:

- [4.12](#) Purchase Order Extractor Configuration
- [4.13](#) Inbound Delivery Extractor Configuration
- [4.16](#) Shipment Extractor Configuration

2) Purchase Order -> Inbound Delivery -> Freight Unit -> Road Freight Order / Ocean booking / Air Booking.

For this scenario, see the following configurations:

- [4.12](#) Purchase Order Extractor Configuration
- [4.13](#) Inbound Delivery Extractor Configuration
- [4.17](#) Freight Unit Extractor Configuration
- [4.18](#) Road Freight Order/Ocean Booking/Air booking Extractor Configuration

3) Sales Order -> Outbound Delivery -> Shipment.

For this scenario, see the following configurations:

- [4.14](#) Sales Order Extractor Configuration
- [4.15](#) Outbound Delivery Extractor Configuration
- [4.16](#) Shipment Extractor Configuration

4) Sales Order -> Outbound Delivery -> Freight Unit -> Road Freight Order / Ocean Booking / Air Booking.

For this scenario, see the following configurations:

- [4.14](#) Sales Order Extractor Configuration
- [4.15](#) Outbound Delivery Extractor Configuration
- [4.17](#) Freight Unit Extractor Configuration
- [4.18](#) Road Freight Order/Ocean Booking/Air Booking Extractor Configuration

## 4.8 Define Application Object Types for Header Level Extractor

4.8.1 As an example of AOT type's header level tracking introduction, choose the business process type ESC\_DELIV from the **Define Used Business Process Types** on the right side.

Double click **Define Application Object Types**.

Bus. Proc. Type	Update Mode	BPT Process Mode	Description
ESC_DELIV	Update Task (V1)	Active	Delivery in SAP R/3 Enterprise
ESC_FI_CLEARING	Update Task (V1)	Active	FI Clearing in SAP R/3 Enterprise

4.8.2 Click **New Entries** to create a new Application Object Type.

4.8.3 Fill in the **Application Object Type** and **Text** fields.

4.8.4 Fill in the information required in the **General Data** tab. **CI for GTT** is the CI Tenant you created in [4.5](#). Check **GTT Relevant**.

Bus. Proc. Type:	ESC_DELIV
Appl. Obj. Type:	GTT_IDLV_HD
Text:	Inb. Delivery Header

General Data    Control Tables    Object Identification    Global Track & Trace Relevance    Parameter Setup

Sequencing / Destination

Seq. No.:	10
CI for GTT:	GTTAPPLOGS
CI Tenant for GTT Standard APP

Object Type:	BUS2015
BO Setup Fnct.:	

Behavior

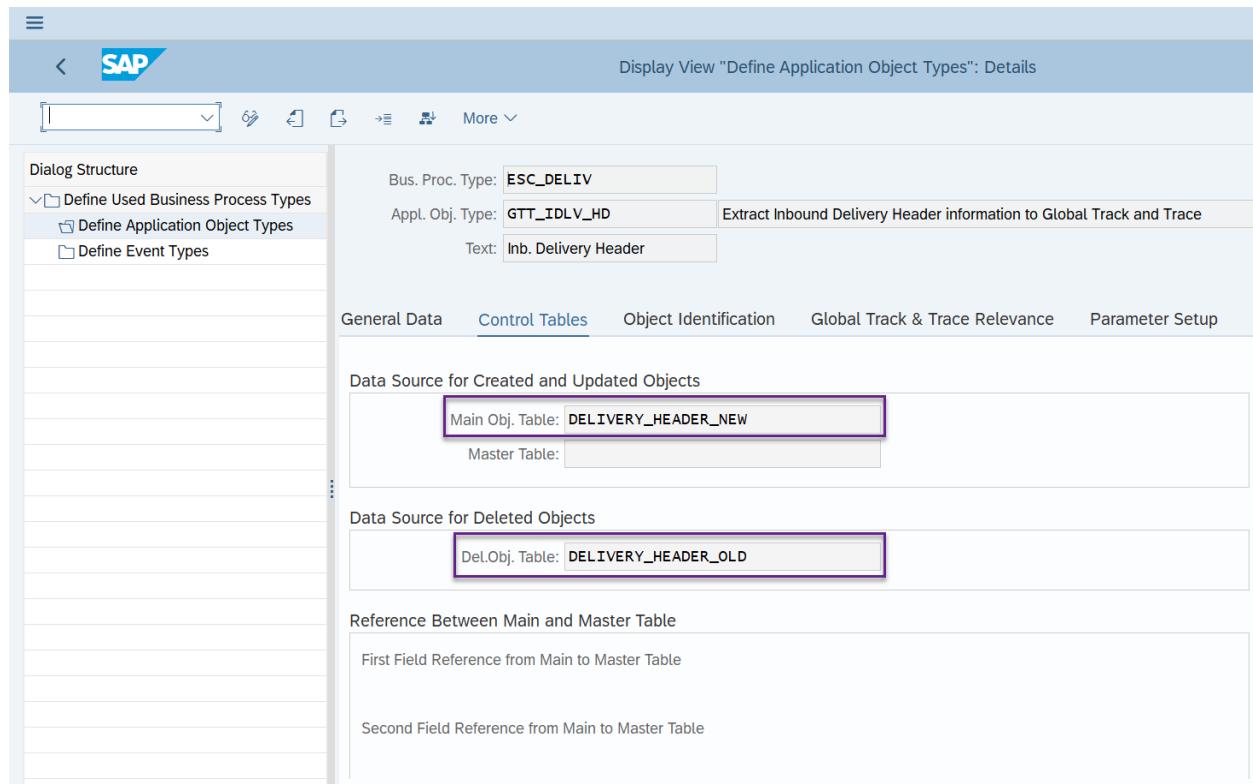

<input checked="" type="checkbox"/> GTT Relevant
<input type="checkbox"/> Stop AO Determ.
<input type="checkbox"/> Appl. Log Deact

Hint:

When you are creating Application Object Type for one Business Process Type, make sure the AOT name must be the same name defined in the corresponding model in the *Manage Models* app in GTT Version 2.

#### 4.8.5 Fill in the Main Object table and Master Table in the Control Tables tab.

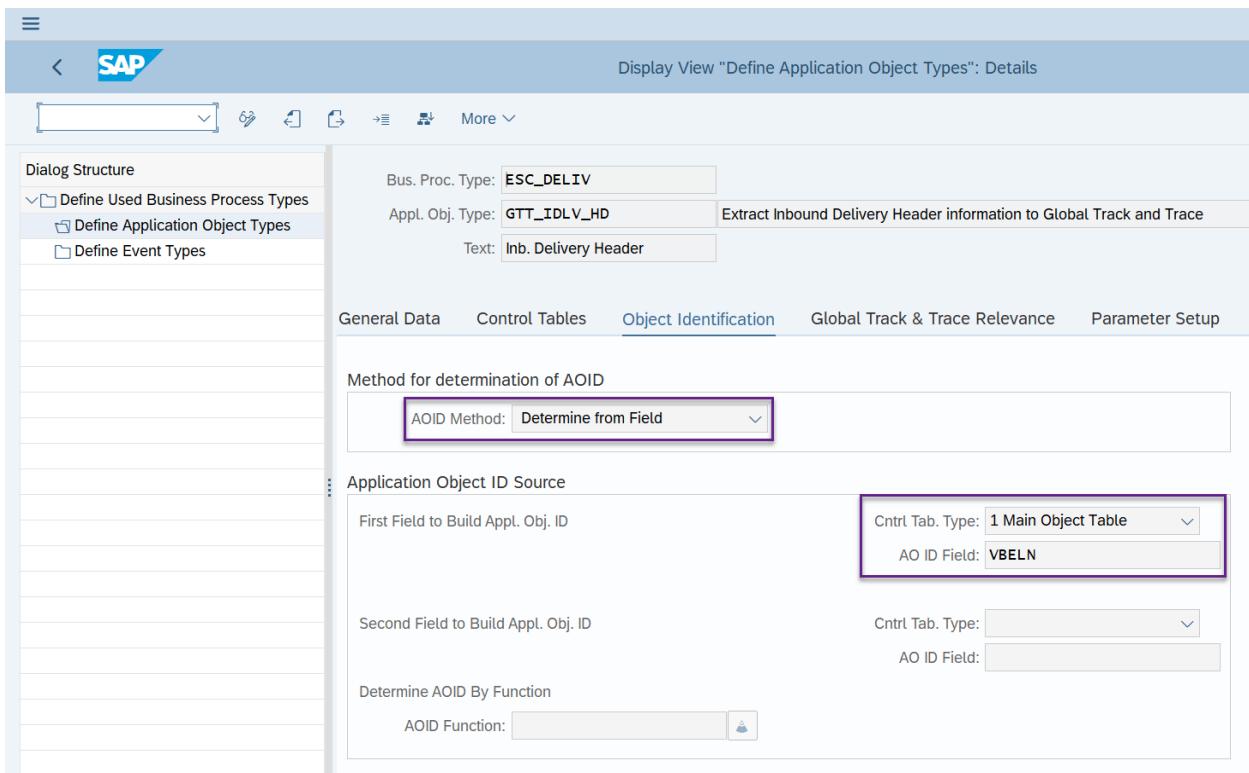

Note:

If the event type or application object type is on the header level, then you only need to assign the **Main Object Table**.

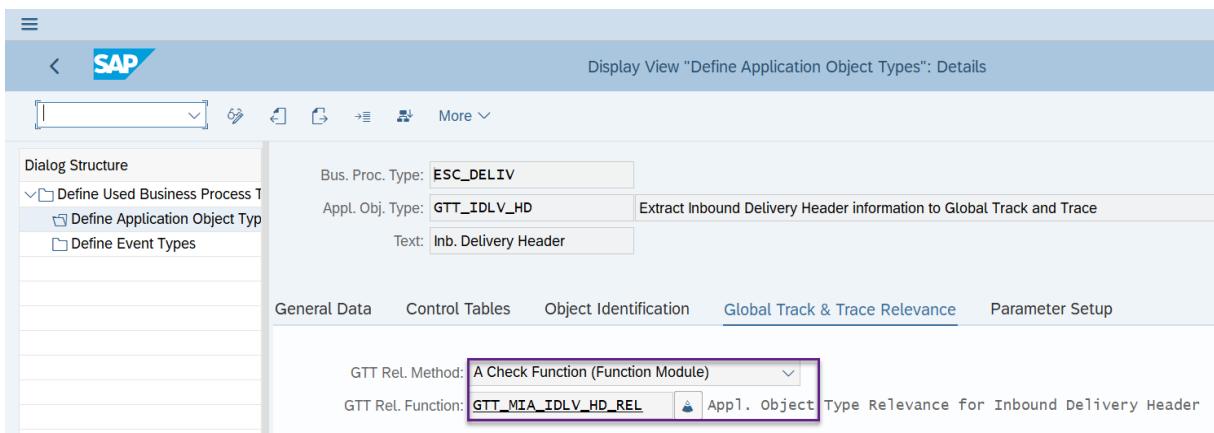

If the event type or application object type is on the item level, then you need to assign the **Main Object Table** and **Master Table**, and assign the reference between the **Main Object Table** and **Master Table**.

4.8.6 If there is no customized logic to determine the AOT ID, choose **Determine from Field**, and use the key field to fill the AO ID fields. When choosing **Determine by Function**, you must enter the customized information in the AOID function field.

4.8.7 In the **Global Track & Trace Relevance** tab, choose the **GTT Relevance Method** you need.

If you choose the **GTT Relevance Method** as *Check Function*, then you need to define a relevance function according to [4.6](#), and fill in the relevance function name here.

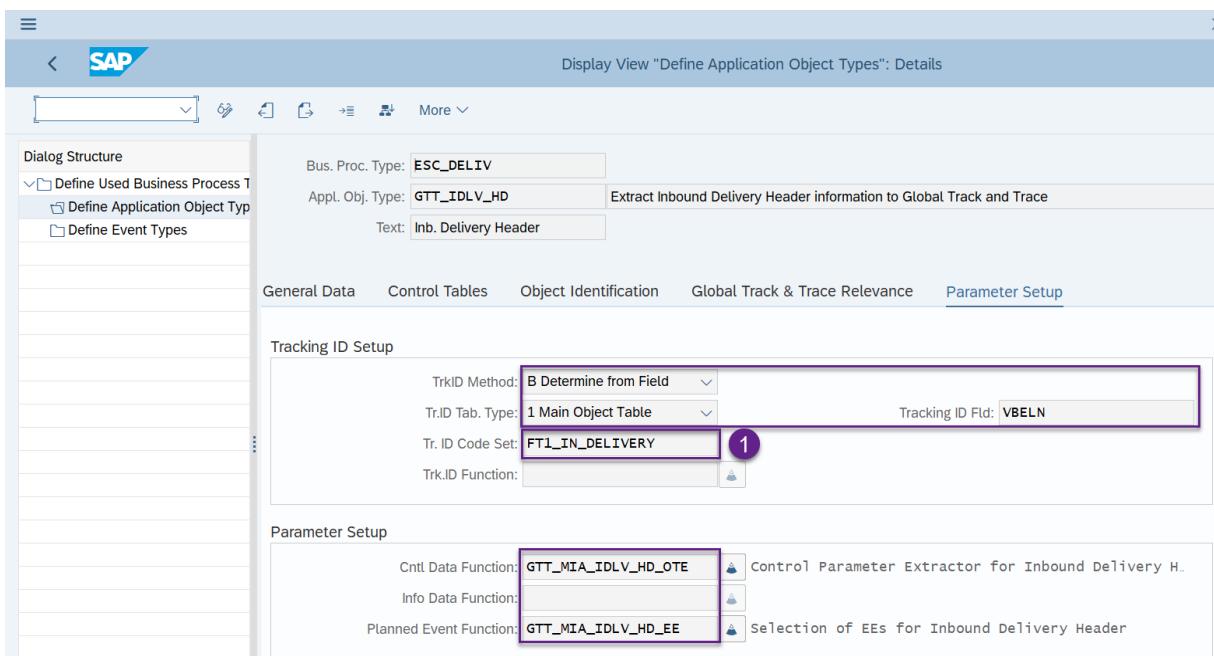

4.8.8 In the **Parameter Setup** tab, choose the **TrkID Method** as you need.

If you choose the **TrkID Method** as *Determine by Function*, then you need to define a tracking ID function according to [4.6](#), and fill in the relevance function name here.

If no customized logic exists, for **TrkID Method** choose *Determine from Field*, then you need to fill the key field and name the Code Set for the AOT.

Fill in the extractor functions for **Control Data, Info Data(optional), Planned Event**.

Click **Save**.

Hint:

In the AOT you maintained, make sure the name of Tracking ID Type is the same name defined in the corresponding process type of the model in the *Manage Models* app in GTT Version 2.

If the Tracking ID Type is determined by Field, input the value source field in the Tracking ID field, and the Code Set that refers to the Tracking ID Type for the AOT as below.

Name	Type	DPP	Grant	Readable	Writable
No data					

Name	Type	DPP	Grant	Readable	Writable
Standard Model Fields (30)					

## 4.9 Define Application Object Types for Item Level Extractor

4.9.1 As an example of AOT type's item level tracking introduction, choose the business process type ESC\_DELIV from the **Define Used Business Process Types** on the right side. Double click **Define Application Object Types**.

Bus. Proc. Type	Update Mode	BPT Process Mode	Description
ESC_DELIV	Update Task (V1)	Active	Delivery in SAP R/3 Enterprise
ESC_FT_CLEARING	Update Task (V1)	Active	FI Clearing in SAP R/3 Enterprise

4.9.2 Click **New Entries** to create a new Application Object Type.

4.9.3 Fill in the **Application Object Type** and **Text** fields.

4.9.4 Fill in the information required in the **General Data** tab. **CI for GTT** is the CI Tenant you created in [4.5](#). Check **GTT Relevant**.

Bus. Proc. Type:	ESC_DELIV	
Appl. Obj. Type:	GTT_IDLV_IT	Extract Inbound Delivery Item information to Global Track and Trace
Text:	Inb. Delivery Item

CI for GTT:	GTTAPPLOGS	CI Tenant for GTT Standard APP

Object Type:	BUS2015	InboundDelivery
BO Setup Fnct.:		

<input checked="" type="checkbox"/> GTT Relevant
<input type="checkbox"/> Stop AO Determ.
<input type="checkbox"/> Appl. Log Deact

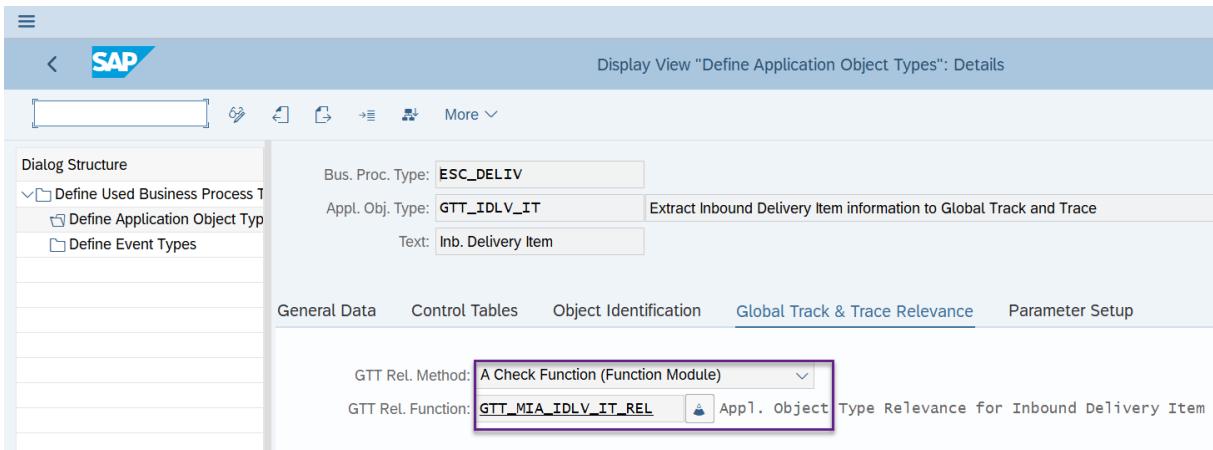

#### 4.9.5 Fill in the Main Object table and Master Table in the Control Tables tab.

The screenshot shows the SAP Fiori interface for defining application object types. The title bar reads "Display View 'Define Application Object Types': Details". The left sidebar shows a tree structure under "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs at the top: General Data, Control Tables (selected), Object Identification, Global Track & Trace Relevance, and Parameter Setup. The "Control Tables" tab contains sections for "Data Source for Created and Updated Objects" and "Data Source for Deleted Objects". The "Data Source for Created and Updated Objects" section has fields for "Main Obj. Table" (DELIVERY\_ITEM\_NEW) and "Master Table" (DELIVERY\_HEADER\_NEW). The "Data Source for Deleted Objects" section has a field for "Del.Obj. Table" (DELIVERY\_ITEM\_OLD). Below these are sections for "Reference Between Main and Master Table" and "Second Field Reference from Main to Master Table", each with uplink fields and mode/const fields. A purple box highlights the "Main Obj. Table" and "Master Table" fields.

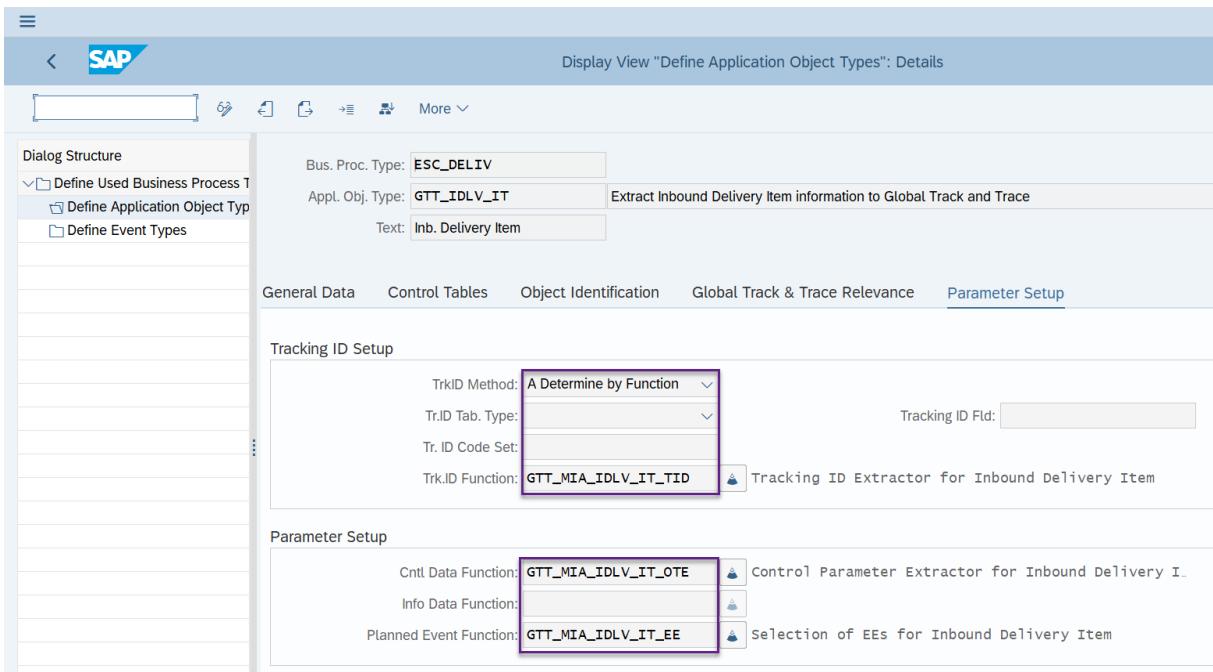

#### 4.9.6 Fill in the AOID method in the Object Identification tab.

The screenshot shows the SAP Fiori interface for defining application object types, focusing on the "Object Identification" tab. The title bar reads "Display View 'Define Application Object Types': Details". The left sidebar shows a tree structure under "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs at the top: General Data, Control Tables, Object Identification (selected), Global Track & Trace Relevance, and Parameter Setup. The "Object Identification" tab contains sections for "Method for determination of AOID" and "Application Object ID Source". The "Method for determination of AOID" section has a dropdown menu set to "Determine from Field". The "Application Object ID Source" section has two parts: "First Field to Build Appl. Obj. ID" and "Second Field to Build Appl. Obj. ID". Each part has a dropdown for "Cntrl Tab. Type" (set to "1 Main Object Table") and a field for "AO ID Field" ("VBELN" for the first, "POSNR" for the second). A purple box highlights the "Cntrl Tab. Type" and "AO ID Field" fields for both sections.

#### 4.9.7 In the Global Track & Trace Relevance tab, choose the GTT Relevance Method you need.

#### 4.9.8 In the **Parameter Setup** tab, choose the **TrkID Method** as you need.

## 4.10 Define Event Types for Header Level Extractor

4.10.1 As an example of event's header level tracking introduction, choose the business process type ESC\_MATDOC from the **Define Used Business Process Types** on the right side. Double click **Define Event Types**.

Bus. Proc. Type	Update Mode	BPT Process Mode	Description
ESC_MATDOC	Update Task (V1)	Active	Material Document in SAP R/3 Enterprise
ESC_MM_INVOICE	Update Task (V1)	Active	MM Invoice in SAP R/3 Enterprise

4.10.2 Click **New Entries** to create a new event type.

4.10.3 Fill in the **Event Type** and **Text** fields.

4.10.4 Fill in the information required in the **General Data** tab. **HCI for GTT** is the CI Tenant you created in [4.5. Event Function](#) is the extractor function you created in [4.6](#). Check **GTT Relevant**.

#### 4.10.5 Fill in the Main Object Table and Master Table in the Control Tables tab.

The screenshot shows the SAP Fiori interface for defining event types. The title bar reads "Display View 'Define Event Types': Details". The left sidebar shows "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs: "General Data", "Control Tables" (which is selected), and "Global Track & Trace Relevance". Under "Control Tables", there is a section titled "Data Source for Events" containing fields: "Main Obj. Table: MATERIAL\_HEADER" and "Master Table: [empty]". Below this are fields for "Old Main Obj. Table" and "Old Master Table", both currently empty. A section titled "Reference Between Main and Master Table" contains fields for "First Field Reference from Main to Master Table" and "Second Field Reference from Main to Master Table", both also empty.

##### **Caution:**

If the event type or application object type is on the header level, then you only need to assign the **Main Object Table**.

If the event type or application object type is on the item level, then you need to assign the **Main Object Table** and **Master Table**, and assign the reference between the **Main Object Table** and **Master Table**.

#### 4.10.6 In the Global Track & Trace Relevance tab, choose the GTT Relevance Method you need.

If you choose the **GTT Relevance Method** as *Check Function*, then you need to define a relevance function according to [4.6](#), and fill in the relevance function name here. Click **Save**.

The screenshot shows the SAP Fiori interface for defining event types, specifically on the "Global Track & Trace Relevance" tab. The title bar reads "Display View 'Define Event Types': Details". The left sidebar shows "Dialog Structure" with "Define Used Business Process Types" expanded, showing "Define Application Object Types" and "Define Event Types". The main area has tabs: "General Data", "Control Tables" (selected), and "Global Track & Trace Relevance". Under "Global Track & Trace Relevance", there is a field "GTT Rel. Method: A Check Function (Function...)" and a field "GTT Rel. Function: GTT\_MIA\_IDLV\_HD\_GR". To the right of the "GTT Rel. Function" field is a small icon with the text "Relevance function for Actu".

## 4.11 Define Event Types for Item Level Extractor

4.11.1 As an example of the event's item level tracking introduction, choose the business process type ESC\_DELIV from the **Define Used Business Process Types** on the right side. Double click **Define Event Types**.

Bus. Proc. Type	Update Mode	BPT Process Mode	Description

## 5. Configuration and Coding Guide – Advanced

### 5.1 Coding Tips for Sales Order Relevant Extractor

To send the data of sales orders and outbound deliveries to GTT, you have two options:

- Create a new sales document type “ZGTT” via TCode “VOV8” and delivery type “LBNP” via TCode “OVLK” or “0VLK”
- Replace the sales document type and delivery type in interface “ZIF\_GTT\_SOF\_CONSTANTS”.

### 5.2 Available Contexts for the Extractors’ Modules

5.2.1 In Display IMG page, click **Integration with Other SAP Components -> Interface to Global Track and Trace -> Define Application Interface**.

Choose activity **Define Business Process Types**

5.2.2 Select the **Business Process Types** to find all the context tables and their structure info.

The screenshot shows the SAP Display View "Define Business Process Types": Overview. On the left, there is a tree view under "Dialog Structure" with nodes like "Define Business Process Types" and "Define Available Application Tables". The main area is titled "Define Business Process Types" and contains a table with three columns: "Business Process Type", "Update Mde", and "Description". The "Business Process Type" column lists various codes such as EPL\_EQUIPMNT, EPL\_INSPLOT, EPL\_NOTIF, ESC\_DELIV, etc. The "Update Mde" column shows mostly "Update Task (V1)". The "Description" column provides a brief description for each entry, such as "Equipment in SAP R/3 Enterprise" for EPL\_EQUIPMNT. A purple box highlights the first few rows of the table.

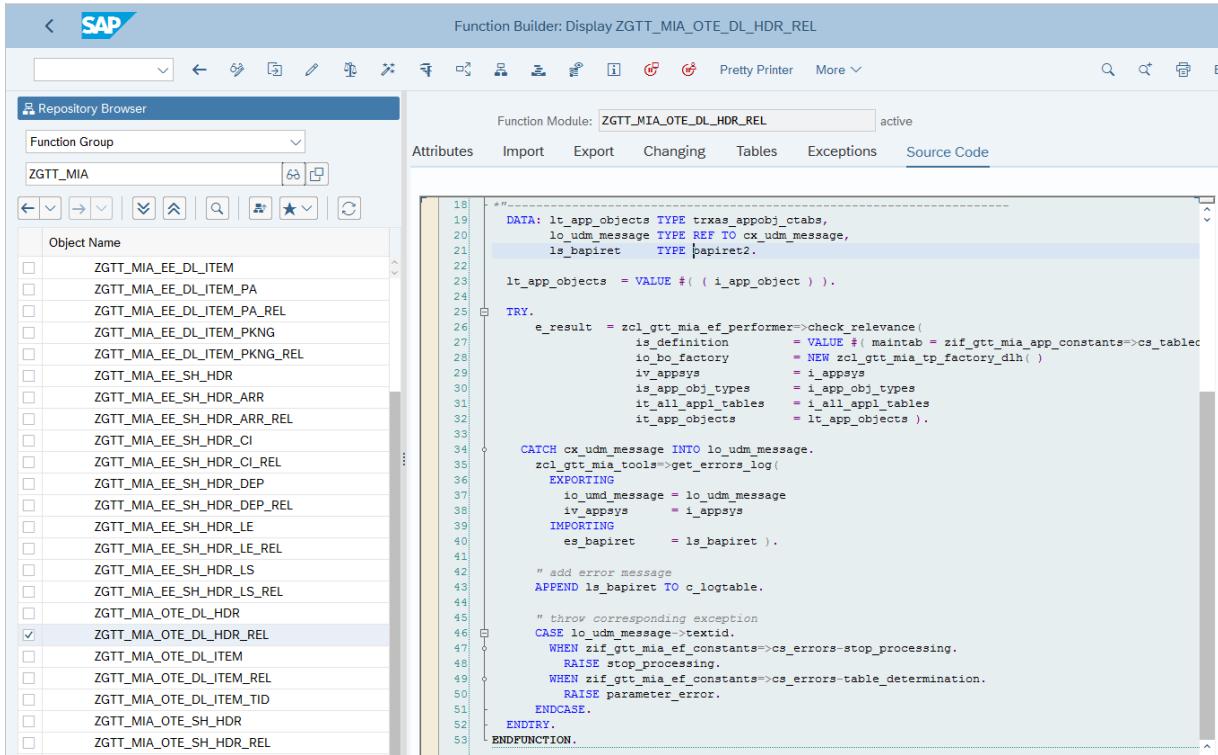

Business Process Type	Update Mde	Description
EPL_EQUIPMNT	Update Task (V1)	Equipment in SAP R/3 Enterprise
EPL_INSPLOT	Update Task (V1)	Inspection Lot in SAP R/3 Enterprise
EPL_NOTIF	Update Task (V1)	Notification in SAP R/3 Enterprise
ESC_DELIV	Update Task (V1)	Delivery in SAP R/3 Enterprise

## 5.3 Coding Tips in the GTT Relevance Function Modules

To customize the GTT relevance function modules, key points are as follows:

1. Make sure that the Main / Master tables follow the configuration of corresponding AOT or Event Type.
2. Add customization logics to determine the output parameters E\_RESULT.

See the sample code of function: ZGTT\_MIA\_OTE\_DL\_HDR\_REL.

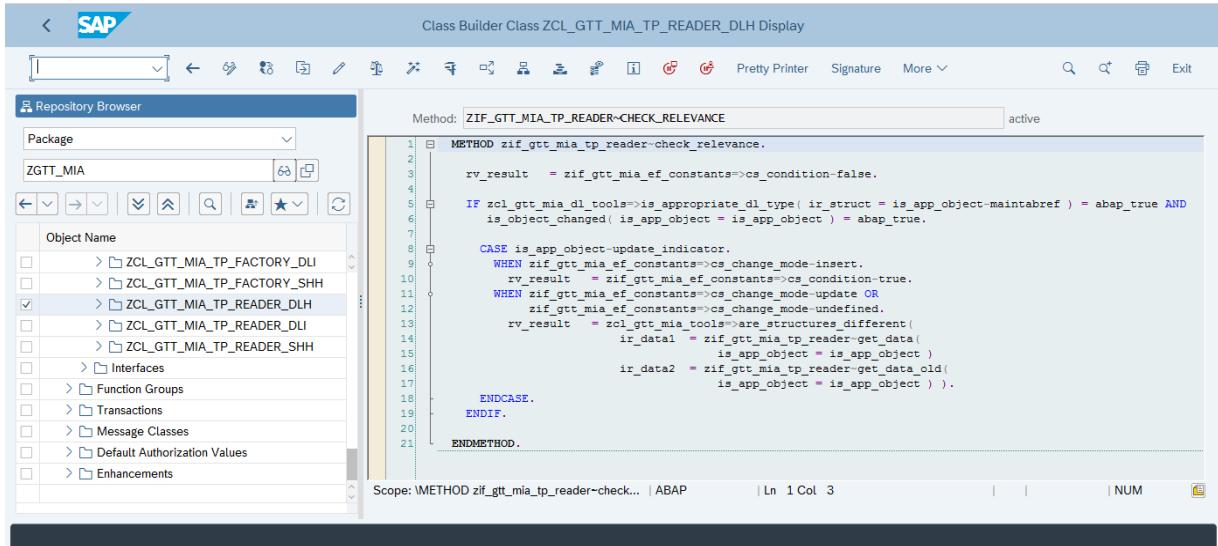

The screenshot shows the SAP Function Builder interface with the title "Function Builder: Display ZGTT\_MIA\_OTE\_DL\_HDR\_REL". The "Source Code" tab is selected. The code is as follows:

```

18  DATA: lt_app_objects TYPE txnas_apppobj_ctabs,
19    lo_udm_message TYPE REF TO cx_udm_message,
20    ls_bapiret TYPE pappiret.
21
22  lt_app_objects = VALUE #( ( i_app_object ) ).
23
24  TRY.
25    e_result = zcl_gtt_mia_ef_performer->check_relevance(
26      is_definition = VALUE #( maintab = zif_gtt_mia_app_constants->cs_tabledef ),
27      io_bo_factory = NEW zcl_gtt_mia_tp_factory_dlh( )
28      iv_apps = i_apps
29      iv_apps = i_apps
30      is_app_obj_types = i_app_obj_types
31      it_all_appl_tables = i_all_appl_tables
32      it_app_objects = it_app_objects .
33
34  CATCH cx_udm_message INTO lo_udm_message.
35    zcl_gtt_mia_tools->get_errors_log(
36      EXPORTING
37        io_udm_message = lo_udm_message
38        iv_apps = i_apps
39      IMPORTING
40        es_bapiret = ls_bapiret .
41
42    " add error message
43    APPEND ls_bapiret TO c_logtable.
44
45    " throw corresponding exception
46    CASE lo_udm_message->textid.
47      WHEN zif_gtt_mia_ef_constants->cs_errors-stop_processing.
48        RAISE stop_processing.
49      WHEN zif_gtt_mia_ef_constants->cs_errors-table_determination.
50        RAISE parameter_error.
51    ENDCASE.
52  ENDTRY.
53  ENDFUNCTION.

```

The function module uses class ZCL\_GTT\_MIA\_TP\_READER\_DLH to do the check.

The screenshot shows the SAP Class Builder interface with the title "Class Builder Class ZCL\_GTT\_MIA\_TP\_READER\_DLH Display". The "Method" dropdown is set to "ZIF\_GTT\_MIA\_TP\_READER-CHECK\_RELEVANCE". The code is as follows:

```

1  MBETHOD zif_gtt_mia_tp_reader-check_relevance.
2
3  rv_result = zif_gtt_mia_ef_constants->cs_condition-false.
4
5  IF zcl_gtt_mia_dl_tools->is_appropriate_dt_type( ir_struct = is_app_object-maintabref ) = abap_true AND
6    is_object_changed( is_app_object = is_app_object ) = abap_true.
7
8    CASE is_app_object-update_indicator.
9      WHEN zif_gtt_mia_ef_constants->cs_change_mode-insert.
10        rv_result = zif_gtt_mia_ef_constants->cs_condition=true.

13        rv_result = zcl_gtt_mia_tools->are_structures_different(
14          ir_data1 = zif_gtt_mia_tp_reader-get_data(
15            is_app_object = is_app_object )
16          ir_data2 = zif_gtt_mia_tp_reader-get_data_old(
17            is_app_object = is_app_object ) .
18
19    ENDCASE.
20  ENDIF.
21
22 ENDMETHOD.

```

## 5.4 Coding Tips in the Tracking ID Function Modules

To customize the Tracking ID function modules, key points are as follows:

1. Make sure that the Main / Master tables follow the configuration of corresponding AOT.
2. Add customization logics to fill in the output table E\_TRACKIDDATA.
3. The Tracking ID Type needs to be the same as the definition in the process type of model in the *Manage Models* app.
4. GTT V2 accepts delta transport for tracking IDs, which means only the newly created / changed / deleted tracking IDs shall be filled in, while the ones without changes need to be ignored in the logic.
5. The tracking ID for its own process type needs to be filled in for each process update.
6. In case of tracking ID deletion, the field ACTION shall be filled in with 'D'.

See sample code of function: ZGTT\_MIA\_OTE\_DL\_ITEM\_TID.

## 5.5 Coding Tips in the Control Parameter Function Modules

To customize the Control Parameter function modules, key points are as follows:

1. Make sure that the Main / Master tables follow the configuration of corresponding AOT.
2. Add customization logics to fill in the output table E\_CONTROL\_DATA.
3. GTT V2 asks for full transport for all the control parameters, which means all the fields needs to be extracted in all cases, no matter whether their values have been changed or not.
4. To fill in the composition (table) fields defined in the *Manage Models* app, use the parameter field PARAMINDEX to specify the line number. If the field is empty, GTT regards it as a simple flat field.
5. To clear a composition, fill in the key field using invalid values, for which the key attribute has been checked in the *Manage Models* app. It's not recommended to fill in a code list type field to clear a composition even if it's a key field.
6. The fields with fixed names 'ACTUAL\_BUSINESS\_DATETIME' and 'ACTUAL\_BUSINESS\_TIMEZONE' are mandatory fields to be transported for event handling sequencing in GTT Version 2.
7. The fields with fixed names 'ACTUAL\_TECHNICAL\_TIMEZONE' and 'ACTUAL\_TECHNICAL\_DATETIME' are optional and recommended for fixing IDOC sequencing issue (after object creation in S/4 actual event might be processed before object creation in GTT via TP request, which leads to an error)
8. In the *Manage Models* app, click the *IDOC Integration* tab to map the parameter names and model field names.
9. For DATE or DATETIME fields, when the source value is initial like '00000000' '0000000000000000', then only enable PARAMNAME and PARAMINDEX in the extractor code, and do not enable VALUE for IDOC sending.
10. For amount field which has reference currency, ensure to call BAPI 'BAPI\_CURRENCY\_CONV\_TO\_EXTERNAL' using the reference currency to make the amount tracked correctly by GTT Version 2. The BAPI will output the conversion result in 4 decimals as fixed, which needs additional rounding in the extractor if the corresponding field defined in the tracking model is less than 4 decimals.
11. In the shipment extractor, add the prefix LBN# into the fields SERVICE AGENT LBN ID for integration with Visibility Providers.

## 5.6 Coding Tips in the Planned Event Function Modules

To customize the Planned Event function modules, key points are as follows:

1. Make sure that the Main / Master tables follow the configuration of corresponding AOT.
2. Add customization logics to fill in the output table E\_EXPEVENTDATA.
3. By default, except that no changes are made on the model configuration, GTT Version 2 will ask for full transport for all the planned events, which means that all the events needs to be extracted in all cases, no matter whether their values have been changed. If nothing is transported, the planned events will be removed in GTT Version 2.
4. The field MILESTONE is mandatory to be transported.
5. The field EVT\_EXP\_DATETIME is optional, but needs to be filled in with relevant time zone EVT\_EXP\_TZONE together if it needs to be transported.
6. The field LOC\_ID1 is optional, but needs to be filled in with relevant location type LOCTYPE together if it needs to be transported. The values for field LOCTYPE are limited by the Manage Locations app in GTT Version 2.
7. The field LOCID2 is mandatory to specify event match key of each stop (combination of the Shipment Number and Stop ID) for shipment tracking
8. The field MILESTONENUM is recommended to specify in order to implement custom sorting logic instead of sorting by planned business datetime.

## 5.7 Coding Tips in the Event Data Function Modules

To customize the Event Data function modules, key points are as follows:

1. Make sure that the Main / Master tables follow the configuration of corresponding Event Type.
2. Add customization logic to fill in the output table CT\_TRACKINGHEADER, CT\_TRACKLOCATION, C\_EVENTID\_MAP.
3. If the event has user-defined fields in the *Manage Models* app, fill in the table CT\_TRACKPARAMETERS.
4. Add two technical parameters with fixed names 'ACTUAL\_TECHNICAL\_TIMEZONE' and 'ACTUAL\_TECHNICAL\_DATETIME' which are recommended for fixing IDOC sequencing issue (after object creation in S/4 actual event might be processed before object creation in GTT via TP request, which leads to an error)
5. If the event has reference table information, fill in the table CT\_TRACKREFERENCES.
6. The field CT\_TRACKINGHEADER-SRCCOD, SRCID, SRCTX is used for event reason transport.
7. In the *Manage Models* app, click the *IDOC Integration* tab to map the user-defined parameter names and model field names.

## 5.8 Enhancement Codes for Cross-processes Tracking

The Fulfillment Tracking apps ask for cross-processes tracking, which is used in the following cases:

1. When the inbound delivery process is updated and sent to GTT, the preceding purchase order item process, and its planned events need to be updated and sent to GTT.
2. When the outbound delivery process is updated and sent to GTT, the preceding sales order item process, and its planned events need to be updated and sent to GTT.
3. When the shipment process is updated and sent to GTT, the preceding inbound/outbound delivery and item process, and its planned events need to be updated and sent to GTT.
4. When the freight unit is updated and sent to GTT, the preceding inbound/outbound delivery and item process need to be updated and sent to GTT.

The cross-process tracking scenarios cover the following:

### **Shipment -> Inbound/Outbound Delivery and Inbound/Outbound Delivery Item:**

1. Tracking ID (Delta Transport)
  - Case: Shipment Create / Delete with Delivery
  - Case: Shipment Assign / Unassign Delivery
2. Shipment Composition (Full Transport)
  - Case: Shipment Create / Delete with Delivery
  - Case: Shipment Assign / Unassign Delivery
3. Planned Event in Delivery (Full Transport)
  - Case: Shipment Create / Delete with Delivery / with stage
  - Case: Shipment Assign / Unassign Delivery / with stage
  - Case: Stage Assign / Unassign Delivery
  - Case: Stage Insert / Delete
  - Case: Stage Location Update
  - Case: Stage Planned Datetime Update

### **Freight Unit -> Inbound/Outbound Delivery and Inbound/Outbound Delivery Item:**

1. Freight Unit Relevant
  - Case: Freight Unit Create / Delete with Delivery
2. Freight Unit Composition
  - Case: Freight Unit Create / Delete with Delivery
3. Planned Event
  - Case: Freight Unit Create / Delete with Delivery

## 5.9 Known Issue

### 5.9.1 Planned Event Extension Not Enabled

Currently, on the ERP side, the EXTENSION segment of process IDOC is not enabled for the planned event part, which means that you cannot make the user-defined fields for planned events in the *Manage Models* app.

The workaround is to make use of Control Parameter's segment in IDOC and make the field mapping on the tracked process level in the *Manage Models* app.

## Appendix One: Define the Unplanned Events for Air Booking

You need to define the following unplanned events for air booking before they can be synchronized back from GTT to TM:

- Flight Booked
- Manifest Ready
- Received from Shipper
- Consignee Notified.

To define these unplanned events, do the following:

Note: here the unplanned event "Flight Booked" is used as an example.

1. On the **Display IMG** page, click **Transportation Management-> Integration-> Tracking and Tracing of Processes and Documents-> Define Transportation Activities for Tracking and Tracing**.
2. Select **Event for Business Document** and click **New Entries**.

Event	Description	Transp Act	Stop Cat
ARRIVAL_DOOR	Arrival at Door	11	
ARRIV_DEST	Arrival at Destination	04	I S
BLOCK_FOR_EXEC	Block for Execution	99	

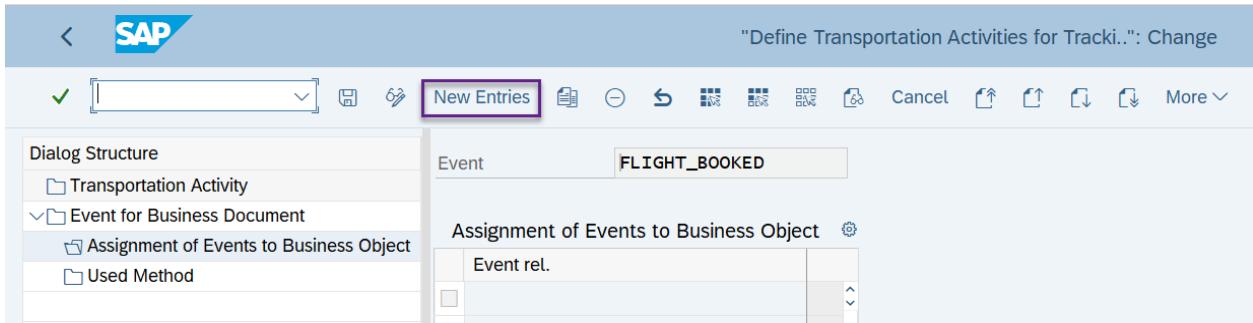

3. Input the **Event name, Description, Transp Act** and Click **Save**.

Event	Description	Transp Act	Stop Cat	Internal
FLIGHT_BOOKED	Flight Booked	99		

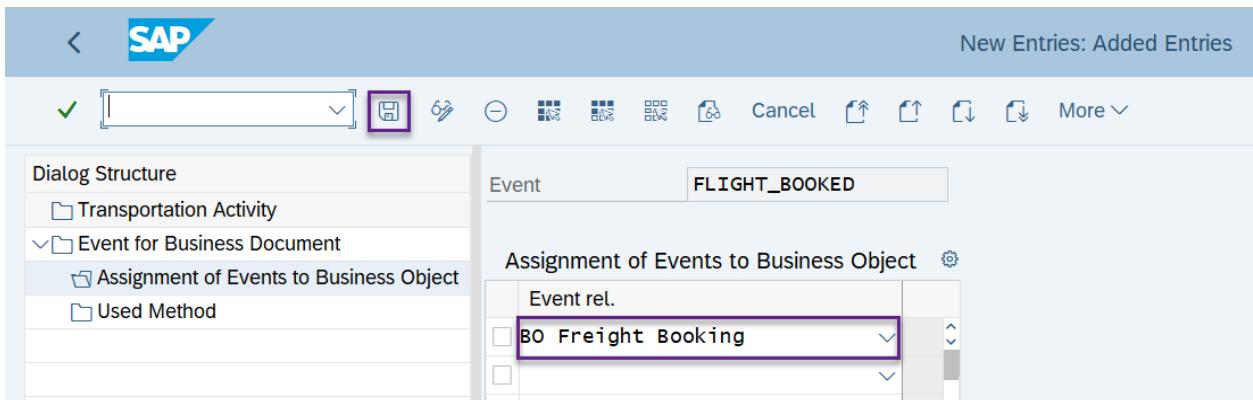

4. Select the event "FLIGHT\_BOOKED", then double click **Assignment of Events to Business Object**.

Event	Description	Transp Act	Stop Cat
FLIGHT_BOOKED	Flight Booked	99	
GEN_DISCRP	General Discrepancy	99	

5. Click **New Entries**.

6. Select "BO Freight Booking" and Click **Save**.

Results:

The configuration results for these event types should be as follows:

Event	Description	Transportation Activity	Stop Category	Event relevance for category
FLIGHT_BOOKED	Flight Booked	99	blank	BO (Freight Booking)
MANIFEST_READY	Manifest Ready	99	blank	BO (Freight Booking)
RCVD_FROM_SHIPPER	Received from Shipper	99	blank	BO (Freight Booking)
CONSIGNEE_NOTIFIED	Consignee Notified	99	blank	BO (Freight Booking)

Now you can go on to configure for synchronizing these unplanned events back to TM. For configuration details, see [Synchronize Actual Events Back to TM System](#). If the events still cannot be synchronized back to TM, please check the SAP Note [3010748 - Allow unexpected events without location reference in TransportationEventBulkNotification](#).

## Appendix Two: FAQs

This chapter provides you with answers to questions commonly asked about the configuration.

**Q1: After the configuration of GTT and SAP TM, we found that the freight unit / freight order / freight booking IDOC cannot be sent to GTT, how can we do the troubleshooting?**

### Step 1: Check the integration of SAP TM and SAP EM

The Post Processing Framework (PPF) is used to trigger the communication from SAP Transportation Management (SAP TM) to SAP Event Management (SAP EM). You need to maintain the output management adapter for this communication to work.

- a. Log onto SAP Business Client, enter T-code SPRO and then click **SAP Reference IMG** to open the **Display IMG** page. Go to node **Cross-Application Components -> Processes and Tools for Enterprise Applications -> Reusable Objects and Functions for BOPF Environment -> PPF Adapter for Output Management -> Maintain Output Management Adapter Settings**.
- b. In the **Dialog Structure** section, choose **Direct Output Agents (w/o PPF & w/o History)**.
- c. Choose the entry shown in the screenshot and enable it.

The screenshot shows the SAP Reference IMG interface with the following details:

**Change View "Direct Output Agents (w/o PPF & w/o History)": Overview**

**Dialog Structure:**

- PPF Output Agents for BO Nodes
- Assign PPF Profiles
- Action Settings
  - Processing Type Settings
  - Assign Transient Actions
- Direct Output Agents (w/o PPF & w/o History)** (highlighted in yellow)
- Nodes for Before Image

**Table View:**

Business Object	Node	Agent Name	Description	Enable	Child Chg Sync/Async
/SCMTMS/TOR	ROOT	SEND_EM_DATA_FROM_TOR	Call SAP EM (recommended, check note 1842397 for details)	<input checked="" type="checkbox"/>	B Has Uncritical o/p: Process after Commit (background)

- Nodes for Before Image

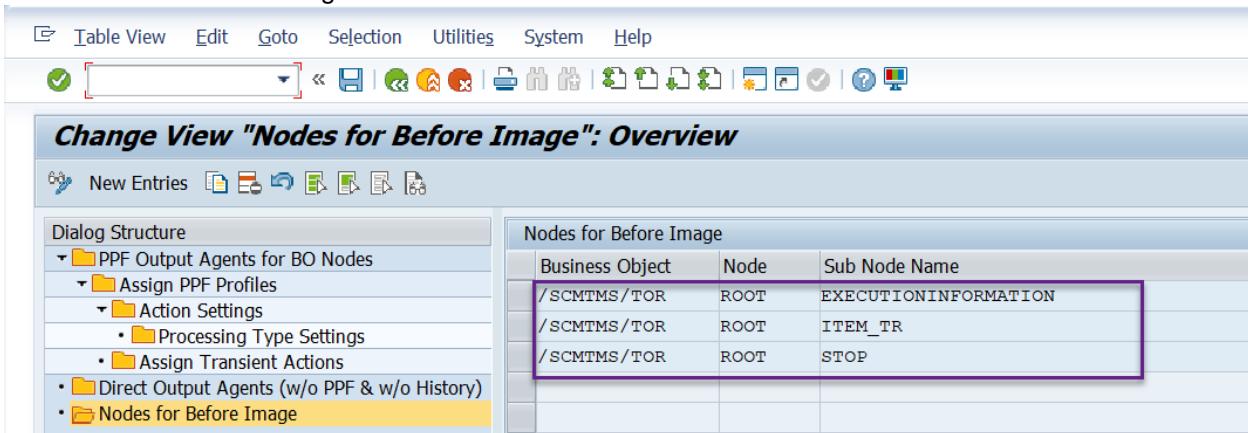

**Fields:**

- Business Object: /SCMTMS/TOR
- Node: ROOT
- Agent Name: SEND\_EM\_DATA\_FROM\_TOR

**Direct Output Agents (w/o PPF & w/o History):**

- Description: Call SAP EM (recommended, check note 1842397 for details)

- Processor Class: /SCMTMS/CL\_OUTMGMT\_EXEC\_TOR
- User-Def. Func. 1:
- User-Def. Func. 2:
- User-Def. Func. 3:

- d. In the **Dialog Structure** section, choose **Nodes for Before Image**.  
e. Create the following three entries:

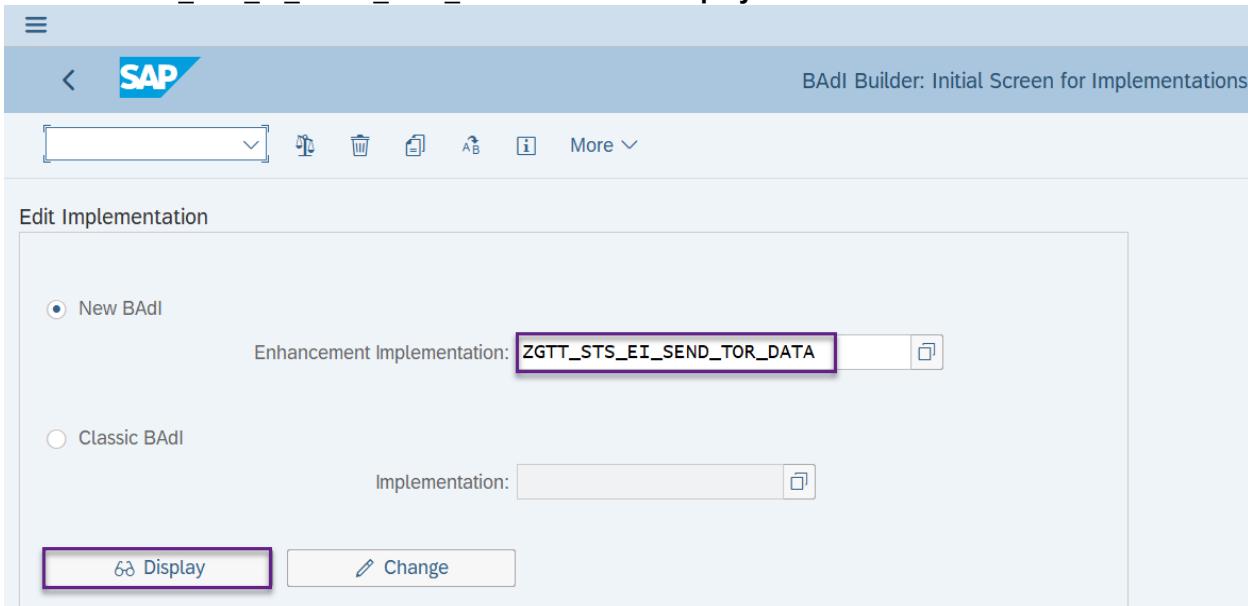

The screenshot shows the SAP dialog structure for 'Nodes for Before Image'. The left pane displays a tree view of PPF Output Agents for BO Nodes, with 'Nodes for Before Image' selected. The right pane shows a table titled 'Nodes for Before Image' with three entries:

Business Object	Node	Sub Node Name
/SCMTMS/TOR	ROOT	EXECUTIONINFORMATION
/SCMTMS/TOR	ROOT	ITEM_TR
/SCMTMS/TOR	ROOT	STOP

## Step 2: Check the trigger point of the generation of freight unit / freight order / freight booking IDOC

- a. Go to T-code SE19, fill in the **Enhancement Implementation** with "ZGTT\_STS\_EI\_SEND\_TOR\_DATA" and click **Display**.

The screenshot shows the SAP BAdI Builder interface. The title bar reads 'BAdI Builder: Initial Screen for Implementations'. The main area is titled 'Edit Implementation' and contains two radio button options: 'New BAdI' (selected) and 'Classic BAdI'. Under 'New BAdI', there is a field 'Enhancement Implementation:' containing the value 'ZGTT\_STS\_EI\_SEND\_TOR\_DATA'. At the bottom are two buttons: 'Display' (highlighted with a purple border) and 'Change'.

- b. Ensure that the **Enhancement Implementation** “ZGTT\_STS\_EI\_SEND\_TOR\_DATA” is active. In the **Enh. Implementation Elements** tab, ensure that **BAdl Implementation** “ZGTT\_STS\_BI\_SEND\_TOR\_DATA” is active.

- In the **Execution Settings**, the **Execution Tracking Relevance** field is set to “Execution Tracking with External Event Management”.

#### Execution Settings

The screenshot shows the SAP Execution Settings dialog. The 'Execution Tracking Relevance' dropdown is highlighted with a purple border and contains the value '3 Execution Tracking with External Event M...'. Other fields include 'Check Condition "Ready for Exec":' (empty), 'Display Mode for Execution Tab:' (set to 'Actual Events from TM and EM, Expected ...'), 'Expected Event for Goods Issue:' (empty), 'Expected Event for Goods Receipt:' (empty), 'Last Exp. Event:' (set to 'ARRIV\_DEST'), and a checkbox for 'Immediate Processing' which is unchecked. Below these are sections for 'Execution Propagation Mode:' (set to 'Standard Propagation') and 'Discrepancy Profile:' (empty).

#### Step 5: Check the freight booking type settings

- a. On the IMG, go to **SAP Transportation Management > Transportation Management > Freight Order Management > Freight Booking > Define Freight Booking Types**.
- b. In the table, open the applicable freight booking type to be tracked with SAP Event Management.
  - In the **Integration Settings**, fill in the **Application Object Type** field as follows:

## Step 6: Check the freight order / freight booking master data

To send freight orders or freight bookings to GTT, do the following:

- Assign the carrier.
- Change the execution status.
  - For freight orders: in the **Execution Status** tab on the top, change the **Execution Status** to "Set to Ready for Transportation Execution" or "Set to In Execution".

The screenshot shows the SAP Fiori application for editing a GTT Standard Freight Order. The main screen displays various tabs like General Data, Business Partner, Items, etc. A context menu is open over the 'Carrier' field in the General Information section. The menu includes options for setting execution statuses (Ready for Transportation Execution, In Execution) and load plan statuses (Stop, Packaging, Load Planning). Other menu items like Fixing, Customs, and Settlement are also visible. The 'Carrier' field is set to 'LBN\_CAR100'.

- For freight bookings:
  - Air booking: in the **Execution Status** tab on the top, change the **Execution Status** to "Set to MAWB Finalized" or "Set to In Execution".

The screenshot shows the SAP interface for editing a GTT Standard Air Booking. The 'Execution' tab is selected. A context menu is open at the top right, with the 'Set to In Execution' option highlighted.

- Ocean booking: in the **Execution Status** tab on the top, change the **Execution Status** to "Set to Ready for Transportation Execution" or "Set to In Execution".

The screenshot shows the SAP interface for editing a GTT Standard Ocean Booking. The 'Execution' tab is selected. A context menu is open at the top right, with the 'Set to In Execution' option highlighted.

## Q2: How to add customized planned event types for GTT?

Suppose you want to add the planned event type "picking complete" for the outbound delivery tracked process, do the following:

### Step 1: Create a planned event type in the GTT standard model "gttft1" in the Manage Models app

- Launch the Manage Models app and go to the GTT standard model "gttft1".
- In the **Event Type Pool** tab, click **Create** and fill in the event information in the dialogue. For details, see "4.7.1 Create Event Type" section in [Guide for Model Administrators](#).
- Assign the newly created event type to the Outbound Delivery tracked process.
  - In the **Tracked Process** tab, choose **Admissible Planned Events** from the dropdown list on the right and click **Add**.
  - In the **Details** tab of the dialogue, choose the **Event Type** that you created from the dropdown list and fill in the rest of information.
- Configure the IDOC mapping
  - Click **Edit** on the top. In the **IDOC Integration** tab, for **Tracked Process** field, choose "OutboundDelivery" from the dropdown list.
  - Under **Tracked Process / Events**, fill in **IDOC** and **Event Code** for the newly created event type.

Note: the event code must start with "ZZ".
- Save your changes and click **Deploy** on the top right to deploy the model. Once the model is successfully deployed, you can see **Active** on the model card with its last operation status "Deployment Success".

## **Step 2:** Add the ABAP Implementation Code

- a. Navigate to the function module “ZGTT\_SSOF\_EE\_DE\_HD (Selection of EEs for Outbound Delivery Header)” in the system.
- b. Add the planned event type that you created in the Manage Models app as milestone event. For coding tips, see chapter [5.6](#) in this guide.

Note: when you add the planned event type, remember that the event name here must be the same as the event code that you previously maintained in the IDOC mapping.
